For your information

Main Owner's Manual

Please note that this manual applies to all models and explains all equipment, including options. Therefore, you may find explanations for equipment not installed on your vehicle and the illustrations used may differ from your vehicle.

All specifications provided in this manual are current at the time of printing. Over time, your vehicle may receive updates that modify the vehicle and make material in this manual incomplete and/or inaccurate. Because of Toyota's interest in continual product improvement, Toyota reserves the right to make changes to this manual at any time without notice.

If Toyota chooses to update the manual, updated versions can be viewed by selecting your vehicle by model and year at the following URL or on your mobile device if you have access to the Toyota app.

www.toyota.com/owners

Accessories, spare parts and modification of your Toyota

A wide variety of non-genuine spare parts and accessories for

Toyota vehicles are currently available in the market. You should know that Toyota does not warrant these products and is not responsible for their performance, repair, or replacement, or for any damage they may cause to, or adverse effect they may have on, your Toyota vehicle.

This vehicle should not be modified with non-genuine Toyota products. Modification with non-genuine Toyota products could affect its performance, safety or durability, and may even violate governmental regulations. In addition, damage or performance problems resulting from the modification may not be covered under warranty.

Also, remodeling like this will have an effect on advanced safety equipment such as Toyota Safety Sense and there is a danger that it will not work properly or the danger that it may work in situations where it should not be working.

Cyber Attack Risk

Installing electronic devices and radios increases the risk of cyber attacks through the installed parts, which may lead to unexpected accidents and leakage of personal information. Toyota does not make any guarantees for problems caused

by installing non-genuine Toyota products.

Installation of a mobile two-way radio system

The installation of a mobile two-way radio system in your vehicle could affect electronic systems such as:

- Fuel cell system
- Toyota Teammate Advanced Drive
- Toyota Safety Sense 2.5+ with Teammate
- Toyota Safety Sense 3.0
- Anti-lock brake system
- Vehicle dynamics integrated management
- SRS airbag system
- Seat belt pretensioner system

Be sure to check with your Toyota dealer for precautionary measures or special instructions regarding installation of a mobile two-way radio system.

High voltage parts and cables on the fuel cell electric vehicles emit approximately the same amount of electromagnetic waves as the conventional gasoline powered vehicles or home electronic appliances despite of their electromagnetic shielding.

Unwanted noise may occur in the reception of the mobile two-way radio.

Vehicle data recording (vehicles without Toyota Teammate Advanced Drive)

This vehicle is equipped with sophisticated computers that record certain data regarding vehicle controls and operations.

■ Data recorded by the computers*1

*1: The recorded data varies according to the vehicle grade level and options with which it is equipped. Certain data, such as the following, is recorded depending on the operation timing and status of each function.

- Basic vehicle behavior related data (electric motor speed, accelerator/brake pedal operation, vehicle speed, etc.)
- Operating state of the driving support systems (recorded during system operation, includes basic vehicle behavior related data)
- Driving support system sensor data
- Image data (images from the front, rear, vehicle periphery, and driver monitor cameras)*2

*2: The vehicle has multiple cameras. For details on from which cameras images are recorded, contact your Toyota dealer.

- Location information

These computers do not record

conversations, sounds, or images of the inside of the vehicle.

Also, personal information which may be used to identify the owner of the vehicle (name, gender, age, etc.) is not recorded.

■ **Usage of recorded data and personal information by the Toyota Safety Sense 3.0**

The operating state of each system, data from each sensor, image data (images from the front/rear cameras), and position information is recorded by the Toyota Safety Sense 3.0 in the following situations. Toyota obtains this information when the vehicle is brought to the dealership or when sent to the Toyota servers.

- In certain collisions or collision-like situations
- When driving on roads with certain traffic situations, such as congestion, poor road surfaces, poor weather, etc.
- When driving on certain roads, such as roads which were recently opened or extended
- After the fuel cell system is started, for a certain amount of time

To learn more about the vehicle data collected, used and shared by Toyota, please visit <http://www.toyota.com/privacyvts/>.

■ **Data provision and use purpose by third parties**

“Data recorded by the computers may be used for collision analysis, malfunction diagnosis, automated driving, advanced safety and map related technologies (technology, product development, product improvement, etc.) and products and services which use data (maps used for automated driving and advanced safety technologies, driving condition analysis, analysis of the driving environment, such as road infrastructure, traffic condition communication, etc. Herein referred to as “individual services”).

Also, this data may be used for customer support related to a collision, collision analysis or resolution.

In situations such as the following, Toyota may disclose the recorded data to a third party:

- When the consent of the vehicle owner (or the lessee if the vehicle is leased) has been given
- When officially requested by the police, a court of law or a government agency
- When it is to be used by Toyota in a lawsuit
- When data is to be used research purposes after processing so that the data is not tied to a specific vehicle or

vehicle owner

In addition to the above, Toyota may disclose the data recorded by the Toyota Safety Sense 3.0 to a third party in the following situations:

- When separate consent of the vehicle owner (or the lessee if the vehicle is leased) has been given. This includes situations when the user subscribes to an individual service which is provided by a second party and uses vehicle recorded data, where the provider has obtained the user's consent for providing data to a third party
- When providing data to a company involved in autonomous driving software, etc. for the purpose of research and development (technology, product development, product improvement, etc.) of automated driving, advanced safety and map related technologies
- When providing image data and position information to a company involved in map creation, etc. for the purpose of research and development map related technologies
- When providing image data and position information to a local government for the purpose of road maintenance, etc.
- When providing processed image data and position information to traffic condition communication individual services
- When providing image data from near a fire, or other area that emergency services are dispatched, to the fire department of a local government which has entered a separate contract with Toyota

Image information recorded by the vehicle can be erased by your Toyota dealer.

The image recording function can be disabled. However, if the function is disabled, data from when systems operate will not be available.

If you wish to stop the collection of Toyota Safety Sense 3.0 data by the Toyota servers for the purpose of research and development and provision to individual services, contact your Toyota dealer.

Vehicle data recording (vehicles with Toyota Teammate Advanced Drive)

The vehicle is equipped with sophisticated computers that will record certain data, such as:

- Engine speed / Electric motor speed (traction motor speed)
- Accelerator status
- Brake status
- Vehicle speed
- Operation status of the driving

assist systems

- Images from the cameras

Your vehicle is equipped with cameras. Contact your Toyota dealer for the location of recording cameras.

The recorded data varies according to the vehicle grade level and options with which it is equipped.

These computers do not record conversations or sounds, and only record images outside of the vehicle in certain situations.

- Data Transmission

Your vehicle may transmit the data recorded in these computers to Toyota without notification to you.

- Data usage

Toyota may use the data recorded in this computer to diagnose malfunctions, conduct research and development, and improve quality.

Toyota will not disclose the recorded data to a third party except:

- With the consent of the vehicle owner or with the consent of the lessee if the vehicle is leased
- In response to an official request by the police, a court of law or a government agency
- For use by Toyota in a lawsuit
- For research purposes where the data is not tied to a specific vehicle or vehicle owner
- Recorded image information can be erased by your Toyota dealer.

The image recording function can

be disabled. However, if the function is disabled, data from when the system operates will not be available.

- To learn more about the vehicle data collected, used and shared by Toyota, please visit www.toyota.com/privacyvts/.

Usage of data collected through Safety Connect (U.S.mainland only)

If your Toyota has Safety Connect and if you have subscribed to those services, please refer to the Safety Connect Telematics Subscription Service Agreement for information on data collected and its usage.

- To learn more about the vehicle data collected, used and shared by Toyota, please visit www.toyota.com/privacyvts/.

Statement on Warranty Coverage for Aftermarket and Recycled Parts (For U.S. Owners)

The Magnuson-Moss Warranty Act, 15 U.S.C. s.2301 et seq., makes it illegal for motor vehicle manufacturers to void a motor vehicle warranty or deny warranty coverage solely because an aftermarket or recycled part has been used to repair the vehicle or someone other than the authorized service provider

performed service on the vehicle. This provision does not apply to a new motor vehicle purchased solely for commercial or industrial use.

Under federal law, a manufacturer may deny warranty coverage and charge for repairs to a vehicle if it is discovered that an aftermarket or recycled part installed on the vehicle is defective or was installed incorrectly and caused damage to another part of the vehicle otherwise covered under warranty. The Federal Trade Commission requires that a manufacturer demonstrate that an aftermarket or recycled part or service performed by a person other than an authorized service provider caused damage to another part of the vehicle otherwise covered under warranty before denying warranty coverage. Additionally, federal law allows a manufacturer to void a motor vehicle warranty or deny warranty coverage if the manufacturer provides the article or service to consumers free of charge under the warranty or the manufacturer has secured a waiver from the Federal Trade Commission.

Toyota Teammate Advanced Drive data handling

When using Advanced Drive, refer to the subscription service contract or “Toyota Teammate Advanced Drive OWNER’S MANUAL” for details about recorded data and its use.

Event data recorder

This vehicle is equipped with an event data recorder (EDR). The main purpose of an EDR is to record, in certain crash or near crash-like situations, such as an air bag deployment or hitting a road obstacle, data that will assist in understanding how a vehicle’s systems performed. The EDR is designed to record data related to vehicle dynamics and safety systems for a short period of time, typically 30 seconds or less.

The EDR in this vehicle is designed to record such data as:

- How various systems in your vehicle were operating;
- Whether or not the driver and passenger safety belts were buckled/fastened;
- How far (if at all) the driver was depressing the accelerator and/or brake pedal; and,
- How fast the vehicle was traveling.

These data can help provide a better understanding of the circumstances in which crashes and injuries occur.

NOTE: EDR data are recorded by your vehicle only if a non-trivial crash situation occurs; no data are recorded by the EDR under normal driving conditions and no personal data (e.g., name, gender, age, and crash location) are recorded. However, other parties, such as law enforcement, could combine the EDR data with the type of personally identifying data routinely acquired during a crash investigation.

To read data recorded by an EDR, special equipment is required, and access to the vehicle or the EDR is needed. In addition to the vehicle manufacturer, other parties, such as law enforcement, that have the special equipment, can read the information if they have access to the vehicle or the EDR.

- **Disclosure of the EDR data**

Toyota will not disclose the data recorded in an EDR to a third party except when:

- An agreement from the vehicle's owner (or the lessee for a leased vehicle) is obtained
- In response to an official request by the police, a court of law or a government agency
- For use by Toyota in a lawsuit

- However, if necessary, Toyota may:

- Use the data for research on vehicle safety performance
- Disclose the data to a third party for research purposes without disclosing information about the specific vehicle or vehicle owner

Scrapping of your Toyota

The SRS airbag, seat belt pretensioner devices and Pop Up Hood system in your Toyota contain explosive chemicals. If the vehicle is scrapped with the airbags, seat belt pretensioners and Pop Up Hood micro gas generators left as they are, this may cause an accident such as fire. Be sure to have the systems of the SRS airbag, seat belt pretensioner and Pop Up Hood micro gas generators removed and disposed of by a qualified service shop or by your Toyota dealer before you scrap your vehicle.

Perchlorate Material

Special handling may apply, See www.dtsc.ca.gov/hazardouswaste/perchlorate.

Your vehicle has components that may contain perchlorate. These components may include airbags, seat belt pretensioners, Pop Up Hood system, wireless remote control batteries,

and the batteries in the tire pressure warning valve and transmitters.

Toyota Teammate Advanced Drive

For information regarding Advanced Drive, refer to “Toyota Teammate Advanced Drive OWNER’S MANUAL” at Toyota.com.

The word “QR Code” is registered trademark of DENSO WAVE INCORPORATED in Japan and other countries.

! WARNING

■ General precautions while driving

Driving under the influence: Never drive your vehicle when under the influence of alcohol or drugs that have impaired your ability to operate your vehicle. Alcohol and certain drugs delay reaction time, impair judgment and reduce coordination, which could lead to an accident that could result in death or serious injury.

Defensive driving: Always drive defensively. Anticipate mistakes that other drivers or pedestrians might make and be ready to avoid accidents.

Driver distraction: Always give your full attention to driving. Anything that distracts the driver, such as adjusting controls, talking on a cellular phone or reading can result in a collision with resulting death or serious injury to you, your occupants or others.

■ General precaution regarding children’s safety

Never leave children unattended in the vehicle, and never allow children to have or use the key.

Children may be able to start the vehicle or shift the vehicle into neutral. There is also a danger that children may injure themselves by playing with the windows, the electronic sunshade, or other features of the vehicle. In addition, heat build-up or extremely cold temperatures inside the vehicle can be fatal to children.

Reading this manual

Explains symbols used in this manual.

Symbols in this manual

Symbols	Meanings
	WARNING: Explains something that, if not obeyed, could cause death or serious injury to people.
	NOTICE: Explains something that, if not obeyed, could cause damage to or a malfunction in the vehicle or its equipment.
1 2 3...	Indicates operating or working procedures. Follow the steps in numerical order.

Symbols in illustrations

Symbols	Meanings
	Indicates the action (pushing, turning, etc.) used to operate switches and other devices.
	Indicates the outcome of an operation (e.g. a lid opens).

Symbols	Meanings
	Indicates the component or position being explained.
	Means Do not , Do not do this , or Do not let this happen .

1

For safety and security

Before driving

Observe the following before starting off in the vehicle to ensure safety of driving.

Installing floor mats

Use only floor mats designed specifically for vehicles of the same model and model year as your vehicle. Fix them securely in place onto the carpet.

- 1 Insert the retaining hooks (clips) into the floor mat eyelets.

- 2 Turn the upper knob of each retaining hook (clip) to secure the floor mats in place.

Always align the \triangle marks **A**.

The shape of the retaining hooks (clips) may differ from that shown in the illustration.

WARNING

Observe the following precautions. Failure to do so may cause the driver's floor mat to slip, possibly interfering with the pedals while driving. An unexpectedly high speed may result or it may become difficult to stop the vehicle. This could lead to an accident, resulting in death or serious injury.

When installing the driver's floor mat

- Do not use floor mats designed for other models or different model year vehicles, even if they are Toyota Genuine floor mats.
- Only use floor mats designed for the driver's seat.
- Always install the floor mat securely using the retaining hooks (clips) provided.
- Do not use two or more floor mats on top of each other.
- Do not place the floor mat bottom-side up or upside-down.

⚠ WARNING**■ Before driving**

- Check that the floor mat is securely fixed in the correct place with all the provided retaining hooks (clips). Be especially careful to perform this check after cleaning the floor.

- With the fuel cell system stopped and the shift position in P, fully depress each pedal to the floor to make sure it does not interfere with the floor mat.

For safe driving

For safe driving, adjust the seat and mirror to an appropriate position before driving.

Correct driving posture

- A** Adjust the angle of the seat-back so that you are sitting straight up and so that you do not have to lean forward to steer. (→P.181)
- B** Adjust the seat so that you can depress the pedals fully and so that your arms bend slightly at the elbow when gripping the steering wheel. (→P.181)
- C** Lock the head restraint in place with the center of the head restraint closest to the top of your ears. (→P.182)
- D** Wear the seat belt correctly. (→P.33)

1

For safety and security

**WARNING****■ For safe driving**

Observe the following precautions.

Failure to do so may result in death or serious injury.

- Do not adjust the position of the driver's seat while driving. Doing so could cause the driver to lose control of the vehicle.
- Do not place a cushion between the driver or passenger and the seatback. A cushion may prevent correct posture from being achieved, and reduce the effectiveness of the seat belt and head restraint.
- Do not place anything under the front seats. Objects placed under the front seats may become jammed in the seat tracks and stop the seat from locking in place. This may lead to an accident and the adjustment mechanism may also be damaged.
- Always observe the legal speed limit when driving on public roads.
- When driving over long distances, take regular breaks before you start to feel tired. Also, if you feel tired or sleepy while driving, do not force yourself to continue driving and take a break immediately.

child becomes large enough to properly wear the vehicle's seat belt. (→P.64)

Adjusting the mirrors

Make sure that you can see backward clearly by adjusting the inside rear view mirror (if equipped), Digital Rear-view Mirror (if equipped) and outside rear view mirrors properly. (→P.185, 186, 194)

Correct use of the seat belts

Make sure that all occupants are wearing their seat belts before driving the vehicle. (→P.33)

Use a child restraint system appropriate for the child until the

Seat belts

Make sure that all occupants are wearing their seat belts before driving the vehicle.

WARNING

Observe the following precautions to reduce the risk of injury in the event of sudden braking, sudden swerving or an accident. Failure to do so may cause death or serious injury.

■ Wearing a seat belt

- Ensure that all passengers wear a seat belt.
- Always wear a seat belt properly.
- Each seat belt should be used by one person only. Do not use a seat belt for more than one person at once, including children.
- Toyota recommends that children be seated in the rear seat and always use a seat belt and/or an appropriate child restraint system.
- To achieve a proper seating position, do not recline the seat more than necessary. The seat belt is most effective when the occupants are sitting up straight and well back in the seats.
- Do not wear the shoulder belt under your arm.
- Always wear your seat belt low and snug across your hips.

■ Pregnant women

Obtain medical advice and wear the seat belt in the proper way. (→P.34)

Women who are pregnant should position the lap belt as low as possible over the hips in the same manner as other occupants, extending the shoulder belt completely over the shoulder and avoiding belt contact with the rounding of the abdominal area.

If the seat belt is not worn properly, not only the pregnant woman, but also the fetus could suffer death or serious injury as a result of sudden braking or a collision.

■ People suffering illness

Obtain medical advice and wear the seat belt in the proper way. (→P.34)

■ When children are in the vehicle

→P.71

■ Seat belt damage and wear

- Do not damage the seat belts by allowing the belt, plate, or buckle to be jammed in the door.

⚠ WARNING

- Inspect the seat belt system periodically. Check for cuts, fraying, and loose parts. Do not use a damaged seat belt until it is replaced. Damaged seat belts cannot protect an occupant from death or serious injury.
- Ensure that the belt and plate are locked and the belt is not twisted. If the seat belt does not function correctly, immediately contact your Toyota dealer.
- Replace the seat assembly, including the belts, if your vehicle has been involved in a serious accident, even if there is no obvious damage.
- Do not attempt to install, remove, modify, disassemble or dispose of the seat belts. Have any necessary repairs carried out by your Toyota dealer. Inappropriate handling may lead to incorrect operation.

Correct use of the seat belts

- Extend the shoulder belt so that it comes fully over the shoulder, but does not come into contact with the neck or slide off the shoulder.

- Position the lap belt as low as possible over the hips.
- Adjust the position of the seatback. Sit up straight and well back in the seat.
- Do not twist the seat belt.

■ Child seat belt usage

The seat belts of your vehicle were principally designed for persons of adult size.

- Use a child restraint system appropriate for the child, until the child becomes large enough to properly wear the vehicle's seat belt. (→P.64)
- When the child becomes large enough to properly wear the vehicle's seat belt, follow the instructions regarding seat belt usage. (→P.33)

■ Seat belt extender

If your seat belts cannot be fastened securely because they are not long enough, a personalized seat belt extender is available from your Toyota dealer free of charge.

**⚠ WARNING****■ Using a seat belt extender**

Observe the following precautions to reduce the risk of injury in the event of sudden braking, sudden swerving or an accident. Failure to do so may cause death or serious injury.

⚠ WARNING

- Do not wear the seat belt extender if you can fasten the seat belt without the extender.
- Do not use the seat belt extender when installing a child restraint system because the belt will not securely hold the child restraint system, increasing the risk of death or serious injury in the event of an accident.
- The personalized extender may not be safe on another vehicle, when used by another person, or at a different seating position other than the one originally intended.

⚠ NOTICE**■ When using a seat belt extender**

When releasing the seat belt, press on the buckle release button on the extender, not on the seat belt.

This helps prevent damage to the vehicle interior and the extender itself.

Fastening and releasing the seat belt

- 1 To fasten the seat belt, push the plate into the buckle until

a click sound is heard.

- 2 To release the seat belt, press the release button **A**.

If the seat belt cannot be pulled out of the retractor, firmly pull the belt and release it.

■ Emergency locking retractor (ELR)

The retractor will lock the belt during a sudden stop or on impact. It may also lock if you lean forward too quickly. A slow, easy motion will allow the belt to extend so that you can move around fully.

■ Automatic locking retractor (ALR)

When a passenger's shoulder belt is completely extended and then retracted even slightly, the belt is locked in that position and cannot be extended. This feature is used to hold the child restraint system (CRS) firmly. To free the belt again, fully retract the belt and then pull the belt out once more. (→P.64)

■ After using the rear center seat belt

Stow seat belt buckle in the pocket.

Adjusting the seat belt shoulder anchor height (front seats)

- 1 Push the seat belt shoulder anchor down while pressing the release button **A**.
- 2 Push the seat belt shoulder anchor up while pressing the release button **A**.

Move the height adjuster up and down as needed until you hear a click.

! WARNING

■ Adjustable shoulder anchor

Always make sure the shoulder belt is positioned across the center of your shoulder. The belt should be kept away from your neck, but not falling off your shoulder. Failure to do so could reduce the amount of protection in an accident and cause death or serious injuries in the event of a sudden stop, sudden swerve or accident.

Seat belt pretensioners

When the vehicle is subjected to a severe frontal or side impact or rollover, the pretensioners

retract the seat belts of the front seats and rear outer seats to securely restrain the occupants.

The pretensioners will not operate in minor frontal or side impacts, or rear impacts.

■ Replacing the belt after the pretensioner has been activated

If the vehicle is involved in multiple collisions, the pretensioner will activate for the first collision, but will not activate for the second or subsequent collisions.

■ PCS-linked control

If the PCS (Pre-Collision System) determines that the possibility of a collision with a vehicle is high, the seat belt pretensioners will be prepared to operate.

! WARNING

■ Seat belt pretensioners

Observe the following precautions to reduce the risk of injury in the event of sudden braking or an accident. Failure to do so may result in death or serious injury.

- Do not place anything, such as a cushion, on the front passenger's seat. Doing so will disperse the passenger's weight, which prevents the sensor from detecting the passenger's weight properly. As a result, the seat belt pretensioner for the front passenger's seat may not operate in the event of a collision.
- If the pretensioner has operated, the SRS warning light will illuminate. In this situation, the seat belt cannot be used and must be replaced by your Toyota dealer.

Active Assist (front seats of vehicles with Toyota Teammate Advanced Drive)

When the vehicle speed reaches approximately 12 mph (20 km/h) or higher, the seat belts will retract slightly to remove any slack. If the system determines that a collision is unavoidable, the front seat belts will retract before the collision. Additionally, the system may retract the seat belts if the brakes are applied suddenly or control of the vehicle is lost.

■ Active Assist

A motor sound may be heard when a front seat belt is released or a front door is opened. This does not indicate a malfunction.

■ Customization

Some functions can be customized. (→P.674)

SRS airbags (Vehicles without Toyota Teammate Advanced Drive)

The SRS airbags deploy when the vehicle is subjected to certain types of severe impact that may cause significant injury to the occupants. The airbags work together with the seat belts to help reduce the risk of death or serious injury.

SRS airbag system

■ Location of the SRS airbags

- A** SRS driver airbag/front passenger airbag
Help reduce impact to the head and chest of the driver and front passenger
- B** SRS knee airbags
Help reduce impact to the driver and front passenger
- C** SRS side airbags
Help reduce impact to the chest of the occupants of the front seats
- D** SRS curtain shield airbags
 - Help reduce impact to the heads of the occupants of the front and rear

outer seats

- Can help prevent the occupants from being thrown from the vehicle in the event of a vehicle rollover

Your vehicle is equipped with ADVANCED AIRBAGS designed based on US motor vehicle safety standards (FMVSS208). The airbag sensor assembly (ECU) controls airbag deployment based on information obtained from the sensors, etc., shown in the system components diagram above. This information includes crash severity and occupant information. As the airbags deploy, a chemical reaction in the inflators quickly fills the airbags with non-toxic gas to help restrain the motion of the occupants.

■ If the SRS airbags deploy (inflate)

- Slight abrasions, burns, bruising, etc., may be sustained from SRS airbags, due to the extremely high speed of deployment (inflation) by hot gases.
- A loud noise and white powder will be emitted.
- Parts of the airbag module (steering wheel hub, airbag cover and inflator) as well as the parts around the airbags may be hot for several minutes. The airbag itself may also be hot.
- The windshield may crack.
- The fuel cell system will be stopped and hydrogen supply will be stopped. (→P.101)
- All of the doors will be unlocked. (→P.167)
- The brakes and stop lights will be controlled automatically. (→P.465)
- The interior lights will turn on automatically. (→P.492)
- The emergency flashers will turn on automatically. (→P.602)
- For Safety Connect subscribers, if any of the following situations occur, the system is designed to send an emergency call to the response center, notifying them of the vehicle's location (without needing to push the "SOS" button)

and an agent will attempt to speak with the occupants to ascertain the level of emergency and assistance required. If the occupants are unable to communicate, the agent automatically treats the call as an emergency and helps to dispatch the necessary emergency services. (→P.77)

- When an SRS airbag has been deployed
- When a seat belt pretensioner has operated
- When the vehicle has been involved in a severe rear-end collision

■ The SRS airbags deploy in a frontal impact when

- The following SRS airbags will deploy in the event of an impact that exceeds a threshold level (level of force corresponding to an approximately 12 - 18 mph [20 - 30 km/h] frontal collision with a fixed wall that does not move or deform):
 - SRS front airbags
 - SRS knee airbags
- The threshold level at which the SRS airbags will deploy will be higher than normal in the in the following situations:
 - When the vehicle collides with an object, such as a parked vehicle or sign pole, which moves or deforms on impact
 - If the vehicle is involved in an

underride collision, such as a collision in which the front of the vehicle “underrides”, or goes under, the bed of a truck

- Depending on the type of collision, only the following may deploy:
 - Seat belt pretensioners
 - SRS knee airbags
- The SRS airbags for the front passenger’s seat will not deploy if there is no passenger in the front passenger seat. However, the SRS airbags for the front passenger’s seat may deploy, even if the seat is unoccupied, if luggage is put on the seat.
- In the event of an especially severe frontal collision, the left and right SRS curtain shield airbags may also deploy.

■ **The SRS airbags deploy in a side impact when**

- The following SRS airbags will deploy in the event of an impact that exceeds the set threshold level (level of force corresponding to the impact force produced by an approximately 1500 kg [3300 lb.] vehicle colliding with the passenger compartment at a perpendicular angle at an approximate speed of 20 - 30 km/h [12 - 18 mph]):
 - SRS side airbags
 - SRS curtain shield airbags
- If the vehicle is involved in a rollover, the following SRS airbags will deploy:
 - Both left and right SRS curtain shield airbags

■ **The SRS airbags deploy in an underside impact when**

- The following airbags may deploy if the underside of the vehicle collides with a hard object:
 - SRS front airbags
 - SRS knee airbags
 - SRS side airbags
 - SRS curtain shield airbags

- The following airbags may deploy if the vehicle becomes significantly tilted or is strongly impacted by skidding into a curb, etc.:
 - SRS curtain shield airbags

■ **The SRS side airbags will not deploy when**

- The following SRS airbags will not normally deploy in side or rear collisions, vehicle rollovers, or low speed frontal collisions. However, if such a collision causes sufficient sudden deceleration, the SRS airbags may deploy.
 - SRS front airbags
 - SRS knee airbags

- The following SRS airbags may not deploy if the vehicle is collided with at a certain angle or in a side collision where an area of the vehicle other than the passenger compartment is collided with:
 - SRS side airbags
 - SRS curtain shield airbags

- The following SRS airbags will not normally deploy in front or rear collisions, vehicle rollovers, or low speed side collisions:
 - SRS side airbags

- The following SRS airbags will not normally deploy in rear collisions, end over end vehicle rollovers, or low speed front or side collisions:
 - SRS curtain shield airbags

■ When to contact your Toyota dealer

In the following situations, the vehicle will require inspection and/or repair. Contact your Toyota dealer as soon as possible.

- When any of the SRS airbags have been deployed
- When the front of the vehicle is damaged or deformed, or was involved in a collision that was not severe enough to cause any of the following SRS airbags to deploy:

- SRS front airbags
- SRS knee airbags

- When a door or its surrounding area is damaged, deformed or has had a hole made in it, or was involved in a collision that was not severe enough to cause any of the following SRS airbags to deploy:
 - SRS side airbags
 - SRS curtain shield airbags

- When the pad section of the steering wheel, the dashboard near the front passenger SRS airbag or the lower side of the instrument panel is scratched, cracked, or otherwise damaged.
- When the surface of a seat with an SRS side airbag is scratched, cracked, or otherwise damaged.
- When the part of a front pillar, rear pillar or roof side rail garnish (padding) which covers a SRS curtain shield airbag is scratched, cracked, or otherwise damaged.

⚠ WARNING

■ SRS airbag precautions

Observe the following precautions. Failure to do so may result in death or serious injury.

⚠ WARNING

- The SRS driver airbag deploys with considerable force, and can cause death or serious injury, especially if the driver is very close to the airbag. The National Highway Traffic Safety Administration (NHTSA) advises:
Since the risk zone for the driver's airbag is the first 2 - 3 in. (50 - 75 mm) of inflation, placing yourself 10 in. (250 mm) from your driver airbag provides you with a clear margin of safety. This distance is measured from the center of the steering wheel to your breastbone. If your current driving position places you less than 10 in. (250 mm) away from the driver airbag, you can change your driving position in several ways:
 - Move your seat to the rear as far as possible while still being able to reach the pedals comfortably.
 - Slightly recline the seatback. Although vehicle designs vary, many drivers can achieve the 10 in. (250 mm) distance, even with the driver seat all the way forward, simply by reclining the seatback somewhat. If reclining the seatback makes it hard to see the road, raise yourself by using a firm, non-slippery cushion, or raise the seat if your vehicle has that feature.

- If your steering wheel is adjustable, tilt it downward. This points the airbag toward your chest instead of your head and neck. The seat should be adjusted as recommended by the NHTSA, while still being able to control the vehicle with the pedals and steering wheel, and maintaining your view of the instrument panel controls.
- If a seat belt extender has been connected to a front seat belt buckle but the latch plate of the seat belt has not been fastened to the seat belt extender, the SRS airbag system will judge that the occupant is wearing the seat belt even though the seat belt has not been fastened. In this case, the SRS front airbags may not deploy correctly in a collision, resulting in death or serious injury. Be sure to wear the seat belt correctly when using a seat belt extender.

- The SRS front passenger airbag deploys with considerable force, and can cause death or serious injury, especially if the front passenger is very close to the airbag. The front passenger seat should be positioned as far possible from the airbag with the seatback adjusted so that the passenger is sat upright.

⚠ WARNING

- Improperly seated and/or restrained infants and children can be killed or seriously injured by a deploying airbag. An infant or child who is too small to use a seat belt should be properly secured using a child restraint system. Toyota strongly recommends that all infants and children be placed in the rear seats of the vehicle and properly restrained. The rear seats are safer for infants and children than the front passenger seat. (→P.64)

- Do not sit on the edge of the seat or lean against the dashboard.

- Do not allow a child to stand in front of the SRS front passenger airbag or sit on the knees of a front passenger.

- Front seat occupants should never hold items on their lap.

- Do not lean against the door, roof side rail, or front, side, or rear pillar.

- Do not allow anyone to kneel on a seat toward the door or put their head or hands outside the vehicle.

- Do not attach anything to or lean anything against areas such as the dashboard, steering wheel pad and lower portion of the instrument panel.

⚠ WARNING

- Do not attach anything to areas such as the doors, windshield, side windows, front or rear pillars, roof side rails and assist grips. (With the exception of the speed limit label →P.634)

- Do not hang coat hangers or other hard objects on the coat hooks. These items could become projectiles if the SRS curtain shield airbags deploy, possibly leading to death or serious injury.
- If a vinyl cover is attached to the area where the SRS knee airbag deploys, be sure to remove it.
- Do not use seat accessories which cover the parts from which the SRS airbags deploy, as they may interfere with inflation of the SRS airbags. Such accessories may prevent the SRS airbags from deploying correctly, may disable the system or cause the SRS airbags to inflate unintentionally, possibly resulting in death or serious injury.
- Do not strike or apply significant force to the SRS airbag system components, front doors or their surrounding area. Doing so may cause the SRS airbags to malfunction.

- Do not touch any components of the SRS airbags immediately after the SRS airbags have deployed (inflated) as they may be hot.

- If breathing becomes difficult after the SRS airbags have deployed, open a door or window to allow fresh air in, or leave the vehicle if it is safe to do so. Wash off any residue as soon as possible to prevent skin irritation.

- If a part where an SRS airbag is stored is damaged or cracked, have it replaced by your Toyota dealer.

- Do not place anything, such as a cushion, on the front passenger's seat. Doing so will disperse the passenger's weight, which prevents the sensor from detecting the passenger's weight properly. As a result, the SRS front airbags for the front passenger's seat may not deploy in the event of a collision.

■ Modification and disposal of SRS airbag system components

Do not dispose of your vehicle or perform any of the following modifications without consulting your Toyota dealer. The SRS airbags may malfunction or deploy unintentionally, possibly leading to death or serious injury.

- Removal, installation, disassembly or repair of the SRS airbags
- Repair, removal or modification of the following parts or their surrounding
 - Steering wheel
 - Instrument panel

 **WARNING**

- Dashboard
- Seats
- Seat upholstery
- Front pillars
- Side pillars
- Rear pillars
- Roof side rails
- Front door panels
- Front door trim
- Front door speakers
- Modifications to the front door panels (such as making holes in them)
- Repair or modification of the following parts or their surrounding
 - Front fender
 - Front bumper
 - Sides of the vehicle interior
- Installation of the following parts or accessories
 - Bull bars or kangaroo bars
 - Snow plows
 - Winches
 - Roof luggage carriers
- Modifications to the vehicle's suspension
- Installation of electronic devices such as mobile two-way radios (RF-transmitter) and CD players
- Modifications to your vehicle for a persons with a physical disability

SRS airbags (Vehicles with Toyota Teammate Advanced Drive)

The SRS airbags inflate when the vehicle is subjected to certain types of severe impacts that may cause significant injury to the occupants. They work together with the seat belts to help reduce the risk of death or serious injury.

SRS airbag system

■ Location of the SRS airbags

► SRS front airbags

A SRS driver airbag/front passenger airbag

Can help protect the head and chest of the driver and front passenger from impact with interior components

B SRS knee airbags

Can help provide driver and front passenger protection

► SRS side and curtain shield airbags

C SRS front side airbags

Can help protect the torso of the front seat occupants

D SRS curtain shield airbags

- Can help protect primarily the head of occupants in the outer seats
- Can help prevent the occupants from being thrown from the vehicle in the event of vehicle rollover

■ SRS airbag system components

- A** Front impact sensors
- B** Knee airbags
- C** Front passenger airbag
- D** Curtain shield airbags
- E** Side impact sensors (front door)
- F** Seat belt pretensioners
- G** Side airbags
- H** SRS warning light
- I** Driver airbag
- J** Side impact sensors (rear)
- K** Side impact sensors (front)
- L** Driver's seat position sensor
- M** Driver's seat belt buckle switch

- N** Airbag sensor assembly
- O** Front passenger's seat belt buckle switch
- P** Front passenger occupant classification system (ECU and sensors)
- Q** "AIRBAG ON" and "AIRBAG OFF" indicator lights

Your vehicle is equipped with ADVANCED AIRBAGS designed based on the US motor vehicle safety standards (FMVSS208). The airbag sensor assembly (ECU) controls airbag deployment based on information obtained from the sensors etc. shown in the system components diagram above. This information includes crash severity and occupant information. As the airbags deploy, a chemical reaction in the inflators quickly fills the airbags with non-toxic gas to help restrain the motion of the occupants.

■ If the SRS airbags deploy (inflate)

- Slight abrasions, burns, bruising, etc., may be sustained from SRS airbags, due to the extremely high speed deployment (inflation) by hot gases.
- A loud noise and white powder will be emitted.
- Parts of the airbag module (steering wheel hub, airbag cover and inflator) as well as the front seats, parts of the front and rear pillars, and roof side rails, may be hot for several minutes. The airbag itself may also be hot.
- The windshield may crack.
- The fuel cell system will be stopped and hydrogen supply will be stopped from the hydrogen tank valves. (→P.101)
- All of the doors will be unlocked. (→P.167)
- The brakes and stop lights will be controlled automatically. (→P.465)
- The interior lights will turn on automatically. (→P.492)
- The emergency flashers will turn on automatically. (→P.602)

- For Safety Connect subscribers, if any of the following situations occur, the system is designed to send an emergency call to the response center, notifying them of the vehicle's location (without needing to push the "SOS" button) and an agent will attempt to speak with the occupants to ascertain the level of emergency and assistance required. If the occupants are unable to communicate, the agent automatically treats the call as an emergency and helps to dispatch the necessary emergency services. (→P.77)
 - An SRS airbag is deployed.
 - A seat belt pretensioner is activated.
 - The vehicle is involved in a severe rear-end collision.

■ SRS airbag deployment conditions (SRS front airbags)

- The SRS front airbags will deploy in the event of an impact that exceeds the set threshold level (the level of force corresponding to an approximately 12 - 18 mph [20 - 30 km/h] frontal collision with a fixed wall that does not move or deform).

However, this threshold velocity will

be considerably higher in the following situations:

- If the vehicle strikes an object, such as a parked vehicle or sign pole, which can move or deform on impact
- If the vehicle is involved in an underride collision, such as a collision in which the front of the vehicle “underrides”, or goes under, the bed of a truck
- Depending on the type of collision, it is possible that only the seat belt pretensioners will activate.
- The SRS front airbags for the front passenger will not activate if there is no passenger sitting in the front passenger seat. However, the SRS front airbags for the front passenger may deploy if luggage is put in the seat, even if the seat is unoccupied.

■ SRS airbag deployment conditions (SRS side and curtain shield airbags)

- The SRS side and curtain shield airbags will deploy in the event of an impact that exceeds the set threshold level (the level of force corresponding to the impact force produced by an approximately 3300 lb. [1500 kg] vehicle colliding with the vehicle cabin from a direction perpendicular to the vehicle orientation at an approximate speed of 12 - 18 mph [20 - 30 km/h]).
- Both SRS curtain shield airbags may deploy in the event of a severe side collision.
- Both SRS curtain shield airbags will deploy in the event of vehicle rollover.
- Both SRS curtain shield airbags may also deploy in the event of a severe frontal collision.

■ Conditions under which the SRS airbags may deploy (inflate), other than a collision

The SRS front airbags and SRS

side and curtain shield airbags may also deploy if a serious impact occurs to the underside of your vehicle. Some examples are shown in the illustration.

- Hitting a curb, edge of pavement or hard surface
- Falling into or jumping over a deep hole
- Landing hard or falling

The SRS curtain shield airbags may also deploy under the situations shown in the illustration.

- The angle of vehicle tip-up is marginal.
- The vehicle skids and hits a curb stone.

■ Types of collisions that may not deploy the SRS airbags (SRS front airbags)

The SRS front airbags do not generally inflate if the vehicle is involved in a side or rear collision, if it rolls over, or if it is involved in a low-speed frontal collision. But, whenever a collision of any type causes sufficient forward deceleration of the vehicle, deployment of the SRS front airbags may occur.

- Collision from the side
- Collision from the rear

- Vehicle rollover

- Types of collisions that may not deploy the SRS airbags (SRS side and curtain shield airbags)

The SRS side and curtain shield airbags may not activate if the vehicle is subjected to a collision from the side at certain angles, or a collision to the side of the vehicle body other than the passenger compartment.

- Collision from the side to the vehicle body other than the passenger compartment
- Collision from the side at an angle

The SRS side airbags do not generally inflate if the vehicle is involved in a frontal or rear collision, if it rolls over, or if it is involved in a low-speed side collision.

- Collision from the front
- Collision from the rear
- Vehicle rollover

The SRS curtain shield airbags do

not generally inflate if the vehicle is involved in a rear collision, if it pitches end over end, or if it is involved in a low-speed side or low-speed frontal collision.

- Collision from the rear
- Pitching end over end

- When to contact your Toyota dealer

In the following cases, the vehicle will require inspection and/or repair. Contact your Toyota dealer as soon as possible.

- Any of the SRS airbags have been inflated.
- The front of the vehicle is damaged or deformed, or was involved in an accident that was not severe enough to cause the SRS front airbags to inflate.

- A portion of a door or its surrounding area is damaged, deformed or has had a hole made in it, or the vehicle was involved in an accident that was not severe enough to cause the SRS side and curtain shield airbags to inflate.

- The pad section of the steering wheel, dashboard near the front passenger airbag or lower portion of the instrument panel is scratched, cracked, or otherwise damaged.

- The surface of the seats with the side airbag is scratched, cracked, or otherwise damaged.

- The portion of the front pillars, rear pillars or roof side rail garnishes (padding) containing the SRS curtain shield airbags inside is scratched, cracked, or otherwise damaged.

⚠ WARNING

■ SRS airbag precautions

Observe the following precautions regarding the SRS airbags. Failure to do so may cause death or serious injury.

- The driver and all passengers in the vehicle must wear their seat belts properly. The SRS airbags are supplemental devices to be used with the seat belts.
- The SRS driver airbag deploys with considerable force, and can cause death or serious injury especially if the driver is very close to the airbag.

The National Highway Traffic Safety Administration (NHTSA) advises: Since the risk zone for the driver's airbag is the first 2 - 3 in. (50 - 75 mm) of inflation, placing yourself 10 in. (250 mm) from your driver airbag provides you with a clear margin of safety. This distance is measured from the center of the steering wheel to your breastbone. If you sit less than 10 in. (250 mm) away now, you can change your driving position in several ways:

- Move your seat to the rear as far as you can while still reaching the pedals comfortably.

⚠ WARNING

- Slightly recline the back of the seat.
Although vehicle designs vary, many drivers can achieve the 10 in. (250 mm) distance, even with the driver seat all the way forward, simply by reclining the back of the seat somewhat. If reclining the back of your seat makes it hard to see the road, raise yourself by using a firm, non-slippery cushion, or raise the seat if your vehicle has that feature.
- If your steering wheel is adjustable, tilt it downward. This points the airbag toward your chest instead of your head and neck.

The seat should be adjusted as recommended by NHTSA above, while still maintaining control of the foot pedals, steering wheel, and your view of the instrument panel controls.

- If the seat belt extender has been connected to the front seat belt buckles but the seat belt extender has not also been fastened to the latch plate of the seat belt, the SRS front airbags will judge that the driver and front passenger are wearing the seat belt even though the seat belt has not been connected. In this case, the SRS front airbags may not activate correctly in a collision, resulting in death or serious injury in the event of a collision. Be sure to wear the seat belt with the seat belt extender.

- The SRS front passenger airbag also deploys with considerable force, and can cause death or serious injury especially if the front passenger is very close to the airbag. The front passenger seat should be as far from the airbag as possible with the seat-back adjusted, so the front passenger sits upright.
- Improperly seated and/or restrained infants and children can be killed or seriously injured by a deploying airbag. An infant or child who is too small to use a seat belt should be properly secured using a child restraint system. Toyota strongly recommends that all infants and children be placed in the rear seats of the vehicle and properly restrained. The rear seats are safer for infants and children than the front passenger seat. (→P.64)

⚠ WARNING

- Do not sit on the edge of the seat or lean against the dashboard.

- Do not allow a child to stand in front of the SRS front passenger airbag unit or sit on the knees of a front passenger.

- Do not allow the front seat occupants to hold items on their knees.

- Do not lean against the door, the roof side rail or the front, side and rear pillars.

- Do not allow anyone to kneel on the passenger seats toward the door or put their head or hands outside the vehicle.

- Do not attach anything to or lean anything against areas such as the dashboard, steering wheel pad and lower portion of the instrument panel. These items can become projectiles when the SRS driver, front passenger and knee airbags deploy.

- Do not attach anything to areas such as a door, windshield, side windows, front or rear pillar, roof side rail and assist grip. (Except for the speed limit label →P.634)

**WARNING**

- Do not hang coat hangers or hard objects on the coat hooks. All of these items could become projectiles and may cause death or serious injury, should the SRS curtain shield airbags deploy.
- If a vinyl cover is put on the area where the SRS knee airbag will deploy, be sure to remove it.
- Do not use seat accessories which cover the parts where the SRS side airbags inflate as they may interfere with inflation of the SRS airbags. Such accessories may prevent the SRS side airbags from activating correctly, disable the system or cause the SRS side airbags to inflate accidentally, resulting in death or serious injury.
- Do not strike or apply significant levels of force to the area of the SRS airbag components or the front doors. Doing so can cause the SRS airbags to malfunction.
- Do not touch any of the component parts immediately after the SRS airbags have deployed (inflated) as they may be hot.
- If breathing becomes difficult after the SRS airbags have deployed, open a door or window to allow fresh air in, or leave the vehicle if it is safe to do so. Wash off any residue as soon as possible to prevent skin irritation.
- If the areas where the SRS airbags are stored, such as the steering wheel pad and front and rear pillar garnishes are damaged or cracked, have them replaced by your Toyota dealer.

- Do not place anything, such as a cushion, on the front passenger's seat. Doing so will disperse the passenger's weight, which prevents the sensor from detecting the passenger's weight properly. As a result, the SRS front airbags for the front passenger may not deploy in the event of a collision.

Modification and disposal of SRS airbag system components

Do not dispose of your vehicle or perform any of the following modifications without consulting your Toyota dealer. The SRS airbags may malfunction or deploy (inflate) accidentally, causing death or serious injury.

- Installation, removal, disassembly and repair of the SRS airbags
- Repairs, modifications, removal or replacement of the steering wheel, instrument panel, dashboard, seats or seat upholstery, front, side and rear pillars, roof side rails, front door panels, front door trims or front door speakers
- Modifications to the front door panel (such as making a hole in it)
- Repairs or modifications of the front fender, front bumper, or side of the occupant compartment
- Installation of a grille guard (bull bars, kangaroo bar, etc.), snow plows or winches
- Modifications to the vehicle's suspension system

⚠ WARNING

- Installation of electronic devices such as mobile two-way radios and CD players
- Modifications to your vehicle for a person with a physical disability

Pop Up Hood

In the event of a frontal collision with a body, such as a pedestrian, the Pop Up Hood system raises the hood to reduce the possibility of a serious impact to the pedestrian's head area by adding clearance to the fuel cell unit compartment.

When the sensors located at the back of the front bumper detect a frontal impact with a body, such as a pedestrian, which meets or exceeds the threshold level while the vehicle is being driven within the operational speed range, the system operates.

System components

- A** Sensors
- B** Hood
- C** Lifters

■ Pop Up Hood precautions

- Before scrapping your vehicle, make sure to contact your Toyota dealer.
- The Pop Up Hood system cannot be reused once it has operated. Have it replaced by your Toyota dealer.

■ PCS-linked functions

If the PCS (Pre-Collision System) determines that the possibility of a collision with a pedestrian or bicyclist is high, the Pop Up Hood will be prepared to operate.

■ Pop Up Hood operational conditions

The Pop Up Hood will operate when the vehicle detects an impact such as the following:

- The front bumper detects a frontal impact equivalent to or greater than that of a pedestrian while the vehicle being driven within the operational speed range of approximately 16 to 34 mph (25 to 55 km/h). (The system is operated by an impact of threshold level or greater, even in the case of a minor collision that may not leave a trace on the front bumper. Also, depending on the impact conditions or vehicle speed, the system may operate by a collision with a light or small object or a small animal.)
- In other situations, such as the following the system may operate when an impact is applied to the lower part of the vehicle or front bumper:
 - Colliding with a curb
 - Falling into a deep hole
 - Landing hard
 - Hitting the slope of a parking lot, an undulating road, a protruding object or falling object

■ Conditions under which the Pop Up Hood may not operate properly

- If a pedestrian collides with the right or left corner of the front bumper or the side of the vehicle. As such impacts may be difficult to detect, the system may not operate.
- If the vehicle speed is not detected correctly, such as if the vehicle is sliding sideways, the system may not operate properly.

■ Conditions under which the Pop Up Hood will not operate

The Pop Up Hood will not operate in the following situations:

- Colliding with a lying person
- A frontal impact applied to the front bumper while driving at speeds outside of the operational speed range
- A side impact or rear impact
- A vehicle rollover (In some accident situations, the Pop Up Hood may operate.)

WARNING

■ When the Pop Up Hood is operated

- Do not pull the hood lock release lever. Doing so after the Pop Up Hood has operated will further raise the hood and may cause an injury. Do not drive with the hood raised, as doing so may block the driver's vision, possibly causing an accident.
- Do not forcibly push down the hood. As the popped up hood cannot be lowered by hand, doing so may deform the hood or cause an injury.

 **WARNING**

- If the Pop Up Hood has operated, have it replaced by your Toyota dealer. If the Pop Up Hood has operated, stop the vehicle in a safe place and contact your Toyota dealer.
- Do not touch the lifters immediately after the Pop Up Hood has operated, as the lifters may be hot and burn you.

 **NOTICE****■ Pop Up Hood precautions**

- Make sure to close the hood before driving, as the system may not operate properly if the hood is not fully closed.
- Make sure that all 4 tires are of the specified size and inflated to the specified tire pressure. If tires of a different size are used, the system may not operate properly.
- If something has hit the area around the front bumper, the sensors may be damaged even if the Pop Up Hood has not operated. Have the vehicle inspected by your Toyota dealer.
- Do not remove or repair the parts or wiring of the Pop Up Hood, as doing so may cause accidental operation or prevent the system from operating properly. If repair or replacement is necessary, contact your Toyota dealer.
- Do not remove such components as the front bumper, hood or suspension, or replace them with non-genuine parts, as doing so may prevent the system from operating properly.

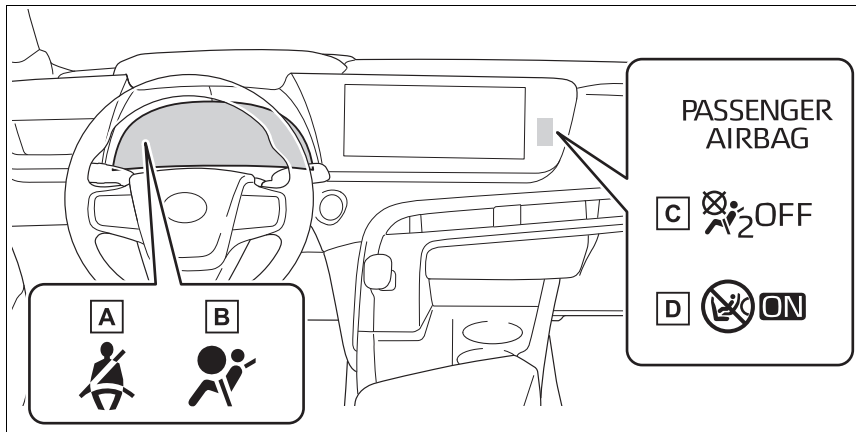

- Do not install anything to the front bumper or hood, as doing so may prevent the sensors from detecting an impact correctly and prevent the system from operating properly.
- Do not close the hood with force or apply load to the lifters, as doing so may damage the lifters and prevent the system from operating properly.
- Do not modify the suspension, as changes made to the vehicle height may prevent the system from operating properly.

Front passenger occupant classification system

Your vehicle is equipped with a front passenger occupant classification system. This system detects the conditions of the front passenger seat and activates or deactivates the following SRS airbags.

- SRS front passenger airbag
- SRS front passenger knee airbag

System components

- A** Front passenger's seat belt reminder light
- B** SRS warning light
- C** "AIRBAG OFF" indicator light
- D** "AIRBAG ON" indicator light

Front passenger occupant classification system conditions and operation

■ Adult*¹

*1: The system judges a person of adult size as an adult. When a smaller adult sits in the front passenger seat, the system may not recognize them as an adult depending on their physique and posture.

*2: In the event the front passenger is wearing a seat belt

*3: In the event the front passenger does not wear a seat belt

*4: For some children, child in seat, child in booster seat or child in convertible seat, the system may not recognize them as a child. Factors which may affect this can be the physique or posture.

*5: Never install a rear-facing child restraint system on the front passenger seat. A forward-facing child restraint system should only be installed on the front passenger seat when it is unavoidable. (→P.66)

*6: In case the indicator light is not illuminated, consult this manual on how to install the child restraint system properly. (→P.64)

⚠ WARNING**■ Front passenger occupant classification system precautions**

Observe the following precautions regarding the front passenger occupant classification system. Failure to do so may cause death or serious injury.

- Wear the seat belt properly.
- Make sure the front passenger's seat belt plate has not been left inserted into the buckle before someone sits in the front passenger seat.
- Make sure the "AIRBAG OFF" indicator light is not illuminated when using the seat belt extender for the front passenger seat. If the "AIRBAG OFF" indicator light is illuminated, disconnect the extender tongue from the seat belt buckle, and reconnect the seat belt. Reconnect the seat belt extender after making sure the "AIRBAG ON" indicator light is illuminated. If you use the seat belt extender while the "AIRBAG OFF" indicator light is illuminated, the SRS airbags for the front passenger will not activate, which could cause death or serious injury in the event of a collision.
- Do not apply a heavy load to the front passenger seat or equipment (e.g. seatback pocket).
- Do not put weight on the front passenger seat by putting your hands or feet on the front passenger seat seatback from the rear passenger seat.
- Do not let a rear passenger lift the front passenger seat with their feet or press on the seatback with their legs.
- Do not put objects under the front passenger seat.
- Do not recline the front passenger seatback so far that it touches a rear seat. This may cause the "AIRBAG OFF" indicator light to be illuminated, which indicates that the SRS airbags for the front passenger will not activate in the event of a severe accident. If the seatback touches the rear seat, return the seatback to a position where it does not touch the rear seat. Keep the front passenger seatback as upright as possible when the vehicle is moving. Reclining the seatback excessively may lessen the effectiveness of the seat belt system.
- If an adult sits in the front passenger seat, the "AIRBAG ON" indicator light is illuminated. If the "AIRBAG OFF" indicator is illuminated, ask the passenger to sit up straight, well back in the seat, feet on the floor, and with the seat belt worn correctly. If the "AIRBAG OFF" indicator still remains illuminated, either ask the passenger to move to the rear seat, or if that is not possible, move the front passenger seat fully rearward.
- When it is unavoidable to install a forward-facing child restraint system on the front passenger seat, install the child restraint system on the front passenger seat in the proper order. (→P.66)
- Do not modify or remove the front seats.

**WARNING**

- Do not kick the front passenger seat or subject it to severe impact. Otherwise, the SRS warning light may come on to indicate a malfunction of the front passenger occupant classification system. In this case, contact your Toyota dealer immediately.
- Child restraint systems installed on the rear seat should not contact the front seatbacks.
- Do not use a seat accessory, such as a cushion and seat cover, that covers the seat cushion surface.
- Do not modify or replace the upholstery of the front seat.

Riding with children

Observe the following precautions when children are in the vehicle.

Use a child restraint system appropriate for the child, until the child becomes large enough to properly wear the vehicle's seat belt.

- It is recommended that children sit in the rear seats to avoid accidental contact with the shift lever, wiper switch, etc.
- Use the rear door child-protector lock or the window lock switch to avoid children opening the door while driving or operating the power window accidentally.
(→P.170, 198)
- Do not let small children operate equipment which may catch or pinch body parts, such as the power window, hood, trunk, seats, etc.

**WARNING****■ When children are in the vehicle**

Never leave children unattended in the vehicle, and never allow children to have or use the key.

Children may be able to start the vehicle or shift the vehicle into neutral. There is also a danger that children may injure themselves by playing with the windows or other features of the vehicle. In addition, heat build-up or extremely cold temperatures inside the vehicle can be fatal to children.

Child restraint systems

Before installing a child restraint system in the vehicle, there are precautions that need to be observed, different types of child restraint systems, as well as installation methods, etc., written in this manual.

Use a child restraint system when riding with a small child that cannot properly use a seat belt. For the child's safety, install the child restraint system to a rear seat. Be sure to follow the installation method that is in the operation manual enclosed with the restraint system.

Table of contents

- Points to remember: P.64
- Child restraint system: P.66
- When using a child restraint system: P.66
- Child restraint system installation method
 - Fixed with a seat belt: P.68
 - Fixed with a child restraint LATCH anchor: P.72
 - Using an anchor bracket (for top tether strap): P.74

Points to remember

The laws of all 50 states of the U.S.A. as well as Canada now require the use of child restraint systems.

- Prioritize and observe the warnings, as well as the laws and regulations for child restraint systems.
- Use a child restraint system until the child becomes large enough to properly wear the vehicle's seat belt.
- Choose a child restraint system that suits your vehicle and is appropriate to the age and size of the child.

WARNING

■ When a child is riding

Observe the following precautions. Failure to do so may result in death or serious injury.

- For effective protection in automobile accidents and sudden stops, a child must be properly restrained, using a seat belt or child restraint system which is correctly installed. For installation details, refer to the operation manual enclosed with the child restraint system. General installation instruction is provided in this manual.

**WARNING**

- Toyota strongly urges the use of a proper child restraint system that conforms to the weight and size of the child, installed on the rear seat. According to accident statistics, the child is safer when properly restrained in the rear seat than in the front seat.

- Holding a child in your or someone else's arms is not a substitute for a child restraint system. In an accident, the child can be crushed against the windshield or between the holder and the interior of the vehicle.

■ Handling the child restraint system

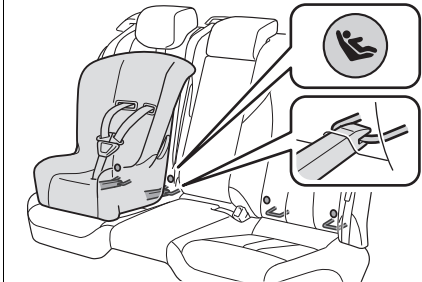

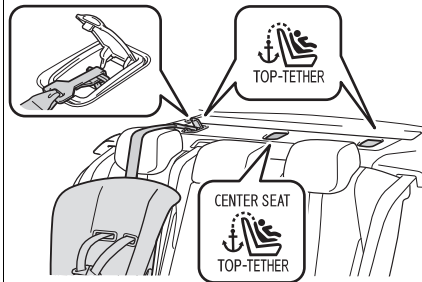

If the child restraint system is not properly fixed in place, the child or other passengers may be seriously injured or even killed in the event of sudden braking, sudden swerving, or an accident.

- If the vehicle were to receive a strong impact from an accident, etc., it is possible that the child restraint system has damage that is not readily visible. In such cases, do not reuse the restraint system.
- Make sure you have complied with all installation instructions provided with the child restraint system manufacturer and that the system is properly secured.
- Keep the child restraint system properly secured on the seat even if it is not in use. Do not store the child restraint system unsecured in the passenger compartment.
- If it is necessary to detach the child restraint system, remove it from the vehicle or store it securely in the trunk.

Child restraint system

■ **Types of child restraint system installation methods**

Confirm with the operation manual enclosed with the child restraint system about the installation of the child restraint system.

Installation method	Page	
Seat belt attachment		P.68
Child restraint LATCH anchors attachment		P.72
Anchor brackets (for top tether strap) attachment		P.74

When using a child restraint system

■ **When installing a child restraint system to a front passenger seat**

For the safety of a child, install child restraint systems to a rear seats. When installing child restraint system to a front passenger seat is unavoidable, adjust the seat as follows and

install the child restraint system.

- Move the front seat fully rearward.
- Adjust the seatback angle to the most upright position.

When installing a forward-facing child seat, if there is a gap between the child seat and the seatback, adjust the seatback angle until good contact is achieved.

- If the head restraint interferes with the child restraint system installation and the head restraint can be removed, remove the head restraint. Otherwise, put the head restraint in the upper most position.

⚠ WARNING

■ When using a child restraint system

Observe the following precautions. Failure to do so may result in death or serious injury.

- Never install a rear-facing child restraint system on the front passenger seat even if the “AIRBAG OFF” indicator light is illuminated. In the event of an accident, the force of the rapid inflation of the front passenger airbag can cause death or serious injury to the child if the rear-facing child restraint system is installed on the front passenger seat.
- A forward-facing child restraint system may be installed on the front passenger seat only when it is unavoidable. A child restraint system that requires a top tether strap should not be used in the front passenger seat since there is no top tether strap anchor for the front passenger seat.
- A forward-facing child restraint system may be installed on the front passenger seat only when it is unavoidable. When installing a forward-facing child restraint system on the front passenger seat, adjust the seatback angle to the most upright position, move the seat to the rearmost position, and raise the seat to the upper most position, even if the “AIRBAG OFF” indicator light is illuminated.

⚠ WARNING

- Do not allow the child to lean his/her head or any part of his/her body against the door or the area of the seat, front or rear pillars, or roof side rails from which the SRS side airbags or SRS curtain shield airbags deploy even if the child is seated in the child restraint system. It is dangerous if the SRS side and curtain shield airbags inflate, and the impact could cause death or serious injury to the child.

- When a booster seat is installed, always ensure that the shoulder belt is positioned across the center of the child's shoulder. The belt should be kept away from the child's neck, but not so that it could fall off the child's shoulder.
- Use child restraint system suitable to the age and size of the child and install it to the rear seat.

- If the driver's seat interferes with the child restraint system and prevents it from being attached correctly, attach the child restraint system to the right-hand rear seat.

- Adjust the front passenger seat so that it does not interfere with the child restraint system.

Child restraint system fixed with a seat belt

A child restraint system for a small child or baby must itself be properly restrained on the seat with the lap portion of the lap/shoulder belt.

■ **Installing child restraint system using a seat belt (child restraint lock function belt)**

Install the child restraint system in accordance to the operation manual enclosed with the child restraint system.

■ **Rear-facing — Infant seat/convertible seat**

- 1 Adjust the head restraint to the lowermost position. (→P.182)

- 2 Place the child restraint system on the rear seat facing the rear of the vehicle.

- 3 Run the seat belt through the child restraint system and insert the plate into the buckle. Make sure that the belt is not twisted.

- 4 Fully extend the shoulder belt and allow it to retract to put it in lock mode. In lock mode, the belt cannot be extended.

- 5 While pushing the child restraint system down into

the rear seat, allow the shoulder belt to retract until the child restraint system is securely in place.

After the shoulder belt has retracted to a point where there is no slack in the belt, pull the belt to check that it cannot be extended.

- 6 After installing the child restraint system, rock it back and forth to ensure that it is installed securely. (→P.71)

■ Forward-facing — Convertible seat

- 1 Adjust the seat
 - ▶ When using the front passenger seat

If installing the child restraint system to the front passenger seat is unavoidable, refer to P.66 for front passenger seat adjustment.

- ▶ When using the rear seat

Adjust the head restraint to the lowest position. (→P.182)

- 2 Place the child restraint system on the seat facing the front of the vehicle.

- 3 Run the seat belt through the child restraint system and insert the plate into the buckle. Make sure that the belt is not twisted.

- 4 Fully extend the shoulder belt and allow it to retract to put it in lock mode. In lock mode, the belt cannot be extended.

- 5 While pushing the child restraint system into the rear

seat, allow the shoulder belt to retract until the child restraint system is securely in place.

After the shoulder belt has retracted to a point where there is no slack in the belt, pull the belt to check that it cannot be extended.

- 6 If the child restraint has a top tether strap, follow the child restraint manufacturer's operation manual regarding the installation, using the top tether strap to latch onto the top tether strap anchor. (→P.74)

- 7 After installing the child restraint system, rock it back and forth to ensure that it is installed securely. (→P.71)

■ Booster seat

- 1 If installing the child restraint system to the front passenger seat is unavoidable, refer to P.66 for front passenger seat adjustment.
- 2 Place the child restraint system on the seat facing the front of the vehicle.

► **Booster type**

► **High back type**

3 Sit the child in the child restraint system. Fit the seat belt to the child restraint system according to the manufacturer's instructions and insert the plate into the buckle. Make sure that the belt is not twisted.

Check that the shoulder belt is correctly positioned over the child's shoulder and that the lap belt is as low as possible. (→P.33)

■ **Removing a child restraint system installed with a seat belt**

Press the buckle release button and fully retract the seat belt.

When releasing the buckle, the child restraint system may spring up due to the rebound of the seat cushion. Release the buckle while holding down the child restraint system.

Since the seat belt automatically reels itself, slowly return it to the stowing position.

⚠ WARNING

■ **When installing a child restraint system**

Observe the following precautions. Failure to do so may result in death or serious injury.

- Do not allow children to play with the seat belt. If the seat belt becomes twisted around a child's neck, it may lead to choking or other serious injuries that could result in death. If this occurs and the buckle cannot be unfastened, scissors should be used to cut the belt.
- Ensure that the belt and plate are securely locked and the seat belt is not twisted.

⚠ WARNING

- Shake the child restraint system left and right, and forward and backward to ensure that it has been securely installed.
- When a booster seat is installed, always ensure that the shoulder belt is positioned across the center of the child's shoulder. The belt should be kept away from the child's neck, but not so that it could fall off the child's shoulder.
- Follow all installation instructions provided by the child restraint system manufacturer.
- When securing some types of child restraint systems in rear seats, it may not be possible to properly use the seat belts in positions next to the child restraint without interfering with it or affecting seat belt effectiveness. Be sure your seat belt fits snugly across your shoulder and low on your hips. If it does not, or if it interferes with the child restraint, move to a different position. Failure to do so may result in death or serious injury.
- When installing a child restraint system in the rear center seat, adjust both seat cushions to the same position and align both seatbacks at the same angle. Otherwise, the child restraint system cannot be securely restrained and this may cause death or serious injuries in the event of sudden braking, sudden swerving or an accident.
- If the seat is adjusted, reconfirm the security of the child restraint system.

■ When installing a booster seat

To prevent the belt from going into ALR lock mode, do not fully extend the shoulder belt. ALR mode causes the belt to tighten only. This could cause injury or discomfort to the child. (→P.35)

■ Do not use a seat belt extender

If a seat belt extender is used when installing a child restraint system, the seat belt will not securely hold the child restraint system, which could cause death or serious injury to the child or other passengers in the event of sudden braking, sudden swerving or an accident.

Child restraint system fixed with a child restraint LATCH anchor**■ Child restraint LATCH anchors**

LATCH anchors are provided for the outboard rear seat. (Buttons displaying the location of the anchors are attached to the seats.)

**■ When installing in the rear outboard seats**

Install the child restraint system

in accordance to the operation manual enclosed with the child restraint system.

- 1 Adjust the head restraint to the lowermost position. (→P.182)
- 2 Widen the gap between the seat cushion and seatback slightly.

▶ With flexible lower attachments

- 3 Latch the hooks of the lower attachments onto the LATCH anchors.

For owners in Canada:

The symbol on a child restraint system indicates **A** the presence of a lower connector system.

A Canada only

▶ With rigid lower attachments

- 3 Latch the buckles onto the LATCH anchors.

For owners in Canada:

The symbol on a child restraint system indicates **A** the presence of a lower connector system.

A Canada only

- 4 If the child restraint has a top tether strap, follow the child restraint manufacturer's operation manual regarding the installation, using the top tether strap to latch onto the top tether strap anchor. (→P.74)
- 5 After installing the child restraint system, rock it back and forth to ensure that it is installed securely. (→P.71)

■ **When installing in the rear center seat**

There are no LATCH anchors behind the rear center seat. However, the inboard LATCH anchors of the outboard seats, which are 18.1 in. (460 mm) apart, can be used if the child restraint system manufacturer's instructions permit use of those anchors with the anchor spacing stated.

Child restraint systems with rigid lower attachments cannot be installed in the center seat. This type of child restraint system can only be installed in the outboard seat.

■ **Laws and regulations pertaining to anchors**

The LATCH system conforms to FMVSS225 or CMVSS210.2. Child restraint systems conforming to FMVSS213 or CMVSS213 specifications can be used. This vehicle is designed to conform to SAE J1819.

 **WARNING**

■ **When installing a child restraint system**

Observe the following precautions. Failure to do so may result in death or serious injury.

- When using the LATCH anchors, be sure that there are no foreign objects around the anchors and that the seat belt is not caught behind the child restraint system.

- Follow all installation instructions provided by the child restraint system manufacturer.
- Never attach two child restraint system attachments to the same anchor. In a collision, one anchor may not be strong enough to hold two child restraint system attachments and may break. If the LATCH anchors are already in use, use the seat belt to install a child restraint system in the center seat.
- When securing some types of child restraint systems in rear seats, it may not be possible to properly use the seat belts in positions next to the child restraint without interfering with it or affecting seat belt effectiveness. Be sure your seat belt fits snugly across your shoulder and low on your hips. If it does not, or if it interferes with the child restraint, move to a different position. Failure to do so may result in death or serious injury.
- If the seat is adjusted, reconfirm the security of the child restraint system.

Using an anchor bracket (for top tether strap)

■ **Anchor brackets (for top tether strap)**

Anchor brackets are provided for each rear seat.

Use anchor brackets when fixing the top tether strap.

► Outboard rear seats

A Anchor brackets

B Top tether strap

► Rear center seat

A Anchor bracket

B Top tether strap

■ **Fixing the top tether strap to the anchor bracket**

Install the child restraint system in accordance to the operation manual enclosed with the child restraint system.

- 1 Adjust the head restraint to the lowermost position. (→P.182)
- 2 Open the anchor bracket cover, latch the hook onto the anchor bracket and tighten the top tether strap.

Make sure the top tether strap is securely latched. (→P.71)

► Outboard rear seats

A Hook

B Top tether strap

► Rear center seat

A Hook

B Top tether strap

■ **Laws and regulations pertaining to anchors**

The LATCH system conforms to FMVSS225 or CMVSS210.2. Child restraint systems conforming to FMVSS213 or CMVSS213 specifications can be used. This vehicle is designed to conform to SAE J1819.

WARNING

■ **When installing a child restraint system**

Observe the following precautions.

Failure to do so may result in death or serious injury.

- Firmly attach the top tether strap and make sure that the belt is not twisted.
- Do not attach the top tether strap to anything other than the anchor bracket.
- Follow all installation instructions provided by the child restraint system manufacturer.
- Be sure to have the top tether strap pass over the top of the head restraint. If the belt passes below the head restraint, it is possible that the child restraint system may not be securely fixed.
- If the seat is adjusted, reconfirm the security of the child restraint system.

NOTICE

■ **Anchor brackets (for top tether strap)**

When not in use, make certain to close the lid. If it remains open, the lid may be damaged.

Safety Connect*

*: If equipped

Safety Connect is a subscription-based telematics service that uses Global Positioning System (GPS) data and embedded cellular technology to provide safety and security features to subscribers. Safety Connect is supported by Toyota's designated response center, which operates 24 hours per day, 7 days per week.

Safety Connect service is available by subscription on select, telematics hardware-equipped vehicles.

By using the Safety Connect service, you are agreeing to be bound by the Telematics Subscription Service Agreement and its Terms and Conditions, as in effect and amended from time to time, a current copy of which is available at Toyota.com. All use of the Safety Connect service is subject to such then-applicable Terms and Conditions.

System components

- A** Microphone
- B** "SOS" button
- C** LED light indicators
- D** Speaker

■ **Certification for Safety Connect**
→P.736

Services

Subscribers have the following Safety Connect services available:

- **Automatic Collision Notification***

Helps drivers receive necessary response from emergency service providers. (→P.79)

*: U.S. Patent No. 7,508,298 B2

- **Stolen Vehicle Location**

Helps drivers in the event of vehicle theft. (→P.79)

- **Emergency Assistance Button**

(“SOS”)

Connects drivers to response-center support. (→P.79)

- **Enhanced Roadside Assistance**

Provides drivers various on-road assistance. (→P.79)

Subscription

After you have signed the Telematics Subscription Service Agreement and are enrolled, you can begin receiving services.

A variety of subscription terms is available for purchase. Contact your Toyota dealer, call the following or push the “SOS” button in your vehicle for further subscription details.

- **The United States**

1-800-331-4331

- **Canada**

1-888-869-6828

- **Puerto Rico**

1-877-855-8377

■ **Safety Connect Services Information**

- Phone calls using the vehicles Bluetooth® technology will not be possible during Safety Connect.
- Safety Connect is available beginning Fall 2009 on select Toyota models (in the contiguous United States only). Contact with the Safety Connect response center is dependent upon the telematics device being in operative condi-

tion, cellular connection availability, and GPS satellite signal reception, which can limit the ability to reach the response center or receive emergency service support. Enrollment and Telematics Subscription Service Agreement required. A variety of subscription terms is available; charges vary by subscription term selected and location.

- Automatic Collision Notification, Emergency Assistance and Stolen Vehicle Location will function in the United States, including Hawaii and Alaska, Puerto Rico and in Canada, and Enhanced Roadside Assistance will function in the United States, Puerto Rico and in Canada.
- Automatic Collision Notification, Emergency Assistance, Stolen Vehicle and Enhanced Road Assistance will not function in the United States Virgin Islands. For vehicles first sold in the USVI, no Safety Connect services will function in and outside the United States Virgin Islands.
- Safety Connect services are not subject to section 255 of the Telecommunications Act and the device is not TTY compatible.

■ **Languages**

The Safety Connect response center will offer support in multiple languages. The Safety Connect system will offer voice prompts in English, Spanish, and French. Please indicate your language of choice when enrolling.

■ **When contacting the response center**

You may be unable to contact the response center if the network is busy.

Safety Connect LED light Indicators

When the power switch is turned to ON, the red indicator light comes on for 2 seconds then turns off. Afterward, the green indicator light comes on, indicating that the service is active.

The following indicator light patterns indicate specific system usage conditions:

- Green indicator light on = Active service
- Green indicator light flashing = Safety Connect call in process
- Red indicator light (except at vehicle start-up) = System malfunction (contact your Toyota dealer)
- No indicator light (off) = Safety Connect service not active

Safety Connect services

■ Automatic Collision Notification

In case of either airbag deployment or severe rear-end collision, the system is designed to automatically call the response center. The responding agent receives the vehicle's location and attempts to speak with the vehicle occupants to assess the level of emergency. If the occu-

pants are unable to communicate, the agent automatically treats the call as an emergency, contacts the nearest emergency services provider to describe the situation, and requests that assistance be sent to the location.

■ Stolen Vehicle Location

If your vehicle is stolen, Safety Connect can work with local authorities to assist them in locating and recovering the vehicle. After filing a police report, call the Safety Connect response center at 1-800-331-4331 in the United States, 1-877-855-8377 in Puerto Rico or 1-888-869-6828 in Canada, and follow the prompts for Safety Connect to initiate this service.

In addition to assisting law enforcement with recovery of a stolen vehicle, Safety-Connect-equipped vehicle location data may, under certain circumstances, be shared with third parties to locate your vehicle. Further information is available at Toyota.com.

■ Emergency Assistance Button (“SOS”)

In the event of an emergency on the road, push the “SOS” button to reach the Safety Connect response center. The answering agent will determine your vehicle's location, assess the emergency, and dispatch the

necessary assistance required.

If you accidentally press the “SOS” button, tell the response-center agent that you are not experiencing an emergency.

■ **Enhanced Roadside Assistance**

Enhanced Roadside Assistance adds GPS data to the already included warranty-based Toyota roadside service.

Subscribers can press the “SOS” button to reach a Safety Connect response-center agent, who can help with a wide range of needs, such as: towing, flat tire, fuel delivery, etc. For a description of the Roadside Assistance services and their limitations, please see the Safety Connect Terms and Conditions, which are available at Toyota.com.

Safety information for Safety Connect

Important! Read this information about exposure to radio frequency signals before using Safety Connect;

The Safety Connect system installed in your vehicle is a low-power radio transmitter and receiver. It receives and also sends out radio frequency (RF) signals.

In August 1996, the Federal Communications Commission

(FCC) adopted RF exposure guidelines with safety levels for mobile wireless phones. Those guidelines are consistent with the safety standards previously set by the following U.S. and international standards bodies.

- ANSI (American National Standards Institute) C95.1 [1992]
- NCRP (National Council on Radiation Protection and Measurement) Report 86 [1986]
- ICNIRP (International Commission on Non-Ionizing Radiation Protection) [1996]

Those standards were based on comprehensive and periodic evaluations of the relevant scientific literature. Over 120 scientists, engineers, and physicians from universities, and government health agencies and industries reviewed the available body of research to develop the ANSI Standard (C95.1).

The design of Safety Connect complies with the FCC guidelines in addition to those standards.

■ **Free /Open Source Software Information**

This product contains Free/Open Source Software (FOSS). The License information and/or the source code of such FOSS can be found at the following

- ▶ Vehicles without Toyota Teammate Advanced Drive
<https://opensource.lge.com/osSch/list?types=ALL&search=TL21BNU>

Immobilizer system

The vehicle's keys have built-in transponder chips that prevent the fuel cell system from starting if a key has not been previously registered in the vehicle's on-board computer.

Never leave the keys inside the vehicle when you leave the vehicle.

This system is designed to help prevent vehicle theft but does not guarantee absolute security against all vehicle thefts.

Operating the system

The indicator light flashes after the power switch has been turned off to indicate that the system is operating.

The indicator light stops flashing after the power switch has been turned to ACC or ON to indicate that the system has been canceled.

System maintenance

The vehicle has a maintenance-free type immobilizer system.

Conditions that may cause the system to malfunction

- If the grip portion of the key is in contact with a metallic object
- If the key is in close proximity to or touching a key to the security system (key with a built-in transponder chip) of another vehicle

NOTICE

To ensure the system operates correctly

Do not modify or remove the system. If modified or removed, the proper operation of the system cannot be guaranteed.

Alarm

The alarm uses light and sound to give an alert when an intrusion is detected. The alarm is triggered in the following situations when the alarm is set:

- ▶ Except for Canada
 - A locked door or trunk is unlocked or opened in any way other than using the entry function, wireless remote control or mechanical key. (The doors will lock again automatically.)
 - The hood is opened.
- ▶ For Canada
 - A locked door or trunk is unlocked or opened in any way other than using the entry function or wireless remote control. (The doors will lock again automatically.)
 - The hood is opened.

Setting/deactivating/stopping the alarm system

■ Items to check before locking the vehicle

To prevent unexpected triggering of the alarm and vehicle theft, make sure of the following:

- Nobody is in the vehicle.

- The windows are closed before the alarm is set.
- No valuables or other personal items are left in the vehicle.

■ Setting

Close the doors, trunk and hood, and lock all the doors. The system will be set automatically after 30 seconds.

The indicator light changes from being on to flashing when the system is set.

■ Deactivating or stopping

Do one of the following to deactivate or stop the alarms:

- Vehicles with Toyota Teammate Advanced Drive: Unlock the doors.
- Vehicles with Toyota Teammate Advanced Drive: Unlock the trunk using the mechanical key.
- Vehicles without Toyota Teammate Advanced Drive: Unlock the doors or trunk using the entry function or wireless remote control.
- Turn the power switch to ACC

or ON, or start the fuel cell system. (The alarm will be deactivated or stopped after a few seconds.)

■ **Setting the alarm (Vehicles without Toyota Teammate Advanced Drive)**

The alarm can be set if all the doors are closed even with the hood open.

■ **System maintenance**

The vehicle has a maintenance-free type alarm system.

■ **Triggering of the alarm**

The alarm may be triggered in the following situations:
(Stopping the alarm deactivates the alarm system.)

- For Canada: The doors are unlocked using the mechanical key.

- For Canada: The trunk is opened using the mechanical key.

- A person inside the vehicle opens a door, the trunk or hood, or unlocks the vehicle.

- The 12-volt battery is recharged or replaced when the vehicle is locked. (→P.649)

■ **Alarm-operated door lock**

In the following cases, depending on the situation, the door may automatically lock to prevent improper entry into the vehicle:

- When a person remaining in the vehicle unlocks the door and the alarm is activated.
- While the alarm is activated, a person remaining in the vehicle unlocks the door.
- Vehicles without Toyota Teammate Advanced Drive: When recharging or replacing the 12-volt battery

■ **Customization**

Some functions can be customized. (→P.675)

⚠ NOTICE

■ **To ensure the system operates correctly**

Do not modify or remove the system. If modified or removed, the proper operation of the system cannot be guaranteed.

Pre-alarm (Vehicles without Toyota Teammate Advanced Drive)

If a door is unlocked with the mechanical key while the alarm is being set, the pre-alarm will sound for 10 seconds.

If either the door is locked again or the pre-alarm is stopped within those 10 seconds, an alarm will sound.

Do any of the following in order to deactivate or stop the pre-alarm:

- Close the doors, and lock all doors by smart key system or wireless remote control.
- Turn the power switch to ACC or ON, or start the fuel cell system. (The alarm will be deactivated and stop after a few seconds.)

Theft prevention labels (Except for Canada)

These labels are attached to the vehicle to reduce vehicle theft by facilitating the tracing and recovery of parts from stolen vehicles. Do not remove under the penalty of law.

87

2-1. Fuel cell electric vehicle

Fuel cell electric vehicle characteristics 88

Fuel cell electric vehicle precautions..... 93

Fuel cell electric vehicle driving tips 103

2

Fuel cell system

Fuel cell electric vehicle characteristics

Fuel cell electric vehicle efficiently use electricity, which is generated by a chemical reaction between hydrogen and oxygen in a fuel cell stack, and electricity charged in a traction battery to drive the electric motor (traction motor).

The fuel is H₂ (compressed hydrogen gas), so the exhaust is only water and water vapor. As they do not release emissions such as CO₂ (Carbon Dioxide) and NO_x (Nitrogen Oxides), fuel cell electric vehicles are environmentally friendly vehicles.

Fuel cell electric vehicle components

The illustration is an example for explanation and may differ from the actual item.

- A** Fuel cell stack
- B** Fuel cell converter and auxiliary inverter
- C** Hydrogen tanks
- D** Traction battery

E Electric motor (traction motor)

F Tailpipe

*: If equipped

■ Sounds unique to the fuel cell electric vehicle

Due to the design of your fuel cell electric vehicle, there are various relays, valves and pumps which under normal driving conditions will produce sounds. This is a normal characteristic of the vehicle and does not indicate a malfunction.

Furthermore, these sounds may differ based on usage environment or condition.

Noticeable sounds	Source of the sounds
Clunking, clicking and clacking	Operation of relays and hydrogen tank valves (Sounds may be heard when starting or stopping the fuel cell system.)
Knocking	The parking lock is engaged (Sounds may be heard when pressing the P position switch or stopping the fuel cell system.)
Whooshing, squealing	Gas is flowing through the nozzle and valves (Sounds may be heard when filling the fuel.)
<ul style="list-style-type: none"> • High pitch sound • Pulsing sound • Whooshing sound 	Operation of the pumps (In particular, sounds may be heard when starting the fuel cell system, accelerating from a stop, or pressing the H ₂ O switch. The sound may be louder when in Br mode or when the vehicle decelerates during dynamic radar cruise control.)
<ul style="list-style-type: none"> • Humming sound • High pitch sound 	Operation of the motor (In particular, sounds may be heard when accelerating or decelerating.)
Blowing and draining sound	Exhaust water or air is being purged May also occur periodically while parked when it is cold to prevent freezing. (Sounds may be heard when vehicle is stopped, fuel cell system is stopped or while parked)

2

Fuel cell system

■ Maintenance, repair, recycling, and disposal

Contact your Toyota dealer regarding maintenance, repair, recycling, and disposal. Do not dispose of the vehicle or any of its components yourself.

Driving the vehicle

The electric motor (traction motor) allows smooth, powerful takeoff and acceleration. This vehicle drives similarly to a gasoline vehicle without any special actions by the driver. (→P.208)

As there are no engine sounds and the vehicle is quiet, operation noises unique to fuel cell electric vehicle components may be heard. (→P.89)

■ Regenerative braking

In the following situations, the vehicle generates electricity from the deceleration of the vehicle while driving.

- The accelerator pedal is released while driving with the shift position in D.
- The brake pedal is depressed while driving with the shift position in D.

■ Charging the traction battery

Because electricity generated by the fuel cell stack and regenerative braking charges the traction battery, the battery does not need to be charged from an outside source. However, if the vehicle is left parked for a long time, the traction battery will slowly discharge. For this reason, be sure to drive the vehicle at least once every few months for at least 30 minutes or 10 miles (16 km).

If the traction battery becomes fully discharged and you are unable to start the fuel cell system, contact your Toyota dealer.

■ Charging the 12-volt battery

→P.649

■ Sounds and vibrations specific to a fuel cell electric vehicle

Because there is no engine sound or vibration, it is easy to mistake the fuel cell electric vehicle for being off when it is actually still running, as indicated by the "READY" indicator being illuminated. For safety, make sure to always shift the shift position to P and apply the parking brake when parked.

Fuel cell system

The system may behave differently on cold days as it may be performing a special cold-start process to improve the start up performance. (→P.219)

Operation noises (→P.89), purge process (→P.222), etc., may differ from usual. However, this is not a malfunction.

Fuel filling

Compressed hydrogen gas fuel can be filled at hydrogen stations.

More information about hydrogen fuel and fueling can be found in the "Opening the fuel door" section of this manual. (→P.253)

Acoustic vehicle alerting system

Fuel cell electric vehicles do not have engine sounds like gasoline vehicles. Therefore, a sound that changes in accordance with the driving speed, will be played in order to warn people nearby of the vehicle's approach. The sound will stop when the vehicle speed exceeds approximately 23 mph (37 km/h).

How to hear the warning

In the following cases, the acoustic vehicle alerting system may be difficult for surrounding people to hear.

- In very noisy areas
- In the wind or the rain

Also, as the acoustic vehicle alerting system is installed on the front of the vehicle, it may be more difficult to hear from the rear of the vehicle compared to the front.

Predictive efficient drive (vehicles with navigation system)*

*: This function can only be used in the mainland U.S.A. It cannot be used in other states and territories, including Alaska and Hawaii.

This system operates based on the driving situation and traffic information to enhance fuel economy.

For details about Predictive efficient drive, refer to "MULTIMEDIA OWNER'S MANUAL".

Predictive deceleration support

- When the vehicle approaches to predictive deceleration support points registered in the navigation system, the reference operation range **A** of the ECO Accelerator Guidance (→P.121, 145) on the multi-information display will be turned off to encourage the driver to reduce excessive acceleration.

▶ Vehicles without Toyota Teammate Advanced Drive

▶ Vehicles with Toyota Teammate Advanced Drive

- The regenerative braking force will be increased according to the driving conditions to more efficiently

charge the traction battery
after the accelerator pedal is
released.

Fuel cell electric vehicle precautions

System components

Hydrogen-related components

The fuel cell electric vehicle has hydrogen tanks (10150 psi [70 MPa, 714 kgf/cm², 700 bar]), fuel cell stack, and hydrogen pipelines as hydrogen-related components. Pay attention to all warning labels attached to the vehicle.

2

Fuel cell system

The illustration is an example for explanation and may differ from the actual item.

- A** Warning label
- B** Fuel cell stack (fuel cell and hydrogen pump)
- C** Hydrogen detectors
- D** Hydrogen tanks
- E** Hydrogen tank valves
- F** Hydrogen pipelines
- G** Hydrogen supply unit

*: If equipped

■ High-voltage and high-temperature components

The fuel cell electric vehicle has high-voltage components (about 650 V maximum) such as a fuel cell stack, traction battery, power control unit, fuel cell converter, high-voltage cables (which are distinguished from low-voltage cables by their orange covers), electric motor (traction motor), etc., and high-temperature parts such as the radiator for cooling. Pay attention to all warning labels attached to the vehicle.

This diagram is for illustrative purposes only and may differ from the actual vehicle.

- A** Warning label
- B** Radiator for inverter cooling
- C** Radiator for fuel cell stack cooling
- D** Fuel cell water pump
- E** Fuel cell converter and auxiliary inverter
- F** Power control unit
- G** Cabin coolant heater
- H** Traction battery
- I** Service plug

- J** Electric motor (traction motor)
- K** High-voltage cables (orange)
- L** Fuel cell stack (fuel cell and hydrogen pump)
- M** Air compressor
- N** Air conditioning compressor

■ If “Hydrogen Leakage Detected Visit Your Dealer” is displayed on the multi-information display

A small amount of hydrogen gas may be leaking. Have the vehicle inspected immediately at the nearest Toyota dealer.

■ If “FCV System Shutdown Due to Hydrogen Leakage Stop in a Safe Place See Owner’s Manual” is displayed on the multi-information display

- Hydrogen gas may be leaking. When hydrogen gas is leaking or some other malfunction is detected: →P.99
- The air conditioning system will shut off automatically.

■ Running out of fuel

When the vehicle has run out of fuel and the fuel cell system cannot be started, refuel the vehicle until the low fuel level warning light (→P.618) turns off before trying to restart. It may not be able to restart if the refueled amount is too low.

■ Fuel cell stack

- Depending on the usage environment, the fuel cell power output may decline over the life of the vehicle. However, this will have almost no effect on driving performance.
- In the following situations, the fuel cell power output may decline faster than normal driving:
 - Extended use in areas with high amounts of dust
 - Extended use in areas with high

levels of sulfur (such as volcanoes or hot springs).

- Extended use in areas with high concentrations of the following substances:

-Organic solvents, such as paint and thinner

-Amine-related materials such as ammonia

-Chlorinated substances such as salt air and snow-melting agent

- Salt water gets into the air cleaner filter

It is recommended to replace the air cleaner filter and clean the surrounding components. Have the vehicle inspected at your Toyota dealer

- The number of times the fuel cell system is started and stopped is excessively high
- Extended use in freezing temperatures
- Fill fuel with impurities which do not follow ISO-14687

■ Hydrogen tanks

- The hydrogen tanks are the high-pressure storage containers that are filled with compressed hydrogen gas. The vehicle can be refueled at hydrogen stations.
- The hydrogen tanks have an expiration date. Vehicles with expired hydrogen tanks must not be driven or refueled until the hydrogen tanks are replaced. The expiration date is written on the inside of the fuel door. Consult your Toyota dealer.
- Consult your Toyota dealer if the

hydrogen tanks or valves need to be disposed.

■ Fuel cell stack coolant

- Fuel cell stack coolant uses a specifically-designed fluid with high electrical insulation properties, in order to safely cool the high-voltage fuel cell stack.
- Never add water or other coolants to the fuel cell stack cooling system, as they will cause permanent damage.
- Consult your Toyota dealer for replenishing or changing the fuel cell stack coolant.

■ Ion filter

- An ion filter is installed in the coolant lines for the fuel cell stack, in order to maintain the normal insulation properties of the coolant.
- It is necessary to periodically change the ion filter. (→P.629)
Contact your Toyota dealer for this periodic maintenance.

■ Tailpipe

- When the power switch is turned off and the fuel cell system is stopped (→P.221) after driving, exhaust water is discharged. Be careful when standing behind the vehicle to avoid dripping or spraying.
- It is possible to manually purge the exhaust. This may be desirable, for instance, before parking in a garage. This is done by pressing the H₂O switch. (→P.236)
- On cold days, water vapor in the exhaust may appear as a white mist emitted from the tailpipe. This is not a malfunction. A white mist may be emitted from the vehicle side depending on the wind direction. If it is a concern, consult with a Toyota dealer.
- If the tailpipe is blocked, the fuel cell system will stop.
- In the following state when cold, a

white mist may be emitted. Water vapor is being emitted as a system protection and it is not a malfunction.

- If several minutes have passed after opening the fuel lid, such as refueling.
- Several hours have passed after the power switch was turned off.

■ Hydrogen detectors

When the power switch is turned on, the hydrogen detectors are activated.

■ Power output restriction

When the power output is restricted, the vehicle may fail to accelerate or even decelerate, even though the accelerator pedal is depressed. If a safe driving speed cannot be maintained, stop the vehicle in a safe place away from the traffic. This may be caused by the following conditions:

- The coolant temperature may be too high. This can be caused by driving conditions such as repeated sudden acceleration and deceleration, continuous driving on an incline, continuous driving at high altitudes with a high load, etc. In such situations, "FCV system overheated Output power reduced" is displayed on the multi-information display, and the power output is restricted. Once the coolant returns to normal temperature, the power output will return to normal. (→P.623)
- The remaining fuel may be low. After the low fuel level warning light comes on, the output power will be gradually restricted in order to extend the possible driving distance. Once getting to this point, the remaining driving distance possible is short. Immediately refill the vehicle with hydrogen.
- On cold days, the low fuel level warning light comes on faster than usual and the output power is restricted.

■ Electromagnetic waves (EMF)

- High-voltage parts and cables in fuel cell electric vehicles have an electromagnetic shielding configuration, and therefore emit approximately the same amount of electromagnetic waves as conventional gasoline-powered vehicles or home electronic appliances.
- Your vehicle may cause sound interference in some third party-produced radio parts.

■ Starting the fuel cell system in an extremely cold environment

When the traction battery is

■ Hydrogen Gas Characteristics

- Hydrogen gas ignites more easily than gasoline, however it is light than air and disperses quickly. The hydrogen system and tank sufficiently serve as a counter-measure to prevent gas leaks. However, if by chance there is a gas leak, the hydrogen gas is rapidly diluted until it is no longer flammable.
- As with gasoline and natural gas, hydrogen gas is not dangerous if it is handled properly. Thoroughly read and understand the characteristics shown in the table below.

extremely cold (below approximately -22°F [-30°C]) under the influence of outside temperature, it may not be possible to start the fuel cell system. In this case, try to start the fuel cell system again after the temperature of the traction battery increases due to the outside temperature increase etc.

■ Traction battery

The traction battery has a limited service life. The lifespan of the traction battery can change according to driving style and driving conditions.

2

Fuel cell system

	Hydrogen gas	LPG (Liquid Petroleum Gas)	Gasoline
Normal state	Gaseous (Lighter than air)	Gaseous (Heavier than air)	Volatile liquid (evaporates easily) (Heavier than air)
Ease of ignition	Easier than gasoline	At the same level as gasoline	—

	Hydrogen gas	LPG (Liquid Petroleum Gas)	Gasoline
Ease of accumulation	<ul style="list-style-type: none"> • Disperses upward and is diluted to safe concentrations in open air • Does not adhere to clothing 	<ul style="list-style-type: none"> • Spreads on the ground or floor • Does not adhere to clothing 	<ul style="list-style-type: none"> • Spreads on the ground or floor • Adheres to clothing
Detectability	<ul style="list-style-type: none"> • Due to its colorless and odorless state, difficult to detect by sight or smell • Vehicle hydrogen detectors will display a warning on the multi-information display 	<ul style="list-style-type: none"> • Detectable by odor and gas leaking noise 	<ul style="list-style-type: none"> • Detectable by color and odor

■ **Basic concepts of hydrogen safety**

● **Prevent leakage**

The pipe joints of the hydrogen pipelines are designed to prevent leaks.

The joints are checked for gas leakage at every official vehicle inspection.

● **Detect to stop leakage**

- The vehicle is equipped with hydrogen detectors. If the hydrogen detectors detect a leak, the hydrogen tank valves automatically close to prevent more hydrogen from escaping.
- The vehicle is equipped with a collision sensor. If the collision sensor detects a collision, the hydrogen tank valves automatically close to prevent hydrogen gas from leaking from any dam-

aged components.

● **Disperse the leaked hydrogen gas**

The hydrogen tanks and pipelines are located outside of the passenger compartment, so any leaked gas will disperse into the atmosphere by design.

● **Eliminate sources of fire**

No source of fire is located near the hydrogen pipelines by design.

WARNING

■ **Hydrogen-related components**

- **Never alter, customize, or disassemble any hydrogen-related parts.**

WARNING

- The hydrogen tanks, fuel cell stack, hydrogen pipelines, and connecting components are filled with hydrogen gas. Do not remove or disassemble these parts. Doing so can cause a hydrogen gas leak, resulting in fire or explosion of the vehicle, which may result in death or serious injury.

■ When hydrogen gas leak or other malfunction is detected

- If a large amount of hydrogen gas leaking is noticed, turn off the power switch, exit the vehicle, and stay far away from it. Display warning signs and keep sources of fire away from the vehicle. If possible, get assistance. When the above is done, immediately contact your Toyota dealer.
- If you notice gas leaking or any other malfunction, immediately stop the vehicle in a safe and well-ventilated place, exit the vehicle, and stay far away from it.
- If a warning message is displayed in the multi-information display, immediately stop the vehicle in a safe, well-ventilated outdoor place.

■ Tailpipe

- Do not directly touch the water or steam coming out of the tailpipe. Doing so may cause low-temperature burns.
- The fuel cell electric vehicle generates water during power generation. The generated water discharged from the tailpipe is not suitable for drinking. Never drink the water coming out of the tailpipe.

- You may notice a strange odor from the tailpipe for a while after the purchase of a new vehicle or after an extended period of non-use, but this is not a malfunction. Also, the odor is harmless but it may be unpleasant, so do not breathe in the exhaust.

■ High-voltage and high-temperature precautions

This vehicle is equipped with a high-voltage system. Follow the instructions below as high-voltages can cause severe burns and electric shock that may result in death or serious injury.

- Never touch, disassemble, remove, or replace the high-voltage parts, cables (orange), or connectors.
- The components inside the fuel cell unit compartment will become hot during operation. Be careful of both the high-voltage and high-temperature, and always obey the warning labels on the vehicle.
- Never touch the service plug that is installed on the traction battery. The service plug is used to block high-voltages coming from the traction battery during maintenance or repair at your Toyota dealer.

WARNING

■ **Road accident cautions**

In the event of an accident, observe the following precautions. Failure to do so can cause fire or electric shocks, resulting in death or serious injury.

- Stop the vehicle in a safe place to prevent subsequent accidents. Shift the shift position to P and apply the parking brake.
- Check for hydrogen gas leakage. Hydrogen leaks will cause a warning message to be shown on the multi-information display. Larger leaks may also be audible.
- If a large amount of hydrogen gas leaking is noticed, turn off the power switch, exit the vehicle, and stay far away from it. Display warning signs and keep sources of fire away from the vehicle. If possible, get assistance. When the above is done, immediately contact your Toyota dealer.
- Do not touch the high-voltage parts, cables (orange), or connectors.
- If electric wires are exposed inside or outside your vehicle, an electric shock may occur. Never touch exposed electric wires.
- If a fluid leak occurs, do not touch the fluid as it may be the carbonate ester-based organic electrolyte from the traction battery. If it comes into contact with your skin or eyes, wash it off immediately with a large amount of water, and seek immediate medical attention.

- In case of a vehicle fire, the hydrogen gas in the hydrogen tanks is released angled downward on both the right side of the vehicle as well as the rear of the vehicle, in order to reduce damage to the hydrogen tanks. Keep away from the vehicle and do not stand on either the right side or the rear of the vehicle.

- If a vehicle fire occurs, it can be extinguished with a Class A, B, or C fire extinguisher. If using water, apply a large amount from a hydrant.

- If your vehicle needs to be towed, do so with the rear wheels lifted. If the wheels are touching the ground, the electric motor (traction motor) may continue to generate electricity. This may cause a fire.

■ **Traction battery**

- Never resell, transfer, or modify the traction battery. To prevent accidents, traction batteries that have been removed from disposed vehicle are collected through Toyota dealers. Do not dispose of the traction battery yourself.

If the traction battery is not properly collected, the following may occur, resulting in death or serious injury:

- The traction battery may be illegally disposed or dumped, and it is hazardous to the environment. Additionally, someone may touch a high-voltage part, resulting in an electric shock.

⚠ WARNING

- The traction battery is intended to be used exclusively with your fuel cell electric vehicle. If the traction battery is used outside of your vehicle or modified in any way, accidents, such as electric shock, heat generation, smoke generation, ignition, explosion and electrolyte leakage may occur.

In particular, reselling or transferring the traction battery exposes the receiving party to risks of accidents as they may not be aware of these dangers. Make sure to inform them of the contents of this Owner's Manual.

- If your vehicle is disposed without the traction battery having been removed, there is a danger of serious electric shock in case high-voltage parts, cables, or their connectors are touched. (→P.94)

When disposing of your vehicle, the traction battery must be disposed by your Toyota dealer, or a qualified service shop. If the traction battery is not disposed of properly, it may cause electric shock that can result in death or serious injury.

⚠ NOTICE

■ **Traction battery**

Do not carry large amounts of water such as water cooler bottles in the vehicle. If water spills onto the traction battery, the battery may be damaged. Have the vehicle inspected by your Toyota dealer.

■ **Fuel cell stack coolant**

Never add water or other coolants to the fuel cell stack cooling system, as they will cause permanent damage.

Emergency shut off system

When a certain level of impact from an accident is detected, the fuel cell system is shut down and the system shuts out the high voltage.

Also, the fuel supply is stopped from the hydrogen tank valves. If the emergency shut off system activates, your vehicle will not restart. To restart the fuel cell system, contact your Toyota dealer.

If the Emergency shut off System does not operate, the fuel cell system can be forcibly stopped by performing the following operations*.

*: Use only in emergencies.

- Press and hold the power switch for 5 seconds or more.

If the fuel cell system is forcibly stopped, the meter screen display will turn off.

If the fuel cell system is forcibly stopped, it may take a long time to start the next time or it may not be possible to start the system.

Repeatedly stopping the fuel cell system in this manner may result in reduced power output.

Fuel cell warning message

A message is automatically displayed when a malfunction occurs in the fuel cell system or an improper operation is attempted. (→P.622)

If a warning message is shown on the multi-information display, read the message and follow the instructions.

■ **If a warning light comes on, a warning message is displayed, or the 12-volt battery connection is disconnected**

The fuel cell system may not be able to restart.

If the “READY” indicator does not come on, even when the start procedure is repeated, contact your Toyota dealer.

Traction battery air intake vents

There are air intake vents on each side of the rear seatback with the purpose of cooling the traction battery. If the vents are blocked, it may interfere with the cooling of the traction battery.

If input/output of the traction battery becomes limited and the distance that the vehicle can be driven using the traction motor is reduced, the fuel economy may be reduced.

 NOTICE

■ **Traction battery air intake vents**

- Make sure not to block the air intake vents with anything, such as cover, or luggage. The input/output of the traction battery may be restricted, leading to a reduction in traction battery output and a malfunction.
- Periodically clean the air intake vents to prevent them from clogging. (→P.589)
- Do not get water or foreign materials in the air intake vents as this may cause a short circuit and damage the traction battery.

Fuel cell electric vehicle driving tips

To maximize fuel economy and range, pay attention to the following:

Use of Fuel cell System Indicator

Maintaining the Fuel cell System Indicator to Eco area on the multi-information display can extend your driving range. (→P.115, 141)

Accelerator pedal/brake pedal operation

Drive your vehicle smoothly. Avoid abrupt acceleration and deceleration. Mild acceleration and deceleration can help curb wasteful fuel consumption.

When braking

If the brakes are operated gently and in a timely manner, a greater amount of electrical energy can be regenerated when slowing down.

Delays

Repeated acceleration and deceleration, as well as long waits at traffic lights, will lead to

decreased fuel economy. Check traffic reports before leaving and avoid delays as much as possible. When driving in a congested traffic situations, gently release the brake pedal to allow the vehicle to move forward slightly while avoiding overuse of the accelerator pedal. Doing so can help control excessive fuel consumption.

Driving with high power output

Similar to an electric vehicle, a fuel cell electric vehicle uses the most fuel in high output driving such as driving on a steep uphill or at high speeds. Moderate the vehicle speed and maintain a steady speed.

Using Eco drive mode

When using Eco drive mode, the torque corresponding to the accelerator pedal depression amount can be generated more smoothly than it is in normal conditions. In addition, the operation of the air conditioning system (heating/cooling) will be minimized, improving the fuel economy. (→P.462)

Air conditioning

- Use the air conditioning only when necessary. Doing so

can help reduce excessive fuel consumption.

In summer: When the ambient temperature is high, use the recirculated air mode. Doing so will help to reduce the burden on the air conditioning system and reduce fuel consumption as well.

In winter: Avoid excess heating. Use the seat heater (if equipped) or steering heater (if equipped) to minimize the need for cabin heating (→P.486).

- Using eco air conditioning mode, this helps curb fuel consumption even with the air conditioning system turned on. (→P.476)

reduce fuel economy.

Checking tire inflation pressure

Make sure to check the tire inflation pressure frequently.

Improper tire inflation pressure can cause poor fuel economy.

Also, as snow tires can cause large amounts of friction, their use on dry roads can lead to poor fuel economy. Use tires that are appropriate for the season.

Luggage

Carrying heavy luggage will lead to reduced fuel economy. Installing a large roof rack will also

Vehicle status information and indicators

Vehicle status information and indicators

Warning lights and indicators

The warning lights and indicators on the instrument cluster, center panel and outside rear view mirrors inform the driver of the status of the vehicle's various systems.

Instrument cluster

For the purpose of explanation, the following illustrations display all warning lights and indicators illuminated.

The meter type can be changed on  of the multi-information display. (→P.124)

- Type 1

The units used on the meters and some indicators may differ depending on the target region.

● Type 2

The units used on the meters and some indicators may differ depending on the target region.

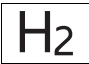

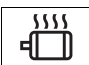

● Type 3

The units used on the meters and some indicators may differ depending on the target region.

Warning lights

Warning lights inform the driver of malfunctions in the indicated vehicle's systems.

	Hydrogen leak warning light* ¹ (→P.610)		Electric power steering system warning light* ¹ (→P.612)
	Brake system warning light* ¹ (→P.610)		PCS warning light* ¹ (→P.613)
	Brake system warning light* ¹ (→P.610)		LDA indicator (→P.613)
	Brake system warning light* ¹ (→P.610)		LTA indicator (→P.614)
	High coolant temperature warning light (→P.611)		PDA indicator (→P.614)
	Fuel cell system overheat warning light* ² (→P.611)		Dynamic radar cruise control indicator (→P.615)
	Charging system warning light* ² (→P.611)		Cruise control indicator (→P.615)
	SRS warning light* ¹ (→P.611)		Driving assist information indicator* ¹ (→P.614)
	Pop Up Hood warning light* ¹ (→P.611)		Intuitive parking assist OFF indicator* ¹ (if equipped) (→P.615)
	ABS warning light* ¹ (→P.612)		Slip indicator light* ¹ (→P.617)
	ABS warning light* ¹ (→P.612)		Inappropriate pedal operation warning light* ² (→P.617)
	Electric power steering system warning light* ¹ (→P.612)		Brake hold operated indicator* ¹ (→P.618)
			Parking brake indicator (→P.618)

(Canada)
(Flashes)

Parking brake indicator (→P.618)

Tire pressure warning light^{*1} (→P.618)

Low fuel level warning light (→P.618)

Driver's and front passenger's seat belt reminder light (→P.619)

Rear passengers' seat belt reminder lights (→P.619)

^{*1}: These lights turn on when the power switch is turned to ON to indicate that a system check is being performed. They will turn off after the fuel cell system is on, or after a few seconds. There may be a malfunction in a system if the light does not come on, or turn off. Have the vehicle inspected by your Toyota dealer.

^{*2}: This light illuminates on the multi-information display with a message.

NOTICE

■ To prevent damage to the fuel cell system and its components

This vehicle is equipped with high coolant temperature warning light (→P.652), instead of, coolant temperature gauge.

The fuel cell system may be overheating if the high coolant temperature warning light flashes or comes on. In this case, immediately stop the vehicle in a safe place, and check the fuel cell system after it has cooled completely.

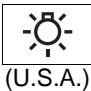

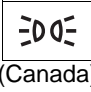

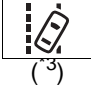

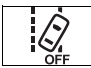

WARNING

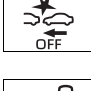

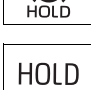

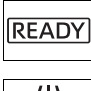

■ If a safety system warning light does not come on

Should a safety system light such as the ABS and SRS warning light not come on when you start the fuel cell system, this could mean that these systems are not available to help protect you in an accident, which could result in death or serious injury. Have the vehicle inspected by your Toyota dealer immediately if this occurs.

Indicators

The indicators inform the driver of the operating state of the vehicle's various systems.

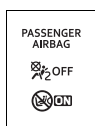

-  Turn signal indicator (→P.230)

^{*1}: Indicates the coolant temperature is cool.

^{*2}: This light illuminates on the multi-information display with a message.

^{*3}: Depending on the operating conditions of the system, the color and state (illuminated/blinking) of the indicator change.

^{*4}: The light comes on when the system is turned off.

^{*5}: Vehicles without multimedia display or rear camera.

^{*6}: These lights turn on when the power switch is turned to ON to indicate that a system check is being performed. They will turn off after the fuel cell system is on, or after a few seconds. There may be a malfunction in a system if the lights do not turn on, or turn off. Have the vehicle inspected by your Toyota dealer.

^{*7}: This light illuminates on the outside rear view mirrors.

^{*8}: This light illuminates on the cen-

ter panel.

^{*9}: When the outside temperature is approximately 37°F (3°C) or lower, the indicator will flash for approximately 10 seconds, then stay on.

■ Intuitive parking assist OFF indicator

Vehicles without multimedia display: The indicators turn off when the shift position is changed to R regardless of whether the intuitive parking assist function is turned on or off.

■ Stop lights indicator

This light comes on when the stop lights are illuminated by the operation of the brake pedal or the driving assist system.

Gauges and meters

The meters display various drive information.

Meter display

■ Locations of gauges and meters

The meter type can be changed on  of the multi-information display. (→P.124)

▶ Type 1/Type 2

The units of measure may differ depending on the intended destination of the vehicle.

A Multi-information display

Presents the driver with a variety of vehicle data. (→P.118)

Displays warning messages if a malfunction occurs. (→P.622)

B Shift position indicator (→P.225)

C Outside temperature(→P.115)

D Analog meter (Type 2 only)

The dial type of analog meter can be changed on  of the multi-information display. (→P.124)

Analog speedometer: Displays the vehicle speed.

Fuel cell System Indicator: Displays the Fuel cell System Indicator. (→P.115)

E Digital speedometer

Displays the vehicle speed.

F Clock (→P.117)

Automatically adjusts the time by using the GPS time information (GPS clock).

For details, refer to “MULTIMEDIA OWNER’S MANUAL”.

G Widget (Audio system-linked display)

Displays the selected audio source or track on the meter. (→P.123)

While list of items for content display area (→P.120) is displayed, widget will not be displayed.

H Distance to empty

Displays the possible driving distance computed from the fuel consumption studied from the driving history and the current remaining amount of fuel.

(→P.116)

I Fuel gauge

Displays the fuel level.

J Widget (Fuel Economy)

Displays fuel economy information. (→P.121)

While list of items for content display area (→P.120) is displayed, widget will not be displayed.

K Fuel cell System Indicator

Displays the Fuel cell System Indicator (→P.115)

L Odometer and trip meter (→P.116)

► Type 3

The units of measure may differ depending on the intended destination of the vehicle.

A Fuel cell System Indicator

Displays the Fuel cell System Indicator (→P.115)

B Shift position indicator (→P.225)

C Multi-information display

Presents the driver with a variety of vehicle data. (→P.118)

Displays warning messages if a malfunction occurs. (→P.622)

D Outside temperature (→P.115)

E Digital speedometer

Displays the vehicle speed.

F Clock (→P.117)

Automatically adjusts the time by using the GPS time information (GPS clock).

For details, refer to “MULTIMEDIA OWNER’S MANUAL”.

G Analog speedometer

Displays the vehicle speed.

H Distance to empty

Displays the possible driving distance computed from the fuel consumption studied from the driving history and the current remaining amount of fuel.

(→P.116)

I Fuel gauge

Displays the fuel level.

J Odometer and trip meter (→P.116)

■ **The meters and display illuminate when**

The power switch is in ON.

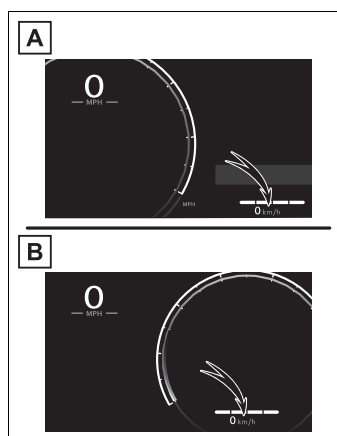

■ **When changing driving mode**

Background color is changed following the selected driving mode.

(→P.462, 463)

■ **If the units of measure for speedometer can be changed**

The other units of measure is also displayed as shown in the illustrations.

A Type 1/Type 2

B Type 3**Fuel cell System Indicator****A** Charge area

Shows regeneration* status.
Regenerated energy will be used to charge the traction battery.

B Eco area

Shows that the vehicle is being driven in an Eco-friendly manner.
By keeping the indicator needle or bar display within Eco area, more Eco-friendly driving can be achieved.

C Power area

Shows that an Eco-friendly driving range is being exceeded (during full power driving, etc.)

*: When used in this manual, regeneration refers to the conversion of energy created by the movement of the vehicle into electrical energy.

In the following situation, the Fuel cell System Indicator does not operate.

- “READY” Indicator is not illuminated.
- The shift position is in a range other than D or Br mode.

Outside temperature display

- In the following situations, the correct outside temperature may not be displayed, or the display may take longer than normal to change.
 - When stopped, or driving at low speeds (less than 12 mph [20 km/h])
 - When the outside temperature has changed suddenly (at the entrance/exit of a garage, tunnel, etc.)
- When “-” or “E” is displayed, the system may be malfunctioning. Take your vehicle to your Toyota dealer.
- Displays the outside temperature within the range of -40°F (-40°C) to 122°F (50°C).
- When the outside temperature is approximately 37°F (3°C) or lower, the indicator will flash for approximately 10 seconds, then stay on.
- **Distance to empty**
 - Displays the possible driving distance computed from the fuel consumption studied from the driving history and the current remaining amount of fuel.
 - When the air conditioning system is operating, is displayed below the driving range and this will be the driving range with the air conditioning system on is displayed.
 - The actual possible driving distance may differ as fuel consumption changes, depending on driving environment (weather, traffic, etc.) and conditions (sudden acceleration, air conditioning,

etc.).

- The driving range may shorten even when not driving due to power consumption by the system.
- The possible driving distance will be displayed as “--- mi (--- km)” in the following cases:
 - When the remaining fuel is being calculated (short time).
 - When the remaining fuel total reaches “E”.
 - When a malfunction occurs where the possible driving distance cannot be calculated.

■ **Liquid crystal display**

→P.119

■ **Free/Open Source Software Information**

This product contains Free/Open Source Software (FOSS). The license information and/or the source code of such FOSS can be found at the following URL.

<https://www.yazaki-group.com/rd-tech/oss/880>

■ **Customization**

The gauges and meters can be customized in  of the multi-information display. (→P.674)

 **WARNING**

■ **The information display at low temperatures**

Allow the interior of the vehicle to warm up before using the liquid crystal information display. At extremely low temperatures, the information display monitor may respond slowly, and display changes may be delayed.

Odometer and trip meter display

■ **Display items**

- Odometer

Displays the total distance the vehicle has been driven.

- Trip meter A/Trip meter B

Displays the distance the vehicle has been driven since the meter was last reset. Trip meters A and B can be used to record and display different distances independently.

■ **Changing the display**

Each time the “ODO/TRIP” switch is pressed, the displayed item will be changed. When the trip meter is displayed, pressing and holding the switch will reset the trip meter.

Instrument panel light control

The brightness of the instrument panel lights can be adjusted.

- 1 Brighter
- 2 Darker

■ Instrument cluster brightness adjustment

The instrument cluster brightness levels when the tail lights are on and off can be adjusted individually. However, when the surroundings are bright (daytime, etc.), turning on the tail lights will not change the instrument cluster brightness.

■ Adjusting the clock

The clocks on the following can be adjusted on the multimedia system screen.

- Multi-information display
- Multimedia system screen

For details, refer to “MULTIMEDIA OWNER’S MANUAL”.

■ Clock settings screen

If “Clock :00” is displayed when  is selected on the multi-information display, the system may be malfunctioning.

Have the vehicle inspected by your Toyota dealer.

Multi-information display

The multi-information display is used to display fuel efficiency related information and various types of driving-related information. The multi-information display can also be used to change the display settings and other settings.

Display contents

Following information is displayed in each area on the multi-information display.

- A** Content display area (left)
- B** Content display area (center)
- C** Content display area (right)
- D** Driving support system information display area

When driving information support system is displayed on the content

display area, the system operating state will not be displayed in this area.

E RSA (Road Sign Assist) display area (→P.303)

■ **Content display area (center)**

- Blank
- Driving support system information display (→P.122)
- Settings display (→P.124)
- Warning message display
- Map display (→P.123)

■ **Content display area (left)**

- Blank
- Fuel Economy (→P.121)
- Energy monitor (→P.130)

■ **Content display area (right)**

- Blank
- Fuel Economy (→P.121)
- ECO Accelerator Guidance/Eco Score (→P.121)
- Driving support system information display (→P.122)
- Navigation system-linked display (→P.123)
- Audio system-linked display (→P.123)
- Drive information (→P.123)
- Trip meter A/Trip meter B (→P.123)
- Energy monitor (→P.124)
- Tire inflation pressure (→P.124)

■ **Liquid crystal display**

Small spots or light spots may appear on the display. This phenomenon is characteristic of liquid crystal displays, and there is no problem continuing to use the display.

WARNING

■ **Caution for use while driving**

- When operating the multi-information display while driving, pay extra attention to the safety of the area around the vehicle.
- Do not look continuously at the multi-information display while driving as you may fail to see pedestrians, objects on the road, etc., ahead of the vehicle.

■ **The information display at low temperatures**

→P.116

Changing the display

The multi-information display is operated using the meter control switches.

A \wedge / \vee : Change displayed content and scroll up/down the screen

\langle / \rangle : Change the screen and move the cursor

- B** Press: Enter/Set
Press and hold: Reset/Display customizable items
- C** Return to the previous screen
- D** Call sending/receiving and history display
Linked with the hands-free system, sending or receiving call is displayed. For details regarding the hands-free system, refer to "MULTIMEDIA OWNER'S MANUAL".

WARNING

■ Caution for use while driving

For safety, avoid operating the meter control switch while driving as much as possible, and do not look continuously at the multi-information display while driving. Stop the vehicle and operate the meter control switch. Failure to do so may cause a steering wheel operation error, resulting in an unexpected accident.

Changing the display

The multi-information display is operated using the meter control switches.

■ Changing the meter display type setting

The meter display type setting can be changed on .

(→P.124)

■ Changing the screen

Select items from the combination of 3 screens to display on

each 3 content display areas.

Press < or > of the meter control switches to scroll the screen.

■ Changing the display contents

Switches items displayed on each contents display area (left/center/right).

- 1** Press and hold OK to display the cursor on the content display area (center).
- 2** Press < or > to move the cursor and select the content display area.
- 3** Press ^ or v to select the display items.

■ Items displayed in the content display area

Select items to enable/disable on the content display area (right).

- 1 Press and hold OK to display area (center).
- 2 Press < or > to move the cursor and select the content display area.
- 3 Press > to display contents list.
- 4 Press ^ or v to select the display items.
- 5 Press OK to enable/disable items.

⚠ WARNING

■ Caution for use while driving

For safety, avoid operating the meter control switches while driving as much as possible, and do not look continuously at the multi-information display while driving. Stop the vehicle and operate the meter control switches. Failure to do so may cause a steering wheel operation error, resulting in an unexpected accident.

Fuel Economy

A Current fuel economy
Displays the instantaneous current

fuel Economy.

B Average fuel economy
Displays the average fuel economy since the function was reset or the average fuel economy after starting or refueling.*1, 2, 3

The average fuel economy selected by Fuel Economy on the ⚙ screen is displayed.

*1: Use the displayed fuel consumption as a reference only.

*2: Average fuel economy after starting is reset each time the Fuel cell system stops.

*3: Average fuel economy since function was reset can be reset by pressing and holding OK.

ECO Accelerator Guidance/Eco Score

Displays a reference operation range for using the accelerator pedal according to driving conditions, and a score result that evaluates the current driving status.

A ECO Accelerator Guidance

B Eco score

■ **ECO Accelerator Guidance**

A Eco area

Show that the vehicle is being driven in an Eco-friendly manner.

B Power area

Shows that an Eco-friendly driving range is being exceeded (during full power driving etc.).

C Current acceleration

D Reference operation range

A zone is displayed in green under the Eco area which can be used as a reference operation range for using the accelerator pedal according to driving conditions such as starting off and cruising.

The ECO Accelerator Guidance display changes according to the driving status, such as when starting off or cruising. It is easier to drive in an Eco-friendly manner by driving according to the display showing the accelerator pedal operations and staying within the reference operating range.

■ **Eco Score**

The following 3 Eco driving methods are evaluated in 5 levels: Smooth start-off accelera-

tion, driving without sudden acceleration, and smooth stopping. When the vehicle is stopped, an Eco score out of 100 points will be displayed.

A Score result

B Eco start status

C Eco cruise status

D Eco stop status

3 situations are displayed with each icon while driving.

● **How to read the bar display**

A Not yet evaluated

B Low

C High

- After the Fuel cell system is started, the Eco score will not be displayed until the vehicle speed exceeds approximately 19 mph

(30 km/h).

- The Eco score will be reset each time the Fuel cell system is started.

ECO Accelerator Guidance/Eco score will not operate when

The ECO Accelerator Guidance/Eco score will not operate in the following situations:

- The Fuel cell System Indicator is not operating.
- The vehicle is being driven using the dynamic radar cruise control.

Driving support system information display

Select to display the operational status of the following systems:

- LDA (Lane Departure Alert) (→P.289)
- LTA (Lane Tracing Assist) (→P.281)
- LCA (Lane Change Assist) (→P.286)
- Dynamic radar cruise control (→P.305)
- Cruise control (→P.317)
- PDA (Proactive driving assist) (→P.294)
- PCS (Pre-Collision System) (→P.269)
- FCTA (Front Cross Traffic Alert) (→P.300)

Map display

Displays the map data accord-

ing to the navigation system.

Switches the displayed map size by pressing OK .

Navigation system-linked display

Select to display the following navigation system-linked information:

- Route guidance to destination
- Compass display (heading-up display)

Audio system-linked display

The operating conditions of the audio system can be displayed on the multi-information display.

Driving information display

Drive information

2 items that are selected using the “Drive Info. Items” setting (average speed, distance and total time) can be displayed vertically.

Use the displayed information as a reference only.

Following items will be displayed.

- “Average Speed”: Displays the average vehicle speed since Fuel cell system start*

- “Distance”: Displays the distance driven since Fuel cell system start*
- “Total Time”: Displays the elapsed time since Fuel cell system start*

*: These items are reset each time the Fuel cell system stops.

■ Trip information

2 items that are selected using the “TRIP A Items” or “TRIP B Items” setting (average speed, distance and total time) can be displayed vertically.

Use the displayed information as a reference only.

- “Average Speed”: Displays the average vehicle speed since the display was reset*
- “Distance”: Displays the distance driven since the display was reset*
- “Total Time”: Displays the elapsed time since the display was reset*

*: To reset, display the desired item and press and hold OK .

■ Energy monitor

→P.130

■ Tire inflation pressure

Displays inflation pressure of each tire.

■ Settings display

■ Meter display settings that can be changed

- Language

Select to change the language displayed.

- Units

Select to change the units of measure displayed.

- Meter Type

Select to change the meter type setting.

- Meter Style

Select to change the meter style.

- Dial Type

Select to change dial type.

- Fuel economy display

Select to change the average fuel consumption display between after start/after reset/after refuel. (→P.121)

- Fuel cell system

Select to display/not display the Eco Accelerator Guidance. (→P.121)

- Drive information and Trip A/B items

Select to set the first and second items of the drive information display to any of the following: average vehicle speed/distance/elapsed time.

- Pop-up display

Select to enable/disable pop-up displays for each relevant system.

- Default setting

Select to reset the meter display settings to the default setting.

■ **Vehicle functions and settings that can be changed**

→P.674

■ **Suspension of the settings display**

- Some settings cannot be changed while driving. When changing settings, park the vehicle in a safe place.
- If a warning message is displayed, operation of the settings display will be suspended.

	<p>NOTICE</p>
<p>■ During setting up the display</p> <p>To prevent 12-volt battery discharge, ensure that the Fuel cell system is operating while setting up the display features.</p>	

Warning message display

Select to display warning messages and measures to be taken if a malfunction is detected. (→P.622)

Suggestion function

Displays suggestions to the driver in the following situations. To select a response to a displayed suggestion, use the meter control switches.

■ **Suggestion to close the power windows (Driving at high speeds)**

If the vehicle speed exceeds a

certain speed with a power window open, a suggestion message will be displayed asking if you wish to close the power windows.

To close all of the power windows, select “Yes”.

■ **Suggestion to turn on the headlights**

If the headlight switch is in other than  or AUTO, and the vehicle speed is 3 mph (5 km/h) or higher for a certain amount of time when the surroundings are dark, a suggestion message will be displayed.

■ **Suggestion to turn off the headlights**

If the headlights are left on for a certain amount of time after the power switch has been turned off, a suggestion message will be displayed.

If the driver’s door is opened after the power switch is turned off, this suggestion message will not be displayed.

■ **Suggestion to close the power windows (linked to windshield wiper operation)**

If the windshield wipers are operated with a power window open, a suggestion message will be displayed asking if you wish to close the power windows. To close all of the power windows, select “Yes”.

■ **Customization**

The suggestion function can be turned on/off. (Customizable features: →P.674)

Head-up display

The head-up display projects a variety of driving-related information and the operating state of the driving support systems on the windshield.

System components

The meter display type setting of head-up display can be changed. (→P.127)

The content displayed will defer according to the driving conditions and display mode of the head-up display. Depending on the situation, pop-up displays will also be displayed.

■ **Full**

Illustrations used in this text are

3

Vehicle status information and indicators

intended as examples, and may differ from the image that is actually displayed by the head-up display.

- A Driving support system display area/Navigation system-linked display area/Fuel cell system indicator display area
- B Driving support system display area
- C Speedometer
- D Shift position
- E RSA (Road Sign Assist) display

■ Standard

Illustrations used in this text are intended as examples, and may differ from the image that is actually displayed by the head-up display.

- A Driving support system display area
- B Speedometer
- C Shift position
- D RSA (Road Sign Assist) display

■ Minimum

- A Speedometer

■ Head-up display will operate when

The power switch is in ON.

■ When using the head-up display

The head-up display may seem dark or hard to see when viewed through sunglasses, especially polarized sunglasses. Adjust the brightness of the head-up display or remove your sunglasses.

■ Street name display

Only street names which are included in the map data will be displayed.

WARNING

■ When using the head-up display

- Check that the position and brightness of the head-up display image does not interfere with safe driving. Incorrect adjustment of the image's position or brightness may obstruct the driver's view and lead to an accident, resulting in death or serious injury.
- Do not continuously look at the head-up display while driving as you may fail to see pedestrians, objects on the road, etc., ahead of the vehicle.

 NOTICE

■ Head-up display projector

- Do not place any drinks near the head-up display projector. If the projector gets wet, electrical malfunctions may result.

- Do not place anything on or put stickers onto the head-up display projector. Doing so could interrupt head-up display indications.
- Do not touch the inside of the head-up display projector or thrust sharp edges or the like into the projector. Doing so could cause mechanical malfunctions.

Using the head-up display
■ Enabling/disabling the head-up display

Press the "HUD" switch.

■ Changing settings of the head-up display

The following settings can be

changed on  on the multi-information display (→P.674).

● Enabling/disabling the head-up display

Select to enabling/disabling the head-up display.

● Head-up display type

Select to change head-up display type.

● Brightness and vertical position of the head-up display

Select to adjust the brightness or vertical position of the head-up display.

● Display angle

Select to adjust the angle of the head-up display.

■ Enabling/disabling of the head-up display

If the head-up display is disabled, it will remain disabled when the power switch is turned off then back to ON.

■ Display brightness

The brightness of the head-up display can be adjusted on  of the multi-information display. Also, it is automatically adjusted according to the ambient brightness.

■ Head-up display automatic position adjustment

If the display position is recorded into memory, the head-up display will be automatically adjusted to the desired position.

■ When the 12-volt battery is disconnected

The customize settings of the head-up display will be reset.

**NOTICE****When changing the settings of the head-up display**

To prevent 12-volt battery discharge, ensure that the Fuel cell system is operating while changing the settings of the head-up display.

Driving support system status

Displays the operational status of the following systems:

- Dynamic radar cruise control (→P.305)
- LTA (Lane Tracing Assist) (→P.281)
- LDA (Lane Departure Alert) (→P.289)
- LCA (Lane Change Assist) (→P.286)
- PDA (Proactive driving assist) (→P.294)
- FCTA (Front cross traffic alert) (→P.300)

Details of content displayed on the head-up display may differ from that displayed on the multi-information display. For details, refer to the explanation of each system.

Navigation system-linked display area

Displays the following items which are linked to the navigation system:

- Street name

- Route guidance to destination
- Compass (heading-up display)

Pop-up display

Pop-up displays for the following systems will be displayed when necessary:

Driving support systems

Displays a warning/suggestion/advice message or the operating state of a relevant system.

- PCS (Pre-Collision System) (→P.269)
- LTA (Lane Tracing Assist) (→P.281)
- LDA (Lane Departure Alert) (→P.289)
- Dynamic radar cruise control (→P.305)
- LCA (Lane Change Assist) (→P.286)
- PDA (Proactive driving assist) (→P.294)
- Emergency Driving Stop System (→P.321)
- FCTA (Front Cross Traffic Alert) (→P.300)
- Safe Exit Assist (→P.340)
- Parking Support Brake function (static objects front and rear of the vehicle/static objects around the vehicle [if equipped]) (→P.393)

- Brake Override System (→P.209)
- Drive-Start Control (→P.214)

Details of content displayed on the head-up display may differ from that displayed on the multi-information display. For details, refer to the explanation of each system.

■ Warning message

Some warning messages are displayed when necessary, according to certain conditions.

Details of content displayed on the head-up display may differ from that displayed on the multi-information display.

■ Audio system operation status

Displayed when an audio remote control switch on the steering wheel is operated.

■ Hands-free system status

Displayed when the hands-free system is operated.

■ When a pop-up display is displayed

When a pop-up display is displayed, a current display may no longer be displayed. In this case, the display will return after the pop-up display disappears.

Fuel cell System Indicator display area

A Charge area

B Eco area

C Power area

Displays Fuel cell system output or regeneration level. For details, refer to P.115.

■ Head-up display is displayed when

The power switch is in ON.

■ Fuel cell System Indicator is displayed when

- Fuel cell System Indicator is displayed when all of the following conditions are met:
 - Driving support system information (→P.126) is not displayed.
 - When other than Sport mode is selected.
 - Full mode (→P.129) is selected as head-up display type.

Energy monitor/consumption screen/air purification screen

The state of the fuel cell system can be viewed on the multi-information display and multimedia display.

System components

- A** Multi-information display
- B** Multimedia display
- C** Meter control switches

Energy monitor

The energy monitor can be used to check the vehicle drive status, fuel cell system operation status and energy regeneration status.

■ **Display procedure**

- ▶ Multi-information display
- Use the meter control switches, display the energy monitor on the multi-information display. For detail regarding the multi-information display, refer to

P.118

- ▶ Multimedia display
- 1 Select  on the main menu.
 - 2 Select "Energy flow".

■ **Display**

When energy is flowing, an arrow appears to show the direction of the flow of energy.

When energy is not flowing, an arrow is not displayed.

Blue: Shows that the electrical energy is charged or recovered.

Yellow: Shows that the electrical energy is used.

- ▶ Multi-information display

The figure shows all the arrows for the purpose of this explanation, but the actual contents of the display will differ.

- A** Fuel cell system
- B** Front tires
- C** Rear tires
- D** Traction battery

► Multimedia display

The figure shows all the arrows for the purpose of this explanation, but the actual contents of the display will differ.

- A** Fuel cell system
- B** Traction battery
- C** Electric motor (traction motor)
- D** Rear tires
- E** Front tires

■ Traction battery status

The display changes in 8 levels according to the remaining charge amount of the traction battery.

- The figure shows the multi-information display as an example for explanation.
- These images are examples only, and may vary slightly from actual conditions.
- The electrical charge and discharge arrow display for the fluctuations of the remaining battery charge display and Fuel cell System Indicator may not always match. However, this is not a malfunction.

- A** Low
- B** High

History fuel consumption screen (multimedia display only)

■ Display procedure

- 1 Select on the main menu.
- 2 Select "Trip information".

■ Current fuel consumption screen

If a screen other than current fuel consumption screen is displayed, touch "Current".

Use the displayed average fuel consumption as a reference.

The image is an example only, and may vary slightly from actual conditions.

- A** Resetting the consumption data
- B** Fuel consumption in the past 15 minutes
- C** Current fuel consumption
- D** Average vehicle speed since the Fuel cell system was started
- E** Trip range
- F** Elapsed time since the Fuel cell system was started

■ **History screen**

If a screen other than history screen is displayed, press “History”.

Use the displayed average fuel consumption as a reference.

Some screens may vary depending on the type of multimedia display.

The image is an example only, and may vary slightly from actual conditions.

- A** Latest fuel consumption
- B** Best recorded fuel consumption

- C** Previous fuel consumption record
- D** Resetting the history data
- E** Updating the latest fuel consumption data

■ **Updating the history data**

Update the latest fuel consumption by selecting “Update” to measure the current fuel consumption again.

■ **Resetting the data**

The fuel consumption data can be deleted by selecting “Clear”.

■ **Trip range**

Displays the estimated maximum distance that can be driven with the quantity of fuel remaining.

This distance is computed based on your average fuel consumption.

As a result, the actual distance that can be driven may differ from that displayed.

Air Purification screen (multimedia display)

Displays the air amount that was cleaned by fuel cell system this time, with regards to optimal power generated by fuel cell system due to the accelerator and fuel cell system operation status.

■ **Display procedure**

- 1 Select  on the main menu.
- 2 Select “Air Purification”.

■ Display

A Instant air cleaning amount

Displays the instant air cleaning amount per unit of time.

B Air cleaning amount estimation display

Displays the total amount of air cleaning from starting the fuel cell system.

C Air cleaning amount between resets

Displays the total air cleaning estimated amount after resets.

D Runner display

Runners increase depending on the estimated amount of air cleaning between resets.

E Resetting the data

Clear all the history up to now.

The image is an example only, and may vary slightly from actual conditions.

■ Data in Air purification is reseted when

“Clear” is selected to reset data in air cleaning amount between resets and runner display.

■ Display Runner

When ten runners are collected,

they are absorbed into a runner mark.

■ Display

- The actual amount of air may differ because the amount of air required for power generation changes due to usage environment (climate, altitude, etc.) and the status of power generation, as well as driving conditions.
- The instant air cleaning amount may operate slowly and may be delayed in operating, but this is not a malfunction.

Warning lights and indicators

The warning lights and indicators on the instrument cluster, center panel and outside rear view mirrors inform the driver of the status of the vehicle's various systems.

Instrument cluster

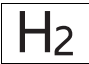

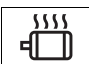

For the purpose of explanation, the following illustrations display all warning lights and indicators illuminated.

The units used on the meters and some indicators may differ depending on the target region.

Warning lights

Warning lights inform the driver of malfunctions in the indicated vehicle's systems.

	Hydrogen leak warning light ^{*1} (→P.610)		Electric power steering system warning light ^{*1} (→P.612)
	Brake system warning light ^{*1} (→P.610)		PCS warning light ^{*1} (→P.613)
	Brake system warning light ^{*1} (→P.610)		LTA indicator (→P.614)
	Brake system warning light ^{*1} (→P.610)		Intuitive parking assist OFF indicator ³ (if equipped) (→P.615)
	High coolant temperature warning light (→P.611)		PKSB OFF indicator ^{*1} (if equipped) (→P.616)
	Fuel cell system overheat warning light ^{*2} (→P.611)		RCTA OFF indicator ^{*1} (→P.616)
	Charging system warning light ^{*2} (→P.611)		RCD OFF indicator (if equipped) (→P.617)
	SRS warning light ^{*1} (→P.611)		Slip indicator light ^{*1} (→P.617)
	Pop Up Hood warning light ^{*1} (→P.611)		Inappropriate pedal operation warning light ^{*2} (→P.617)
	ABS warning light ^{*1} (→P.612)		Brake hold operated indicator ^{*1} (→P.618)
	ABS warning light ^{*1} (→P.612)		Parking brake indicator (→P.618)
	Electric power steering system warning light ^{*1} (→P.612)		Parking brake indicator (→P.618)
			Tire pressure warning light ^{*1} (→P.618)
			Low fuel level warning light (→P.618)

Driver's and front passenger's seat belt reminder light
(→P.619)

Rear passengers' seat belt reminder lights
(→P.619)

Advanced Drive warning light (if equipped)^{*1, 4}

^{*1}: These lights turn on when the power switch is turned to ON to indicate that a system check is being performed. They will turn off after the fuel cell system is on, or after a few seconds. There may be a malfunction in a system if the light does not come on, or turn off. Have the vehicle inspected by your Toyota dealer.

^{*2}: This light illuminates on the multi-information display with a message.

^{*3}: Intuitive parking assist OFF indicator turns on when the power switch is turned to ON while the Intuitive parking assist function is on. It will turn off after a few seconds.

^{*4}: Refer to "Toyota Teammate Advanced Drive OWNER'S MANUAL" at Toyota.com.

WARNING

■ If a safety system warning light does not come on

Should a safety system light such as the ABS and SRS warning light not come on when you start the fuel cell system, this could mean that these systems are not available to help protect you in an accident, which could result in death or serious injury. Have the vehicle inspected by your Toyota dealer immediately if this occurs.

NOTICE

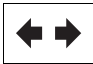

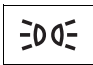

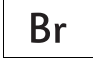

■ To prevent damage to the fuel cell system and its components

This vehicle is equipped with high coolant temperature warning light (→P.652), instead of, coolant temperature gauge.

The fuel cell system may be overheating if the high coolant temperature warning light flashes or comes on. In this case, immediately stop the vehicle in a safe place, and check the fuel cell system after it has cooled completely.

Indicators

The indicators inform the driver of the operating state of the vehicle's various systems.

	Turn signal indicator (→P.230)		Slip indicator light ^{*7} (→P.465)
	Headlight indicator (→P.238)	(Flashes)	
	Tail light indicator (→P.238)		VSC OFF indicator ^{*5, 7} (→P.466)
(U.S.A.)			PCS warning light ^{*3, 5, 7}
	Headlight high beam indicator (→P.240)		BSM outside rear view mirror indicators ^{*7, 8} (→P.335, 370)
	AHB indicator (→P.244)		BSM OFF indicator ^{*5, 7} (→P.335)
	Low coolant temperature indicator ^{*1} (Blue)		RCTA OFF indicator ^{*5, 7} (→P.370)
	Smart key system indicator ^{*2} (→P.219)		RCD OFF indicator ^{*5, 7} (if equipped) (→P.380)
	Cruise control indicator ^{*3}		Brake hold standby indicator ^{*7} (→P.234)
	Dynamic radar cruise control indicator ^{*3}		Brake hold operated indicator ^{*7} (→P.234)
	Cruise control "SET" indicator ^{*3}		Security indicator ^{*9} (→P.82, 83)
	LTA indicator ^{*3} (^{*4})		"READY" indicator (→P.219)
	Intuitive parking assist detection indicator ^{*4, 5} (if equipped) (→P.345)		Low outside temperature indicator ^{*10} (→P.141)
	Intuitive parking assist OFF indicator ^{*5, 6} (if equipped) (→P.346)		Parking brake indicator (→P.231)
	PKSB OFF indicator ^{*5, 7} (if equipped) (→P.388)		Parking brake indicator (→P.231)
		(U.S.A.)	
			Br mode indicator (→P.225)
			Eco drive mode indicator (→P.462)
			Sport mode indicator (→P.462)

Snow mode indicator
(→P.463)

“AIRBAG ON/OFF” indicator^{*7, 9} (→P.58)

Advanced Drive indicator^{*3} (if equipped)

^{*1}: Indicates the coolant temperature is cool.

^{*2}: This light illuminates on the multi-information display with a message.

^{*3}: Refer to “Toyota Teammate Advanced Drive OWNER’S MANUAL” at Toyota.com.

^{*4}: Depending on the operating conditions of the system, the color and state (illuminated/blinking) of the indicator change.

^{*5}: The light comes on when the system is turned off.

^{*6}: Intuitive parking assist OFF indicator turns on when the power switch is turned to ON while the Intuitive parking assist function is on. It will turn off after a few seconds.

^{*7}: These lights turn on when the power switch is turned to ON to indicate that a system check is being performed. They will turn off after the fuel cell system is on, or after a few seconds. There may be a malfunction in a system if the lights do not turn on, or turn off. Have the vehicle inspected by your Toyota dealer.

^{*8}: This light illuminates on the outside rear view mirrors.

^{*9}: This light illuminates on the cen-

ter panel.

^{*10}: When the outside temperature is approximately 37°F (3°C) or lower, the indicator will flash for approximately 10 seconds, then stay on.

Gauges and meters

The meters display various drive information.

Meter display

The units used on the meter and display may differ depending on the target region.

A Multi-information display

Presents the driver with a variety of driving-related data (→P.143)

Displays warning messages if a malfunction occurs (→P.622)

B Outside temperature (→P.141)

C Speedometer

Displays the vehicle speed

D Clock (→P.141)

Time displayed is linked to the multimedia system. For details, refer to "MULTIMEDIA OWNER'S MANUAL".

E Fuel gauge/Driving range (→P.142)

F Shift position indicator

Displays the selected shift position (→P.225)

G Fuel cell System Indicator

Displays the Fuel cell System Indicator (→P.141)

H Odometer and trip meter (→P.142)

■ **Displayed items when using Advanced Drive**

When using Advanced Drive, the displayed items and their location will differ. Refer to “Toyota Teammate Advanced Drive OWNER’S MANUAL” at Toyota.com for details.

■ **The meters and display illuminate when**

The power switch is in ON.

■ **When changing driving mode**

Background color of the multi-information display is changed following the selected driving mode. (→P.462, 463)

■ **Fuel cell System Indicator**

A Charge area

Shows regeneration* status.

Regenerated energy will be used to charge the traction battery.

B Eco area

Shows that the vehicle is being driven in an Eco-friendly manner. By keeping the indicator needle within Eco area, more Eco-friendly driving can be achieved.

C Power area

Shows that an Eco-friendly driving range is being exceeded (during full power driving, etc.)

*: When used in this manual, “regeneration” refers to the conversion of energy created by the movement

of the vehicle into electrical energy.

In the following situation, the Fuel cell System Indicator does not operate.

- “READY” indicator is not illuminated.
- The shift position is in a range other than D or Br mode.

■ **Clock settings screen**

If “Clock :00” is displayed when  is selected on the multi-information display, the system may be malfunctioning. Have the vehicle inspected by your Toyota dealer.

■ **Outside temperature display**

- In the following situations, the correct outside temperature may not be displayed, or the display may take longer than normal to change.
 - When stopped, or driving at low speeds (less than 12 mph [20 km/h])
 - When the outside temperature has changed suddenly (at the entrance/exit of a garage, tunnel, etc.)
- When “--” or “E” is displayed, the system may be malfunctioning. Take your vehicle to your Toyota dealer.
- Displays the outside temperature within the range of -40°F (-40°C) to 122°F (50°C).
- When the outside temperature is approximately 37°F (3°C) or lower, the indicator  will flash for approximately 10 seconds, then stay on.

■ **Liquid crystal display**

→P.144

■ **Customization**

Settings (e. g. meter display) can be changed on  screen of the multi-

information display. (→P.674)

Odometer and trip meter display

■ Display items

● Odometer

Displays the total distance the vehicle has been driven.

● Trip meter A/Trip meter B

Displays the distance the vehicle has been driven since the meter was last reset. Trip meters A and B can be used to record and display different distances independently.

■ Changing the display

Each time the “ODO/TRIP” switch is pressed, the displayed item will be changed. When the trip meter is displayed, pressing and holding the switch will reset the trip meter.

Instrument panel light control

The brightness of the instrument panel lights can be adjusted.

- 1 Brighter
- 2 Darker

■ Instrument cluster brightness adjustment

The instrument cluster brightness levels when the tail lights are on and off can be adjusted individually. However, when the surroundings are bright (daytime, etc.), turning on the tail lights will not change the instrument cluster brightness.

Fuel gauge and driving range

■ Fuel gauge

Displays the quantity of fuel remaining in the tank

■ Driving range

- Displays the possible driving distance computed from the fuel consumption studied from the driving history and the current remaining amount of fuel.
- When the air conditioning system is operating,  is displayed next to the driving range and this will be the driving range with the air condi-

tioning system on is displayed.

■ When the low fuel level warning light turns on

The low fuel level warning light turns on (→P.253) when the fuel gets low. In that case, refuel the vehicle.

■ Possible Driving Distance

- The actual possible driving distance may differ as fuel consumption changes, depending on driving environment (weather, traffic, etc.) and conditions (sudden acceleration, air conditioning, etc.).
- The driving range may shorten even when not driving due to power consumption by the system.
- The possible driving distance will be displayed as "--- miles (--- km)" in the following cases:
 - When the remaining fuel is being calculated (short time).
 - When the remaining fuel total reaches "E".
 - When a malfunction occurs where the possible driving distance cannot be calculated.

Multi-information display

The multi-information display is used to display fuel efficiency related information and various types of driving-related information. The multi-information display can also be used to change the display settings and other settings.

Display contents

Following information is displayed on the multi-information display.

By selecting menu icons (→P.144) on the multi-information display, a variety of driving-related information can be displayed. The multi-information display can also be used to change display settings and other vehicle settings. Warning or suggestion/advice pop-up displays are also displayed in certain situations.

■ The multi-information display is displayed when

The power switch is in ON.

■ Liquid crystal display

Small spots or light spots may appear on the display. This phenomenon is characteristic of liquid crystal displays, and there is no problem continuing to use the display.

Changing the display

The multi-information display is operated using the meter control switches.

- A** Scroll the screen*/switch the display*/move the cursor
- B** Press: Enter/Set
Press and hold: Reset/Display customizable items
- C** Return to the previous screen
- D** Call sending/receiving and history display

Linked with the hands-free system, sending or receiving call is displayed. For details regarding the hands-free system, refer to the "MULTIMEDIA OWNER'S MANUAL".

*: On screens where the screen can be scrolled and the display can

be switched, a scroll bar or a round icon that shows the number of registered screens is displayed.

⚠ WARNING

■ Caution for use while driving

For safety, avoid operating the meter control switch while driving as much as possible, and do not look continuously at the multi-information display while driving. Stop the vehicle and operate the meter control switch. Failure to do so may cause a steering wheel operation error, resulting in an unexpected accident.

Menu icons

Information related to each icon can be displayed by selecting the icon with the meter control switches.

Some of the information may be displayed automatically depending on the situation.

Icon	Display
	Driving information display (→P.145)
	Navigation system-linked display (→P.147)
	Audio system-linked display (→P.147)
	Vehicle information display (→P.147)
	Settings display (→P.147)
	Warning message display (→P.148)

Driving information display

Select to display fuel consumption data in various forms.

■ Fuel Economy

Following information is displayed.

A Current fuel economy

Displays the instantaneous current fuel Economy.

B Average fuel economy

To reset the average fuel economy display, press and hold the OK meter control switch.

The average fuel economy display can be changed in .

(→P.147)

● Average fuel economy (after start)

Displays the average fuel consumption since fuel cell system start.

● Average fuel economy (after refuel)

Displays the average fuel consumption since the vehicle was refueled.

■ ECO Accelerator Guidance/Eco Score

Displays a reference operation range for using the accelerator pedal according to driving conditions, and a score result that evaluates the current driving status.

A ECO Accelerator Guidance

B Eco Score

● ECO Accelerator Guidance

A ECO area

Shows that the vehicle is being driven in an Eco-friendly manner.

B Power area

Shows that an Eco-friendly driving range is being exceeded (during full power driving, etc.).

C Current acceleration

D Reference operation range

A zone is displayed in blue under the Eco area which can be used as a reference operation range for using the accelerator pedal according to driving conditions such as starting off and cruising.

The ECO Accelerator Guidance display changes according to the driving status, such as when starting off or cruising.

It is easier to drive in an Eco-friendly manner by driving according to the display showing the accelerator pedal operations and staying within the reference operation range.

● Eco Score

The following 3 Eco driving methods are evaluated in 5 levels: Smooth start-off acceleration, driving without sudden acceleration, and smooth stopping. When the vehicle is stopped, an Eco score out of 100 points will be displayed.

- A** Score result
- B** Eco start status
- C** Eco cruise status
- D** Eco stop status

How to read the bar display:

Score	Bar display
Unrated	
Low	
High	

After starting off, Eco Score display does not start until the vehicle speed exceeds approximately 19 mph (30km/h).

The Eco Score is reset each time the vehicle starts off to start a new evaluation.

■ ECO Accelerator Guidance/Eco Score will not operate when

The ECO Accelerator Guidance/Eco Score will not operate in the following situations:

- The Fuel cell System Indicator is not operating.
- The vehicle is being driven using the dynamic radar cruise control with full-speed range.

Driving support system information display

Select to display the operational status of the following systems:

- LTA (Lane Tracing Assist)*
- Dynamic radar cruise control*

*: Refer to "Toyota Teammate Advanced Drive OWNER'S MANUAL".

Navigation system-linked display

Select to display the following

navigation system-linked information.

- Route guidance
- Compass display (north-up display/heading-up display)

Audio system-linked display

The operating conditions of the audio system can be displayed on the multi-information display.

Vehicle information display

■ Drive information

2 items that are selected using the “Drive Info Items” setting (average speed, distance and total time) can be displayed vertically.

The displayed information changes according to the “Drive Info Type” setting (since the system was started or between resets). (→P.147)

Use the displayed information as a reference only.

Following items will be displayed.

- “Trip”
- “Average Speed”: Displays the average vehicle speed since fuel cell system start*
- “Distance”: Displays the distance driven since fuel cell system start*
- “Total Time”: Displays the elapsed time since fuel cell system start*

*: These items are reset each time the fuel cell system stops.

- “Total”
- “Average Speed”: Displays the average vehicle speed since the display was reset*
- “Distance”: Displays the distance driven since the display was reset*
- “Total Time”: Displays the elapsed time since the display was reset*

*: To reset, display the desired item and press and hold OK.

■ Energy monitor

→P.155

■ Tire inflation pressure

Displays inflation pressure of each tire.

Settings display

■ Meter display settings that can be changed

- Language

Select to change the language on the multi-information display.

- Units

Select to change the units of measure displayed.

-  (Driving information display settings)

Select to set up the following items.

- Fuel cell system

Select to enable/disable the ECO Accelerator Guidance (→P.145).

- Fuel Economy

Select to change the display on Fuel Economy (→P.145).

-  (Audio settings)

Select to enable/disable  screen.

-  (Vehicle information display settings)

- Display Contents

Select to set up the following items.

Energy monitor:

Select to enable/disable the Energy monitor (→P.155)

- Drive Info Type

Select to change the drive information type display between trip and total. (→P.147).

- Drive Info Items

Select to set the items on the upper and lower side of the drive information screen from three items, average speed, distance and total time.

- Trip Summary

Select to set the items displayed when the power switch is turned off.

- Pop-Up Display

Select to enable/disable pop-up displays for each relevant system.

- Multi-information display off

Select to turn the multi-information display off.

To turn the multi-information display on again, press any of the meter control switches.

- Default Settings

Select to reset the meter display settings.

■ Suspension of the settings display

- In the following situations, operation of the settings display will be temporarily suspended.
 - When a warning message appears on the multi-information display
 - When the vehicle begins to move
- Settings for functions not equipped to the vehicle are not displayed.
- When a function is turned off, the related settings for that function are not selectable.

NOTICE

■ During setting up the display

To prevent 12-volt battery discharge, ensure that the fuel cell system is operating while setting up the display features.

■ Warning message display

Select to display warning messages and measures to be taken if a malfunction is detected. (→P.622)

■ Suggestion function

Displays suggestions to the driver in the following situations. To select a response to a displayed suggestion, use the meter control switches.

■ Suggestion to turn on the headlights

If the headlight switch is in other than  or AUTO, and the vehicle speed is 3 mph (5 km/h) or

higher for a certain amount of time when the surroundings are dark, a suggestion message will be displayed.

■ **Suggestion to turn off the headlights**

If the headlights are left on for a certain amount of time after the power switch has been turned off, a suggestion message will be displayed.

If the driver's door is opened after the power switch is turned off, this suggestion message will not be displayed.

■ **Customization**

The suggestion function can be turned on/off. (Customizable features: →P.674)

Head-up display*

*: If equipped

The head-up display projects a variety of driving-related information and the operating state of the driving support systems on the windshield.

System components

Illustrations used in this text are intended as examples, and may differ from the image that is actually displayed by the head-up display.

A Navigation system-linked display area

Displays the following items which are linked to the navigation system:

- Route guidance to destination
- Street name
- Compass (heading-up display)

B Driving support system display area (→P.153)

C Speed limit/RSA (Road Sign Assist) display area

Displays the following items:

- Speed limit of the current road (linked to the navigation system) (U.S.A. only)
- RSA (Road Sign Assist) display

D Outside temperature display area

Displayed when the power switch is turned to ON or when the low outside temperature indicator is flashing.

E Driving information display area

Displays the following items:

- Speedometer
- Shift position (→P.225)
- Br mode (→P.229)

F Fuel cell System Indicator display area (→P.154)

■ Displayed items when using Advanced Drive

When using Advanced Drive, the displayed items and their location will differ. Refer to “Toyota Teammate Advanced Drive OWNER’S MANUAL” at Toyota.com for details.

■ Head-up display will operate when

The power switch is in ON.

■ When using the head-up display

The head-up display may seem dark or hard to see when viewed through sunglasses, especially polarized sunglasses. Adjust the brightness of the head-up display or remove your sunglasses.

■ Street name display

Only street names which are included in the map data will be displayed.

■ Outside temperature display

- When the ambient temperature is approximately 37°F (3°C) or lower, the low outside temperature indicator will flash for approximately 10 seconds and the outside temperature display will turn off. In this case, the display will be displayed again when the outside temperature becomes approximately 41°F (5°C) or higher.
- In the following situations, the correct outside temperature may not be displayed, or the display may take longer than normal to change:
 - When stopped, or driving at low speeds (less than 12 mph [20 km/h])

- When the outside temperature has changed suddenly (at the entrance/exit of a garage, tunnel, etc.)
- When “--” or “E” is displayed, the system may be malfunctioning. Take your vehicle to your Toyota dealer.

⚠ WARNING

■ When using the head-up display

- Check that the position and brightness of the head-up display image does not interfere with safe driving. Incorrect adjustment of the image’s position or brightness may obstruct the driver’s view and lead to an accident, resulting in death or serious injury.
- Do not continuously look at the head-up display while driving as you may fail to see pedestrians, objects on the road, etc., ahead of the vehicle.

 NOTICE

Head-up display projector

- Do not place any drinks near the head-up display projector. If the projector gets wet, electrical malfunctions may result.

- Do not place anything on or put stickers onto the head-up display projector. Doing so could interrupt head-up display indications.
- Do not touch the inside of the head-up display projector or thrust sharp edges or the like into the projector. Doing so could cause mechanical malfunctions.

Using the head-up display
Enabling/disabling the head-up display

Press the "HUD" switch.

Changing settings of the head-up display

The following settings can be

changed on  of the multi-information display. (→P.674)

- Brightness and vertical position of the head-up display

Select to adjust the brightness or vertical position of the head-up display.

- Fuel cell System Indicator

Select to enable/disable the Fuel cell System Indicator.

- Display content

Select to enable/disable the following items:

- Route guidance to destination/street name
- Driving support system display*
- Compass (heading-up display)
- Audio system operation status

*: Make sure to enable this display when using the driving support systems

- Display angle

Enabling/disabling of the head-up display

If the head-up display is disabled, it will remain disabled when the power switch is turned off then back to ON.

Display brightness

The brightness of the head-up display can be adjusted on  of the multi-information display. Also, it is automatically adjusted according to the ambient brightness.

Head-up display automatic position adjustment

If the display position is recorded into memory, the head-up display will be automatically adjusted to the

desired position. (→P.674)

■ **When the 12-volt battery is disconnected**

The customize settings of the head-up display will be reset.

 NOTICE
<p>■ When changing the settings of the head-up display</p> <p>To prevent 12-volt battery discharge, ensure that the fuel cell system is operating while the changing the settings of the head-up display.</p>

Driving support system display area

Displays the operational status of the following systems:

- LTA (Lane Tracing Assist)*
- Dynamic radar cruise control with full-speed range*

Details of content displayed on the head-up display may differ from that displayed on the multi-information display. For details, refer to the explanation of each system.

*: Refer to “Toyota Teammate Advanced Drive OWNER’S MANUAL”.

Pop-up display

Pop-up displays for the following systems will be displayed when necessary.

■ **Driving support systems**

Displays a warning/suggestion/advice message or the operating state of a relevant

system.

- PCS (Pre-Collision System)*
- FCTA (Front Cross Traffic Alert)*
- Parking Support Brake function (static objects front and rear of the vehicle/static objects around the vehicle [if equipped]) (→P.397)
- Brake Override System (→P.209)
- Drive-Start Control (→P.214)

Details of content displayed on the head-up display may differ from that displayed on the multi-information display. For details, refer to the explanation of each system.

*: Refer to “Toyota Teammate Advanced Drive OWNER’S MANUAL”.

■ ** /  icons**

These icons are linked to the multi-information display

 : Master warning icon

Displayed when a warning message is displayed on the multi-information display. (→P.622)

 : Information icon

Displayed when a suggestion pop-up display (→P.148) or advice pop-up display is displayed on the multi-information display.

■ **Warning message**

Some warning messages are displayed when necessary, according to certain conditions.

Details of content displayed on the head-up display may differ from that displayed on the multi-information display.

■ Audio system operation status

Displayed when an audio remote control switch on the steering wheel is operated.

■ Hands-free system status

Displayed when the hands-free system is operated.

■ When a pop-up display is displayed

When a pop-up display is displayed, a current display may no longer be displayed. In this case, the display will return after the pop-up display disappears.

Fuel cell System Indicator

A Charge area

B Eco area

C Power area

Displayed content is the same as that displayed on the meter (Fuel cell System Indicator). For details, refer to P.141.

Energy monitor/consumption screen/air purification screen

The state of the fuel cell system can be viewed on the multi-information display and multimedia display.

System components

A Multi-information display

B Multimedia display

C Meter control switches

Energy monitor

The energy monitor can be used to check the vehicle drive status, fuel cell system operation status and energy regeneration status.

■ Display procedure

▶ Multi-information display

Press < or > of the meter control switches on the steering wheel and select , press ^ or v of the meter control

switches and select the energy monitor.

► Multimedia display

- 1 Select  on the main menu.
- 2 Select "Energy flow".

■ Display

When energy is flowing, an arrow appears to show the direction of the flow of energy.

When energy is not flowing, an arrow is not displayed.

Green ^{*1}/Blue ^{*2}: Shows that the electrical energy is charged or recovered.

Yellow ^{*1}/Orange ^{*2}: Shows that the electrical energy is used.

Red: Shows that the power of the fuel cell system is used.

^{*1}: Multi-information display

^{*2}: Multimedia display

► Multi-information display

The figure shows all the arrows for the purpose of this explanation, but the actual contents of the display will differ.

A Fuel cell system

B Traction battery

C Front tires

D Rear tires

► Multimedia display

The figure shows all the arrows for the purpose of this explanation, but the actual contents of the display will differ.

A Fuel cell system

B Traction battery

C Electric motor (traction motor)

D Rear tires

E Front tires

■ Traction battery status

The display changes in 8 levels according to the remaining charge amount of the traction battery.

- The figure shows the multi-information display as an example for explanation.
- These images are examples only, and may vary slightly from actual conditions.
- The electrical charge and discharge arrow display for the fluctuations of the remaining battery charge display and Fuel cell System Indicator may not always match. However, this is not a malfunction.

A Low

B High

History fuel consumption screen (multimedia display only)

■ Display procedure

- 1 Select  on the main menu.
- 2 Select "Trip information".

■ Display

Use the displayed average fuel consumption as a reference. The image is an example only, and may vary slightly from actual conditions.

A Latest fuel consumption

B Best recorded fuel consumption

C Previous fuel consumption

record

D Resetting the history data

E Updating the latest fuel consumption data

■ Updating the history data

Update the latest fuel consumption by selecting "Update" to measure the current fuel consumption again.

■ Resetting the data

The fuel consumption data can be deleted by selecting "Clear".

■ Using the voice control system

Fuel consumption, trip range, etc. can be checked using the voice control system.

For details regarding the voice control system, refer to "MULTIMEDIA OWNER'S MANUAL".

Air Purification screen (multimedia display)

Displays the air amount that was cleaned by fuel cell system this time, with regards to optimal power generated by fuel cell system due to the accelerator and fuel cell system operation status.

■ Display procedure

- 1 Select  on the main menu.
- 2 Select "Air Purification".

■ **Display**

A Instant air cleaning amount

Displays the instant air cleaning amount per unit of time.

B Air cleaning amount estimation display

Displays the total amount of air cleaning from starting the fuel cell system.

C Air cleaning amount between resets

Displays the total air cleaning estimated amount after resets.

D Runner display

Runners increase depending on the estimated amount of air cleaning between resets.

E Resetting the data

Clear all the history up to now.

The image is an example only, and may vary slightly from actual conditions.

■ **Data in Air purification is reseted when**

“Clear” is selected to reset data in air cleaning amount between resets and runner display.

■ **Display Runner**

When ten runners are collected,

they are absorbed into a runner mark.

■ **Display**

● The actual amount of air may differ because the amount of air required for power generation changes due to usage environment (climate, altitude, etc.) and the status of power generation, as well as driving conditions.

● The instant air cleaning amount may operate slowly and may be delayed in operating, but this is not a malfunction.

Keys

The keys

The following keys are provided with the vehicle.

▶ Type A

A Electronic keys

- Operating the smart key system (→P.175)
- Operating the wireless remote control function (→P.162)

B Mechanical keys

C Key number plate

▶ Type B

A Electronic keys

- Operating the smart key system (→P.175)
- Operating the wireless remote control function (→P.162)

B Mechanical keys

C Key number plate

■ When riding in an aircraft

When bringing an electronic key onto an aircraft, make sure you do not press any buttons on the electronic key while inside the aircraft cabin. If you are carrying an electronic key in your bag, etc., ensure that the buttons are not likely to be pressed accidentally. Pressing a button may cause the electronic key to emit radio waves that could interfere with the operation of the aircraft.

■ Electronic key battery depletion

- The standard battery life is 1 to 2 years.
- If the battery becomes low, an alarm will sound in the cabin and a message will be shown on the multi-information display when the fuel cell system is stopped.
- To reduce key battery depletion when the electronic key is to not be used for long periods of time, set the electronic key to the battery-saving mode. (→P.177)
- As the electronic key always receives radio waves, the battery will become depleted even if the electronic key is not used. The following symptoms indicate that the electronic key battery may be depleted. Replace the battery when necessary.
- The smart key system or the wireless remote control does not operate.
- The detection area becomes smaller.
- The LED indicator on the key surface does not turn on.

You can replace the battery by yourself (→P.592). However, as there is a danger that the electronic key may be damaged, it is recommended

that replacement is carried out by your Toyota dealer.

- To avoid serious deterioration, do not leave the electronic key within 3 ft. (1 m) of the following electrical appliances that produce a magnetic field:
 - TVs
 - Personal computers
 - Cellular phones, cordless phones and battery chargers
 - Table lamps
 - Induction cookers
- If the electronic key is near the vehicle for longer than necessary, even if the smart key system is not operated, the key battery may become depleted faster than normal. When not operating the smart key system, it is recommended to not stay with the electronic key near the vehicle longer than necessary.

■ **Replacing the battery**

→P.592

■ **Confirmation of the number of registered keys**

The number of keys already registered to the vehicle can be confirmed. Ask your Toyota dealer for details.

■ **If a message regarding the state of the electronic key or power switch mode, etc. is shown**

To prevent trapping the electronic key inside the vehicle, leaving the vehicle carrying the electronic key on your person without turning the power switch to OFF or other passengers from unintentionally taking the key out of the vehicle, etc., a message that prompts the user to confirm the state of the electronic key or power switch mode may be shown on the multi-information display. In those cases, follow the instructions on the display immediately.

■ **If “Key Battery Low Replace Key Battery” is displayed on the multi-information display**

The electronic key has a low battery. Replace the electronic key battery. (→P.592)

■ **If “A New Key has been Registered Contact Your Dealer for Details” is shown on the multi-information display**

This message will be displayed each time the driver’s door is opened when the doors are unlocked from the outside for approximately 10 days after a new electronic key has been registered. If this message is displayed but you have not had a new electronic key registered, ask your Toyota dealer to check if an unknown electronic key (other than those in your possession) has been registered.

 NOTICE

■ **To prevent key damage**

- Do not drop the keys, subject them to strong shocks, or bend them.
- Do not expose the keys to high temperatures for a long period of time.
- Do not get the keys wet or wash them in an ultrasonic washer, etc.
- Do not attach metallic or magnetic materials to the keys or place the keys close to such materials.
- Do not disassemble the keys.
- Do not attach a sticker or anything else to the surface of the electronic key.
- Do not place the keys near objects that produce magnetic fields, such as TVs, audio systems and induction cookers.

 NOTICE

● Do not place the keys near medical electrical equipment such as low-frequency therapy equipment or microwave therapy equipment, and do not receive medical attention with the keys on your person.

■ Carrying the electronic key on your person

Carry the electronic key 3.9 in. (10 cm) or more away from electric appliances that are turned on. Radio waves emitted from electric appliances within 3.9 in. (10 cm) of the electronic key may interfere with the key, causing the key to not function properly.

■ In case of a smart key system malfunction or other key-related problems

→P.644

■ When an electronic key is lost

→P.643

Wireless remote control

The electronic keys are equipped with the following wireless remote control:

▶ Type A

A Locks the doors (→P.166)

B Unlocks the doors (→P.166)

C Opens the windows* (→P.166)

D Opens the trunk (→P.173)

E Sounds the alarm

*: This setting must be customized at your Toyota dealer.

▶ Type B

A Locks the doors (→P.166)

B Unlocks the doors (→P.166)

C Opens the windows* (→P.166)

D Opens the trunk (→P.173)

E Sounds the alarm

*: This setting must be customized at your Toyota dealer.

■ Theft deterrent panic mode

When  is pressed for longer than about one second, an alarm will sound intermittently and the vehicle lights will flash to deter any person from trying to break into or damage your vehicle.

To stop the alarm, press any button on the electronic key.

Using the mechanical key

To take out the mechanical key, slide the release lever **A** and take the key out.

The mechanical key can only be inserted in one direction, as the key only has grooves on one side. If the key cannot be inserted in a lock cylinder, turn it over and re-attempt to insert it.

After using the mechanical key, store it in the electronic key. Carry the mechanical key together with the electronic key. If the electronic key battery is depleted or the entry function does not operate properly, you will need the mechanical key. (→P.644)

► Type A

► Type B

■ **When required to leave the vehicle's key with a parking attendant**

Turn the trunk opener main switch off (→P.175) and lock the glove box (→P.493) as circumstances demand.

Remove the mechanical key for your own use and provide the attendant with the electronic key only.

■ **If you lose your mechanical keys**

→P.643

■ **If a wrong key is used**

The key cylinder rotates freely, isolated from the internal mechanism.

4
Before driving

Digital key*

*: If equipped

A smartphone can be used instead of the electronic key of the vehicle by installing the dedicated Digital Key App on a smartphone. Also, Digital Key can be shared with your family or friends using the Digital Key App.

Free/open source software information

This product contains Free/open source software (FOSS).

License information and/or the source code of this FOSS can be obtained at the following URL:

<https://www.denso.com/global/en/opensource/dkey/toyota/>

Digital key usage conditions

In order to use the Digital Key, you need to install the Toyota App, Register the Vehicle to the customer's Toyota App profile, and subscribe to Remote Services, and enroll in Digital Key.

Digital key precautions

- A Digital Key can be used when the smartphone and server can communicate. The Digital Key may become unusable if the smartphone is not connected to the Internet. Be sure to carry the electronic
- A Digital Key can be used when the smartphone and server can communicate. The Digital Key may become unusable if the smartphone is not connected to the Internet. Be sure to carry the electronic
- A part of the services may be stopped for a certain period of time due to server maintenance. However, registered Digital Keys can be used during the maintenance.
- A smartphone with the Digital Key App enabled will be able

key of the vehicle if traveling to a location with unreliable communications.

- If the smartphone battery is depleted, the smartphone cannot be used as Digital Key. If the battery level is low, be sure to charge the smartphone prior to going out.
- The Digital Key system is related to the smart key system. If the smart key system has been deactivated in the vehicle customization setting, the Digital Key will also be disabled.
- Depending on the radio wave environment, the Digital Key may not be able to be used. →P.177
- When transferring vehicle ownership, make sure to delete the Digital Keys.
- If the vehicle is not operated for 14 days or more, the Digital Key will not connect automatically. Therefore, it may take some time before the system operates after a door handle is touched.

to lock and unlock the doors, start the fuel cell system and perform any other operations as same as the electronic key of the vehicle. Be especially careful not to lose the smartphone or allow it to be stolen. If the smartphone is lost or stolen, contact your Toyota dealer immediately.

- When taking your vehicle to a Toyota dealer for an inspection or repairs, make sure to bring an electronic key.
- With the Digital Key alone, no vehicle lights will illuminate when approached to the vehicle.

Doors

Unlocking and locking the doors from the outside

Smart key system (entry function)

Carry the electronic key to enable this function.

1 Grip the driver's door handle to unlock the door. Holding the driver's door handle for approximately 2 seconds unlocks all the doors. Grip any passenger door handle or rear door handle (vehicles with lock sensor) to unlock all the doors.*

Make sure to touch the sensor on the back of the handle.

The doors cannot be unlocked for 3 seconds after the doors are locked.

*: The door unlock settings can be changed.

2 Touch the lock sensor (indentation on the surface of the door handle) to lock all the doors.

Check that the door is securely locked.

Wireless remote control

Type A

1 Locks all the doors

Check that the door is securely locked.

2 Unlocks all the doors

Pressing the button unlocks the driver's door. Pressing the button again within 5 seconds unlocks the other door.

Press and hold to open the windows.*

*: This setting must be customized at your Toyota dealer.

Type B

1 Locks all the doors

Check that the door is securely locked.

2 Unlocks all the doors

Pressing the button unlocks the driver's door. Pressing the button again within 5 seconds unlocks the

other door.
Press and hold to open the windows.*

*: This setting must be customized at your Toyota dealer.

Switching the door unlock function

It is possible to set which doors the entry function unlocks using the wireless remote control.

- 1 Turn the power switch off.
- 2 When the indicator light on the key surface is not on, press and hold ,  or  for approximately 5 seconds while pressing and holding .

The setting changes each time an operation is performed, as shown below. (When changing the setting continuously, release the buttons, wait for at least 5 seconds, and repeat step 2.)

Multi-information display/Beep	Unlocking function
 Exterior: Beeps 3 times Interior*: Pings once	Holding the driver's door handle unlocks only the driver's door. Holding any of the passenger door handles unlocks all the doors.
 Exterior: Beeps twice Interior*: Pings once	Holding a door handle unlocks all the doors.

*: Vehicles with Toyota Teammate Advanced Drive

To prevent unintended triggering of the alarm, unlock the doors using the wireless remote control and open and close a door once after the settings have been changed. (If a door is not opened within 60 seconds after  is pressed, the doors will be locked again and the alarm will automatically be set.)

In a case that the alarm is triggered, immediately stop the alarm. (→P.83)

Impact detection door lock release system

In the event that the vehicle is subject to a strong impact, all the doors are unlocked. Depending on the force of the impact or the type of accident, however, the system may not operate.

4 Before driving

■ **Operation signals**

A buzzer sounds and the emergency flashers flash to indicate that the doors have been locked/unlocked. (Locked: once; Unlocked: twice)

A buzzer sounds to indicate that the windows are operating.

■ **Security feature**

If a door is not opened within approximately 60 seconds after the vehicle is unlocked, the security feature automatically locks the vehicle again. (However, depending on the location of the electronic key, the key may be detected as being in the vehicle. In this case, vehicle may be unlocked.)

■ **When the doors cannot be locked by the lock sensor on the surface of the door handle**

When the doors cannot be locked even if the lock sensor on the surface of the door handle is touched by a finger, touch the lock sensor with the palm.

If you are wearing gloves, remove them.

■ **Open door warning buzzer**

If an attempt to lock the doors is made when a door is not fully closed, a buzzer sounds continuously for 5 seconds. Fully close the door to stop the buzzer, and lock the vehicle once more.

■ **Setting the alarm**

Locking the doors will set the alarm system. (→P.83)

■ **Conditions affecting the operation of the smart key system or wireless remote control**

→P.177

■ **If the smart key system or the wireless remote control does not operate properly**

Use the mechanical key to lock and unlock the doors. (→P.645)

Replace the key battery with a new one if it is depleted. (→P.592)

■ **If the 12-volt battery is discharged**

The doors cannot be locked and unlocked using the smart key system or wireless remote control. Lock or unlock the doors using the mechanical key. (→P.645)

■ **Rear seat reminder function**

- In order to remind you not to forget luggage, etc., in the rear seat, when the power switch is turned to OFF after any of the following conditions are met, a buzzer will sound and a message will be displayed on the multi-information display for approximately 6 seconds.
- The fuel cell system is started within 10 minutes after opening and closing a rear door.
- A rear door has been opened and closed after the fuel cell system was started.

However, if a rear door is opened and then closed within approximately 2 seconds, the rear seat reminder function may not operate.

- The rear seat reminder function determines that luggage, etc., has been placed in a rear seat based on opening and closing of a rear door. Therefore, depending on the situation, the rear seat reminder function may not operate and you may still forget luggage, etc., in the rear seat, or it may operate unnecessarily.
- The rear seat reminder function

can be enabled/disabled.
(→P.674)

■ **Customization**

Some functions can be customized.
(→P.674)

⚠ WARNING

■ **To prevent an accident**

Observe the following precautions while driving the vehicle. Failure to do so may result in a door opening and an occupant falling out of the vehicle, resulting in death or serious injury.

- Ensure that all doors are properly closed and locked.
- Do not pull the inside handle of the doors while driving.
Be especially careful for the front doors, as the doors may be opened even if the inside lock buttons are in locked position.
- Set the rear door child-protector locks when children are seated in the rear seats.

■ **When opening or closing a door**

Check the surroundings of the vehicle such as whether the vehicle is on an incline, whether there is enough space for a door to open and whether a strong wind is blowing. When opening or closing the door, hold the door handle tightly to prepare for any unpredictable movement.

Unlocking and locking the doors from the inside

■ **Door lock switches (to lock/unlock)**

- 1** Locks all the doors
- 2** Unlocks all the doors

■ **Inside lock buttons (to lock)**

Push down the inside lock button to lock the door.

■ **Inside door handles (to unlock)**

- ▶ For the front doors

Pull the handle to unlock and open the door.

When the door is unlocked, the inside lock button will pop up.

- ▶ For the rear doors

Pull the handle to unlock the door. Pull the handle a second

time to open the door.

When the door is unlocked, the inside lock button will pop up.

Locking the front doors from the outside without a key

- 1 Push down the inside lock button.
- 2 Close the door.

The door cannot be locked if the power switch is in ACC or ON, or the electronic key is left inside the vehicle. However, the key may not be detected correctly and the door may be locked.

Open door warning buzzer

If the vehicle speed reaches 3 mph (5 km/h), a buzzer sounds to indicate that the door(s), the hood or the trunk is not fully closed. The open door(s) or trunk is indicated on the multi-information display.

Rear door child-protector lock

The door cannot be opened from inside the vehicle when the lock is set.

1 Unlock

2 Lock

These locks can be set to prevent children from opening the rear doors. Push down on each rear door switch to lock both rear doors.

Automatic door locking and unlocking systems

The following functions can be set or canceled:

For instructions on customizing, refer to P.674.

Function	Operation
Speed linked door locking function	All doors are automatically locked when vehicle speed is approximately 12 mph (20 km/h) or higher.
Shift position linked door locking function	All doors are automatically locked when the shift position is shifted to a position other than P.

Function	Operation
Shift position linked door unlocking function	All doors are automatically unlocked when the shift position is shifted to P.
Driver's door linked door unlocking function	All doors are automatically unlocked when driver's door is opened within approximately 45 seconds after turning the power switch off.

Trunk

The trunk can be opened using the trunk opener switch, entry function or wireless remote control.

WARNING

Observe the following precautions. Failure to do so may result in death or serious injury.

■ Before driving

- Make sure that the trunk lid is fully closed. If the trunk lid is not fully closed, it may open unexpectedly while driving and hit near-by objects or luggage in the trunk may be thrown out, causing an accident.
- Do not allow children to play in the trunk. If a child is accidentally locked in the trunk, they could suffer from heat exhaustion, suffocation or other injuries.
- Do not allow a child to open or close the trunk lid. Doing so may cause the trunk lid to open unexpectedly, or cause the child's hands, head, or neck to be caught by the closing trunk lid.

■ Important points while driving

Never let anyone sit in the trunk. In the event of sudden braking or a collision, they are susceptible to death or serious injury.

■ Using the trunk

Observe the following precautions. Failure to do so may cause parts of the body to be caught, resulting in serious injury.

⚠ WARNING

- Remove any heavy loads, such as snow and ice, from the trunk lid before opening it. Failure to do so may cause the trunk lid to suddenly shut again after it is opened.
- When opening or closing the trunk lid, thoroughly check to make sure the surrounding area is safe.
- If anyone is in the vicinity, make sure they are safe and let them know that the trunk is about to open or close.
- Use caution when opening or closing the trunk lid in windy weather as it may move abruptly in strong wind.
- The trunk lid may suddenly shut if it is not opened fully. It is more difficult to open or close the trunk lid on an incline than on a level surface, so beware of the trunk lid unexpectedly opening or closing by itself. Make sure that the trunk lid is fully open and secure before using the trunk.

- When closing the trunk lid, take extra care to prevent your fingers, etc., from being caught.

- When closing the trunk lid, make sure to press it lightly on its outer surface. If the trunk handle is used to fully close the trunk lid, it may result in hands or arms being caught.
- Do not attach any accessories other than genuine Toyota parts to the trunk lid. Such additional weight on the trunk lid may cause the lid to suddenly shut again after it is opened.

■ Trunk easy closer (if equipped)

In the event that the trunk lid is left slightly open, the trunk easy closer will automatically close it to the fully closed position. It takes several seconds before the trunk easy closer begins to operate. Be careful not to get fingers caught or anything else in the trunk lid, as this may cause bone fractures or other serious injuries.

NOTICE**■ To prevent trunk easy closer malfunctions (if equipped)**

Do not apply force to the trunk lid while the trunk easy closer is operating.

Opening/closing the trunk**■ Trunk opener switch**

Press the trunk opener switch.

**■ Smart key system**

While carrying the electronic key, press the button on the trunk lid.

When all the doors are unlocked using one of the following methods, the trunk can be opened without the electronic key:

- Entry function
- Wireless remote control
- Door lock switches
- Automatic door unlocking system
- Mechanical key

**■ Wireless remote control**

Press and hold the switch.

A buzzer will sound.

► Type A**► Type B****■ Trunk grip**

Using the trunk grip, pull down the trunk lid without applying sideways force and push the trunk lid down from the outside to close it.

■ **Trunk light**

- The trunk light turns on when the trunk is opened.
- If the trunk light is left on when the power switch is turned off, the light will go off automatically after 20 minutes.

■ **Trunk easy closer (if equipped)**

In the event that the trunk lid is left slightly open, the trunk easy closer will automatically close it to the fully closed position.

- The trunk easy closer will operate regardless of the power switch mode.
- If the trunk easy closer does not operate, open the trunk to the half open position or more and then close it.

■ **Function to prevent the trunk being locked with the electronic key inside**

- When all doors are locked, closing the trunk lid with the electronic key left inside the trunk will sound an alarm. In this case, the trunk lid can be opened pressing the trunk release button on the trunk lid.
- If the spare electronic key is put in the trunk with all the doors locked, the key confinement prevention function is activated so the trunk can be opened. In order to prevent theft, take all electronic keys with you when leaving the vehicle.
- If the electronic key is put in the

trunk with all the doors locked, the key may not be detected depending on the location of the key and the surrounding radio wave conditions. In this case, the key confinement prevention function cannot be activated, causing the doors to lock when the trunk is closed. Make sure to check where the key is before closing the trunk.

- The key confinement prevention function cannot be activated if any one of the doors is unlocked. In this case, open the trunk using the trunk opener.

■ **Internal trunk release lever**

The trunk lid can be opened by pulling the glow-in-the-dark lever located on the inside of the trunk lid to the side.

The lever will continue to glow for some time after the trunk lid is closed.

■ **Using the mechanical key**

The trunk can be also opened using the mechanical key. (→P.645)

■ **If the smart key system or the wireless remote control does not operate properly**

Use the mechanical key to unlock the trunk. (→P.645)
Replace the key battery with a new one if it is depleted.

■ **Open door warning buzzer**

→P.170

■ **Customization**

Some functions can be customized. (→P.674)

Luggage security system

The trunk opener switch can be temporarily disabled to protect luggage stored in the trunk against theft.

Turn the main switch in the glove box off to disable the trunk opener.

A On

B Off

The trunk lid cannot be opened even with the wireless remote control or entry function.

■ **When leaving a key to the vehicle with a parking attendant**
→P.163

Smart key system

The following operations can be performed simply by carrying the electronic key on your person, for example in your pocket. The driver should always carry the electronic key.

- Locks and unlocks the doors (→P.166)
- Opens the trunk (→P.173)
- Starts the fuel cell system (→P.219)

■ Antenna location

- A** Antennas outside the cabin (front)
- B** Antennas outside the cabin (rear) (if equipped)
- C** Antennas inside the cabin
- D** Antenna inside the trunk
- E** Antenna outside the trunk

- F** Antennas outside the cabin
(vehicles with Advanced Park remote control function)

■ **Effective range (areas within which the electronic key is detected)**

- A** When locking or unlocking the doors

The system can be operated when the electronic key is within about 2.3 ft. (0.7 m) of either of the front door handles and rear door handles (if equipped). (Only the doors detecting the key can be operated.)

- B** When opening the trunk

The system can be operated when the electronic key is within about 2.3 ft. (0.7 m) of the trunk release button.

- C** When starting the fuel cell system or changing power switch modes

The system can be operated when the electronic key is inside the vehicle.

■ **If an alarm sounds or a warning message is displayed**

An alarm sounds and warning messages are displayed on the multi-information display to protect against unexpected accidents or theft of the vehicle resulting from erroneous operation. When a warn-

ing message is displayed, take appropriate measures based on the displayed message. (→P.622)

When only an alarm sounds, circumstances and correction procedures are as follows.

- When an exterior alarm sounds once for 5 seconds

Situation	Correction procedure
An attempt was made to lock the vehicle while a door was open.	Close all of the doors and lock the doors again.
The trunk was closed while the electronic key was still inside the trunk and all the doors were locked.	Retrieve the electronic key from the trunk and close the trunk lid.

- When an interior alarm sounds continuously

Situation	Correction procedure
The power switch was turned to ACC while the driver's door was open (or the driver's door was opened while the power switch was in ACC).	Turn the power switch off and close the driver's door.
The power switch was turned off while the driver's door was open.	Close the driver's door.

■ **If "Key Detected in Vehicle" is shown on the multi-information display**

An attempt was made to lock the doors using the smart key system while the electronic key was still

inside the vehicle. Retrieve the electronic key from the vehicle and lock the doors again.

Battery-saving function

The battery-saving function will be activated in order to prevent the electronic key battery and the 12-volt battery from being discharged while the vehicle is not in operation for a long time.

- In the following situations, the smart key system may take some time to unlock the doors. Also the illuminated entry system may not operate properly (Vehicles without Toyota Teammate Advanced Drive).
- Vehicles without Toyota Teammate Advanced Drive: The electronic key has been left in an area of approximately 11.5 ft. (3.5 m) of the outside of the vehicle for 40 seconds or longer.
- Vehicles with Toyota Teammate Advanced Drive: The electronic key has been left in an area of approximately 6 ft. (2 m) of the outside of the vehicle for 10 minutes or longer.
- The smart key system has not been used for 5 days or longer.
- If the smart key system has not been used for 14 days or longer, the doors cannot be unlocked at any doors except the driver's door. In this case, take hold of the driver's door handle, or use the wireless remote control or the mechanical key, to unlock the doors.

Turning an electronic key to battery-saving mode

- When battery-saving mode is set, battery depletion is minimized by stopping the electronic key from receiving radio waves.

Press  twice while pressing and holding . Confirm that the electronic key indicator flashes 4 times.

While the battery-saving mode is set, the smart key system cannot be used. To cancel the function, press any of the electronic key buttons.

▶ Type A

▶ Type B

- Electronic keys that will not be used for long periods of time can be set to the battery-saving mode in advance.

When electronic key function stops

If the position of the electronic key has not changed for a certain amount of time such as when the electronic key is left somewhere, the function of the electronic key stops to reduce depletion of the battery.

In this case, function can automatically be restored by moving the position of the key such as by lifting it up.

Conditions affecting operation

The smart key system uses weak radio waves. In the following situations, the communication between the electronic key and the vehicle may be affected, preventing the smart key system, wireless remote control and immobilizer system from operating properly.

4 Before driving

- When the electronic key battery is depleted
- Near a TV tower, electric power plant, gas station, radio station, large display, airport or other facility that generates strong radio waves or electrical noise
- When the electronic key is in contact with, or is covered by the following metallic objects
 - Cards to which aluminum foil is attached
 - Cigarette boxes that have aluminum foil inside
 - Metallic wallets or bags
 - Coins
 - Hand warmers made of metal
 - Media such as CDs and DVDs
- When other wireless keys (that emit radio waves) are being used nearby
- When carrying the electronic key together with the following devices that emit radio waves
 - Portable radio, cellular phone, cordless phone or other wireless communication devices
 - Another electronic key or a wireless key that emits radio waves
 - Personal computers or personal digital assistants (PDAs)
 - Digital audio players
 - Portable game systems
- If window tint with a metallic content or metallic objects are attached to the rear window
- When the electronic key is placed near a battery charger or electronic devices
- When the vehicle is parked in a pay parking spot where radio waves are emitted.

If the doors cannot be locked/unlocked using the smart key system, lock/unlock the doors by performing any of the following:

- Bring the electronic key close to either front door handle and operate the entry function.

- Operate the wireless remote control.

If the doors cannot be locked/unlocked using the above methods, use the mechanical key. (→P.645)

If the fuel cell system cannot be started using the smart key system, refer to P.646.

■ Note for the entry function

- Even when the electronic key is within the effective range (detection areas), the system may not operate properly in the following cases:
 - The electronic key is too close to the window or outside door handle, near the ground, or in a high place when the doors are locked or unlocked.
 - The electronic key is near the ground or in a high place, or too close to the center of the rear bumper when the trunk is opened.
 - The electronic key is on the instrument panel, rear package tray or floor, or in the door pockets or glove box when the fuel cell system is started or power switch modes are changed.
- Do not leave the electronic key on top of the instrument panel or near the door pockets when exiting the vehicle. Depending on the radio wave reception conditions, it may be detected by the antenna outside the cabin and the doors will become lockable from the outside, possibly trapping the electronic key inside the vehicle.
- As long as the electronic key is within the effective range, the doors may be locked or unlocked by anyone. However, only the doors detecting the electronic key can be used to unlock the vehicle.
- Even if the electronic key is not inside the vehicle, it may be possible to start the fuel cell system if the electronic key is near the win-

- dow.
- The doors may unlock or lock if a large amount of water splashes on the door handle, such as in the rain or in a car wash, when the electronic key is within the effective range. (The doors will automatically be locked after approximately 60 seconds if the doors are not opened and closed.)
 - If the wireless remote control is used to lock the doors when the electronic key is near the vehicle, there is a possibility that the door may not be unlocked by the entry function. (Use the wireless remote control to unlock the doors.)
 - Touching the door lock sensor while wearing gloves may delay or prevent lock operation. Remove the gloves and touch the lock sensor again.
 - When the lock operation is performed using the lock sensor, recognition signals will be shown up to two consecutive times. After this, no recognition signals will be given.
 - If the door handle becomes wet while the electronic key is within the effective range, the door may lock and unlock repeatedly. In this case, follow the following correction procedures to wash the vehicle:
 - Place the electronic key in a location 6 ft. (2 m) or more away from the vehicle. (Take care to ensure that the key is not stolen.)
 - Set the electronic key to battery-saving mode to disable the smart entry & start system. (→P.177)
 - If the electronic key is inside the vehicle and a door handle becomes wet during a car wash, a message may be shown on the multi-information display and a buzzer will sound outside the vehicle. To turn off the alarm, lock all the doors.
 - The lock sensor may not work properly if it comes into contact with ice, snow, mud, etc. Clean the lock sensor and attempt to operate it again.
 - A sudden approach to the effective range or door handle may prevent the doors from being unlocked. In this case, return the door handle to the original position and check that the doors unlock before pulling the door handle again.
 - If there is another electronic key in the detection area, it may take slightly longer to unlock the doors after the door handle is gripped.
- **When the vehicle is not driven for extended periods**
- To prevent theft of the vehicle, do not leave the electronic key within 6 ft. (2 m) of the vehicle.
 - The smart key system can be deactivated in advance.
 - Battery-saving mode can reduce the power consumption of electronic keys. (→P.177)
- **To operate the system properly**
- Make sure to carry the electronic key when operating the system. Do not get the electronic key too close to the vehicle when operating the system from the outside of the vehicle.
- Depending on the position and holding condition of the electronic key, the key may not be detected correctly and the system may not operate properly. (The alarm may go off accidentally, or the door lock prevention function may not operate.)
- Do not leave the electronic key inside the trunk. The key confinement prevention function may not operate, depending on the location of the key (the inside edge of the trunk), conditions (inside a metal bag, close to metallic objects) and the radio

waves in the surrounding area.
(→P.174)

■ **If the smart key system does not operate properly**

- Locking and unlocking the doors and trunk: →P.645
- Starting the fuel cell system: →P.646

■ **Customization**

Some functions can be customized.
(→P.679)

If the smart key system has been deactivated in a customized setting, refer to the explanations for the following operations.

- Locking and unlocking the doors and opening the trunk:
Use the wireless remote control or mechanical key. (→P.166, 173, 645)
- Starting the fuel cell system and changing power switch modes: →P.646
- Stopping the fuel cell system: →P.221

■ **Certification**

→P.738

- User of any electrical medical device other than implantable cardiac pacemakers, cardiac resynchronization therapy-pacemakers or implantable cardioverter defibrillators should consult the manufacturer of the device for information about its operation under the influence of radio waves.
Radio waves could have unexpected effects on the operation of such medical devices.

Ask your Toyota dealer for details for disabling the entry function.

 **WARNING**

■ **Caution regarding interference with electronic devices**

- People with implantable cardiac pacemakers, cardiac resynchronization therapy-pacemakers or implantable cardioverter defibrillators should keep away from the smart key system antennas. (→P.175)
The radio waves may affect the operation of such devices. If necessary, the entry function can be disabled. Ask your Toyota dealer for details, such as the frequency of radio waves and timing of the emitted radio waves. Then, consult your doctor to see if you should disable the entry function.

Front seats

Adjustment procedure

■ **Seat adjustment switches**

- A** Seat position adjustment
- B** Seatback angle adjustment
- C** Seat cushion (front) angle adjustment (if equipped)
- D** Vertical height adjustment (if equipped)
- E** Lumbar support adjustment (for driver's side)

■ **When adjusting the seat**

- Make sure that any surrounding passengers or objects are not contact the seat.
- Take care when adjusting the seat so that the head restraint does not touch the ceiling.

■ **Power easy access system (if equipped)**

The driver's seat and steering wheel move in accordance with power switch mode and the driver's seat belt condition. (→P.199)

! WARNING

■ **When adjusting the seat position**

- Take care when adjusting the seat position to ensure that other passengers are not injured by the moving seat.
- Do not put your hands under the seat or near the moving parts to avoid injury. Fingers or hands may become jammed in the seat mechanism.
- Make sure to leave enough space around the feet so they do not get stuck.

■ **Seat adjustment**

To reduce the risk of sliding under the lap belt during a collision, do not recline the seat more than necessary.

If the seat is too reclined, the lap belt may slide past the hips and apply restraint forces directly to the abdomen, or your neck may contact the shoulder belt, increasing the risk of death or serious injury in the event of an accident. Adjustments should not be made while driving as the seat may unexpectedly move and cause the driver to lose control of the vehicle.

Head restraints

Head restraints are provided for all seats.

WARNING

■ Head restraint precautions

Observe the following precautions regarding the head restraints. Failure to do so may result in death or serious injury.

- Use the head restraints designed for each respective seat.
- Adjust the head restraints to the correct position at all times.
- After adjusting the head restraints, push down on them and make sure they are locked in position.
- Do not drive with the head restraints removed.

Adjusting a head restraint

1 Up

Pull the head restraints up.

2 Down

Push the head restraint down while pressing the lock release button **A**.

■ Adjusting the height of the head restraints

Make sure that the head restraints are adjusted so that the center of the head restraint is closest to the top of your ears.

■ Adjusting the rear center seat head restraint

Always raise the head restraint one level from the stowed position when using.

Removing the head restraints

■ Front seat

Pull the head restraint up while pressing the lock release button

A.

If the head restraint touches the ceiling, making the removal difficult, change the seat height or angle. (→P.181)

■ **Rear seat**

Head restraints cannot be removed.

■ **Removing the rear center seat head restraints**

For removal and installation of the head restraint, contact your Toyota dealer.

Installing the head restraints

Align the head restraint with the installation holes and push it down to the lock position.

Press and hold the lock release button **A** when lowering the head restraint.

4
Before driving

Steering wheel

Adjustment procedure

Operating the switch moves the steering wheel in the following directions:

- 1 Up
- 2 Down
- 3 Toward the driver
- 4 Away from the driver

■ The steering wheel can be adjusted when

The power switch is in ACC or ON*.

*: If the driver's seat belt is fastened, the steering wheel can be adjusted regardless of power switch mode.

■ Automatic tilt-away & returning function (if equipped)

When the power switch is turned off, the steering wheel is automatically adjusted to a position that allows driver to enter and exit the vehicle easily.

When the power switch has been turned ACC or ON, the steering wheel automatically returns to the original position.

■ Automatic adjustment of the steering position (if equipped)

A desired steering position can be entered to memory and recalled automatically by the driving position memory system. (→P.199)

■ Power easy access system (if equipped)

The steering wheel and driver's seat move in accordance with power switch mode and the driver's seat belt condition. (→P.199)

■ Customization

Some functions can be customized. (→P.674)

⚠ WARNING

■ Caution while driving

Do not adjust the steering wheel while driving. Doing so may cause the driver to mishandle the vehicle and cause an accident, resulting in death or serious injury.

Sounding the horn

Press on or close to the  mark.

Inside rear view mirror*

*: If equipped

The rear view mirror's position can be adjusted to enable sufficient confirmation of the rear view.

Adjusting the height of rear view mirror

The height of the rear view mirror can be adjusted to suit your driving posture.

Adjust the height of the rear view mirror by moving it up and down.

⚠ WARNING

■ Caution while driving

Do not adjust the position of the mirror while driving. Doing so may lead to mishandling of the vehicle and cause an accident, resulting in death or serious injury.

Anti-glare function

Responding to the level of brightness of the headlights of

4
Before driving

vehicles behind, the reflected light is automatically reduced.

■ **To prevent sensor error**

To ensure that the sensors operate properly, do not touch or cover them.

Digital Rear-view Mirror*

*: If equipped

The Digital Rear-view Mirror is a system that uses the camera on the rear of the vehicle and displays its image on the display of the Digital Rear-view Mirror.

The Digital Rear-view Mirror can be changed between optical mirror mode and digital mirror mode by operating the lever.

The Digital Rear-view Mirror allows the driver to see the rear view despite obstructions, such as the head restraints, luggage or rear sunshade (if equipped) ensuring rear visibility. Also, the rear seats are not displayed and privacy of the passengers is enhanced.

⚠ WARNING

Observe the following precautions.
Failure to do so may result in death or serious injury.

■ **Before using the Digital Rear-view Mirror**

- Make sure to adjust the mirror before driving. (→P.188)
- Change to optical mirror mode and adjust the position of the Digital Rear-view Mirror so that the area behind your vehicle can be viewed properly.

⚠ WARNING

- Change to digital mirror mode and adjust the display settings.
- As the range of the image displayed by the Digital Rear-view Mirror is different from that of the optical mirror, make sure to check this difference before driving.

System components

- A** Camera indicator
Indicates that the camera is operating normally.
- B** Icon display area
Displays icons, adjusting gauge, etc. (→P.189)
- C** Select/adjust button
Press to change the setting of the item you want to adjust.
- D** Menu button
Press to display the icon display area and select the item you want to adjust.
- E** Lever
Operate to change between digital mirror mode and optical mirror mode.
- F** Digital anti-glare mode indi-

cator

In digital mirror mode, this indicates that the anti-glare function is on. (→P.189)

Changing modes

Operate the lever to change between digital mirror mode and optical mirror mode.

- 1** Digital mirror mode
Displays an image of the area behind the vehicle.
 will illuminate in this mode.
- 2** Optical mirror mode
Turns off the display of the Digital Rear-view Mirror allows it to be used as an optical mirror.

■ Digital mirror mode operating condition

The power switch is turned to ON. When the power switch is changed from ON to OFF or ACC, the image will disappear after several seconds.

■ When using the Digital Rear-view Mirror in digital mirror mode

- If it is difficult to see the Digital Rear-view Mirror image because water, snow, mud, etc. is stuck to the camera lens, operate the rear window washer (→P.247). or change to optical mirror mode.

4
Before driving

- When the trunk is open, the Digital Rear-view Mirror image may not display properly. Before driving, make sure the trunk is closed.
- If the display is difficult to see due to reflected light, close the electronic sunshade for the panoramic moon roof (if equipped).
- Any of the following conditions may occur when driving in the dark, such as at night. None of them indicates that a malfunction has occurred.
 - Colors of objects in the displayed image may differ from their actual color.
 - Depending on the height of the lights of the vehicle behind, the area around the vehicle may appear white and blurry.
 - Automatic image adjustment for brighter surrounding image may cause flickering.

If it is difficult to see the displayed image or flickering bothers you, change to optical mirror mode.

- The Digital Rear-view Mirror may become hot while it is in digital mirror mode. This is not a malfunction.
- Depending on your physical condition or age, it may take longer than usual to focus on the displayed image. In this case, change to optical mirror mode.
- Do not let passengers stare at the displayed image when the vehicle is being driven, as doing so may cause motion sickness.

■ **When the system malfunctions**

If the symbol shown in the illustration is displayed when using the Digital Rear-view Mirror in digital mirror mode, the system may be malfunctioning. The symbol will disappear in a few seconds. Operate the lever, change to optical mirror mode and have the vehicle inspected by your Toyota dealer.

■ **Adjusting the mirror**

■ **Adjusting the mirror height**

The height of the rear view mirror can be adjusted to suit your driving posture.

Change to optical mirror mode, adjusting the height of the rear view mirror by moving it up and down.

- ▶ Vehicles without Toyota Teammate Advanced Drive

- ▶ Vehicles with Toyota Teammate Advanced Drive

■ **Display settings (digital mirror mode)**

Settings of the display in the digital mirror mode, on/off operation of the automatic anti-glare function, etc. can be changed.

- 1 Press the menu button.
The icons will be displayed.

- 2 Press the menu button repeatedly and select the item you want to adjust.
- 3 Press or to change the setting.

The icons will disappear if a button is not operated for approximately 5 seconds or more.

Icons	Settings
	Select to adjust the brightness of the display.
	Select to adjust the area displayed up/down.
	Select to adjust the area displayed to the left/right.
	Select to adjust the angle of the displayed image.

Icons	Settings
	Select to zoom in/out the displayed image.
	The digital anti-glare mode can be turned on and off. When enabled, the brightness of the display is reduced at night to reduce headlight glare from vehicles to the rear.

■ **Adjusting the display (digital mirror mode)**

- The icons will disappear if a button is not operated for approximately 5 seconds or more.
- If the displayed image is adjusted, it may appear distorted. This is not a malfunction.
- If the brightness of the Digital Rear-view Mirror is set too high, it may cause eye strain. Adjust the Digital Rear-view Mirror to an appropriate brightness. If your eyes become tired, change to optical mirror mode.
- The brightness of the Digital Rear-view Mirror will change automatically according to the brightness of the area in front of your vehicle.
- The digital anti-glare mode operates only in locations where the surroundings are dark. Depending on the surrounding illumination environment, the image may not darken and it may not be possible to reduce headlight glare from vehicles to the rear.

■ **To prevent the light sensors from malfunctioning**

To prevent the light sensors from malfunctioning, do not touch or cover them.

4
Before driving

⚠ WARNING

Observe the following precautions. Failure to do so may result in death or serious injury.

■ **While driving**

● Do not adjust the position of the Digital Rear-view Mirror or adjust the display settings while driving. Stop the vehicle and operate the Digital Rear-view Mirror control switches. Failure to do so may cause a steering wheel operation error, resulting in an unexpected accident.

● Always pay attention to the vehicle's surroundings.

The size of the vehicles and other objects may look different when in digital mirror mode and optical mirror mode.

When backing up, make sure to directly check the safety of the area around your vehicle, especially behind the vehicle.

Additionally, if a vehicle approaches from the rear in the dark, such as at night, the surrounding area may appear dim.

Cleaning the Digital Rear-view Mirror

■ **Cleaning the mirror surface**

If the mirror surface is dirty, the

image on the display may be difficult to see.

Clean the mirror surface gently using a soft dry cloth.

■ **Cleaning the camera**

If it is difficult to see the Digital Rear-view Mirror image because water, snow, mud, etc. is stuck to the camera lens, operate the rear window washer or change to optical mirror mode. (→P.247)

■ **The camera**

The camera for the Digital Rear-view Mirror is located as shown.

■ **Cleaning the camera with washer fluid**

● When cleaning the camera, it may be difficult to see the image due to the washer fluid. Therefore, take care in the surrounding area while driving.

● If washer fluid remains on the camera lens surface after cleaning, the image may be difficult to see at night due to the height or inclination of the headlights of the vehicle behind. In this case, change to optical mirror mode.

● Some dirt may not be removed completely after cleaning. In this case, rinse the camera lens with a large quantity of water and then wipe it clean with a soft cloth dampened with water.

● Washer fluid is sprayed onto the

camera lens surface. Therefore, the ice, snow, etc. adhering around the camera cannot be removed.

 **NOTICE**

■ **To prevent the camera from malfunctioning**

- Observe the following precautions, otherwise the Digital Rear-view Mirror may not operate properly.
- Do not strike or hit the camera or subject it to a strong impact, as the camera installation position and angle may be changed.
- Do not remove, disassemble or modify the camera.
- When washing the camera, rinse it with a large quantity of water and then wipe it clean with a soft cloth dampened with water.
Do not strongly rub the camera lens, as it may be scratched and will not be able to transmit a clear image.

- Do not allow organic solvent, car wax, window cleaner or glass coat to adhere to the camera cover. If this happens, wipe it off as soon as possible.
- Do not apply hot water to the camera in cold weather, as the sudden change of temperature may cause the camera to not operate properly.
- When using a high pressure washer to wash the vehicle, do not directly spray the camera and its surrounding area, as doing so may cause the camera to not operate properly.
- Do not subject the camera to a strong impact as this could cause a malfunction. If this happens, have the vehicle inspected by your Toyota dealer as soon as possible.

4

Before driving

If you notice any symptoms

If you notice any of the following symptoms, refer to the following table for the likely cause and the solution.

If the symptom is not resolved by the solution, have the vehicle inspected by your Toyota dealer.

Symptom	Likely cause	Solution
The image is difficult to see.	The mirror surface is dirty.	Clean the mirror surface gently, using a soft dry cloth.
	Sunlight or headlights are shining directly into the Digital Rear-view Mirror.	Change to optical mirror mode. (If the light is coming through the panoramic moon roof [if equipped] close the electronic sunshade.)
	<ul style="list-style-type: none"> • The vehicle is in a dark area. • The vehicle is near a TV tower, broadcasting station, electric power plant, or other location where strong radio waves or electrical noise may be present. • The temperature around the camera is extremely high/low. • The ambient temperature is extremely low. • It is raining or humid. • Sunlight or headlights are shining directly into the camera lens. • The vehicle is under fluorescent lights, sodium lights, mercury lights, etc. • Water vapor from the tailpipe is obstructing the camera. 	Change to optical mirror mode. (Change back to digital mirror mode when the conditions have improved.)
The image is difficult to see.	Foreign matters such as water droplets or dust is on the camera lens.	<ul style="list-style-type: none"> • Operate the dedicated camera cleaning washer and clean the camera lens. (→P.190) • Change to optical mirror mode.

Symptom	Likely cause	Solution
The image is out of alignment.	The trunk is not fully closed.	Fully close the trunk.
	The camera or its surrounding area has received a strong impact.	Change to optical mirror mode and have the vehicle inspected by your Toyota dealer.
The display is dim and  is displayed.	The system may be malfunctioning.	Change to optical mirror mode and have the vehicle inspected by your Toyota dealer.
 goes off.		
 is displayed.	The Digital Rear-view Mirror is extremely hot. (The display will gradually become more dim. If the temperature continues to increase, the Digital Rear-view Mirror will turn off.)	Reducing the cabin temperature is recommended to reduce the temperature of the mirror. ( will disappear when the mirror becomes cool.) If  does not disappear even though the mirror is cool, have the vehicle inspected by your Toyota dealer.
The lever cannot be operated properly.	The lever may be malfunctioning.	Change to optical mirror mode and have the vehicle inspected by your Toyota dealer. (To change to optical mirror mode, press and hold the menu button for approximately 10 seconds.)

Outside rear view mirrors

The rear view mirror's position can be adjusted to enable sufficient confirmation of the rear view.

■ When using the outside rear view mirrors in a cold weather
→P.470

⚠ WARNING

■ **Important points while driving**

Observe the following precautions while driving. Failure to do so may result in loss of control of the vehicle and cause an accident, resulting in death or serious injury.

- Do not adjust the mirrors while driving.
- Do not drive with the mirrors folded.
- Both the driver and passenger side mirrors must be extended and properly adjusted before driving.

Adjustment procedure

- 1 To select a mirror to adjust, turn the switch.

A Left

B Right

- 2 To adjust the mirror, operate the switch.

A Up

B Right

C Down

D Left

■ **Mirror angle can be adjusted when**

The power switch is in ACC or ON.

■ **Defogging the mirrors**

The outside rear view mirrors can be cleared using the mirror defoggers. Turn on the rear window defogger to turn on the outside rear view mirror defoggers. (→P.477)

■ **Automatic adjustment of the mirror angle (if equipped)**

A desired mirror face angle can be entered to memory and recalled automatically by the driving position memory. (→P.199)

⚠ WARNING

■ **When the mirror defoggers are operating**

Do not touch the rear view mirror surfaces, as they can become very hot and burn you.

Folding and extending the mirrors

- 1** Folds the mirrors
- 2** Extends the mirrors

Putting the switch in the neutral position sets the mirrors to automatic mode. Automatic mode allows the folding or extending of the mirrors to be linked to locking/unlocking of the doors.

■ **Using automatic mode in cold weather**

→P.471

■ **Customization**

Some functions can be customized. (→P.674)

⚠ WARNING

■ **When a mirror is moving**

To avoid personal injury and mirror malfunction, be careful not to get your hand caught by the moving mirror.

Linked mirror function when reversing

When either “L” or “R” of the mirror select switch is selected, the outside rear view mirrors will automatically angle downwards

when the vehicle is reversing in order to give a better view of the ground.

To disable this function, select neither “L” nor “R”.

■ **Adjusting the mirror angle when the vehicle is reversing**

With the shift position in R, adjust the mirror angle at a desired position.

The adjusted angle will be memorized and the mirror will automatically tilt to the memorized angle whenever the shift position is shifted to R from next time.

The memorized downward tilt position of the mirror is linked to the normal position (angle adjusted with the shift position in other than R). Therefore, if the normal position is changed after adjustment, the tilt position will also change.

When the normal position is changed, readjust the angle in reversing.

4

Before driving

Power windows

Opening and closing the power windows

The power windows can be opened and closed using the switches.

Operating the switch moves the windows as follows:

- 1 Closing
- 2 One-touch closing*
- 3 Opening
- 4 One-touch opening*

*: To stop the window partway, operate the switch in the opposite direction.

■ The power windows can be operated when

The power switch is in ON

■ Operating the power windows after turning the fuel cell system off

The power windows can be operated for approximately 45 seconds even after the power switch is turned to ACC or turned off. They cannot, however, be operated once either front door is opened.

■ Jam protection function

If an object becomes jammed

between the window and the window frame while the window is closing, window movement is stopped and the window is opened slightly.

■ Catch protection function

If an object becomes caught between the door and window while the window is opening, window movement is stopped.

■ When the side window cannot be opened or closed

When the jam protection function or catch protection function operates unusually and the side window cannot be opened or closed, perform the following operations with the power window switch of that door.

- Stop the vehicle. With the power switch in ON, within 4 seconds of the jam protection function or catch protection function activating, continuously operate the power window switch in the one-touch closing direction or one-touch opening direction so that the side window can be opened and closed.

- If the side window cannot be opened and closed even when performing the above operations, perform the following procedure for function initialization.

- 1 Turn the power switch to ON.
- 2 Pull and hold the power window switch in the one-touch closing direction and completely close the side window.
- 3 Release the power window switch for a moment, resume pulling the switch in the one-touch closing direction, and hold it there for approximately 6 seconds or more.
- 4 Press and hold the power window switch in the one-touch opening direction. After the side window is completely opened, continue holding the switch for an additional 1 second or more.

- 5 Release the power window switch for a moment, resume pushing the switch in the one-touch opening direction, and hold it there for approximately 4 seconds or more.
- 6 Pull and hold the power window switch in the one-touch closing direction again. After the side window is completely closed, continue holding the switch for a further 1 second or more.

If you release the switch while the window is moving, start again from the beginning.

If the window reverses and cannot be fully closed or opened, have the vehicle inspected by your Toyota dealer.

■ **Door lock linked window operation**

- The power windows can be opened and closed using the mechanical key.* (→P.645)
- The power windows can be opened using the wireless remote control.* (→P.166)
- The alarm may be triggered if the alarm is set and the power window is closed using the door lock linked power window operation function. (→P.83)

*: These settings must be customized at your Toyota dealer.

■ **Power windows open warning buzzer**

A message is shown on the multi-information display when the power switch is turned to OFF and the driver's door is opened with the power windows open.

■ **Customization**

Some functions can be customized. (→P.682)

⚠ WARNING

Observe the following precautions. Failure to do so may result in death or serious injury.

■ **Closing the windows**

- The driver is responsible for all the power window operations, including the operation for the passengers. In order to prevent accidental operation, especially by a child, do not let a child operate the power windows. It is possible for children and other passengers to have body parts caught in the power window. Also, when riding with a child, it is recommended to use the window lock switch. (→P.198)
- Check to make sure that all passengers do not have any part of their body in a position where it could be caught when a window is being operated.

- When using the wireless remote control or mechanical key and operating the power windows, operate the power window after checking to make sure that there is no possibility of any passenger having any of their body parts caught in the window. Also do not let a child operate window by the wireless remote control or mechanical key. It is possible for children and other passengers to get caught in the power window.

⚠ WARNING

● When exiting the vehicle, turn the power switch off, carry the key and exit the vehicle along with the child. There may be accidental operation, due to mischief, etc., that may possibly lead to an accident.

■ **Jam protection function**

● Never use any part of your body to intentionally activate the jam protection function.

● The jam protection function may not work if something gets jammed just before the window is fully closed. Be careful not to get any part of your body jammed in the window.

■ **Catch protection function**

● Never use any part of your body or clothing to intentionally activate the catch protection function.

● The catch protection function may not work if something gets caught just before the window is fully opened. Be careful not to get any part of your body or clothing caught in the window.

■ **The power windows can be operated when**

The power switch is in ON.

■ **When the 12-volt battery is disconnected**

The window lock switch is disabled. If necessary, press the window lock switch after reconnecting the 12-volt battery.

Preventing accidental operation (window lock switch)

This function can be used to prevent children from accidentally opening or closing a passenger window.

Press the switch.

The indicator **A** will come on and the passenger windows will be locked.

Driving position memory*

*: If equipped

This feature automatically adjusts the positions of the driver's seat, steering wheel, outside rear view mirrors and head-up display (if equipped) to make entering and exiting the vehicle easier or to suit your preferences.

When My Settings is turned on:

Driving positions for the registered drivers (3 patterns) and guest (1 pattern) can be registered in My Settings.

When electronic key assignment is registered for My Settings, the driving position for each driver can be recalled (memory recall function).

When My Settings is turned off:

Up to 2 different driving positions can be recorded.

Each electronic key can be registered to recall your preferred driving position (memory recall function).

For details about My Settings, please refer to P.203

Enabling easier driver entry and exit (power easy access system)

The driver's seat and steering wheel are automatically adjusted to allow the driver to enter and exit the vehicle easily.

When all of the following have been performed, the driver's seat and steering wheel are automatically adjusted to a position that allows driver to enter and exit the vehicle easily.

- The shift position has been shifted to P.
- The power switch has been turned off.
- The driver's seat belt has been unfastened.

When any of the following has been performed, the seat and steering wheel automatically return to their original positions.

- The power switch has been turned to ACC or ON.
- The driver's seat belt has been fastened.

4

Before driving

■ Operation of the power easy access system

- When exiting the vehicle, the power easy access system may not operate if the seat is already close to the rearmost position, etc.
- If the seat position is adjusted during power easy access system operation, the automatic operation will stop. (The seat will change to manual operation.)
- If the seat position is adjusted during or after the power easy access system operation when the driver is exiting the vehicle, the power easy access system will not operate when entering the vehicle.

■ Jam protection function

If a person or object interferes while the seat is moving automatically, the operation will stop.

■ Customization

The seat movement amount settings of the power easy access system can be customized. (→P.674)

Recording/recalling a driving position

■ Recording procedure

- 1 Check that the shift position is in P.
- 2 Turn the power switch to ON.
- 3 Adjust the driver's seat, steering wheel, outside rear view mirrors and head-up display (if equipped) to the desired positions.
- 4 While pressing the "SET" button, or within 3 seconds after the "SET" button is pressed,

press button "1" or "2" until the buzzer sounds.

If the selected button has already been preset, the previously recorded position will be overwritten.

■ Recall procedure

- 1 Check that the shift position is in P.
- 2 Turn the power switch to ON.
- 3 Press one of the buttons for the driving position you want to recall until the buzzer sounds.

■ To stop the position recall operation part-way through

Perform any of the following operations:

- Press the "SET" button.
- Press button "1" or "2".
- Operate any of the seat adjustment switches (only cancels seat position recall).

- Operate the tilt and telescopic steering control switch (only cancels steering wheel position recall).

■ Jam protection function

If a person or object interferes while the seat is moving automatically, the operation will stop.

■ Using the voice control system (if equipped)

You can use the voice control system to do the following operations.

- Driving position registration
- Recalling the driving position (can be operated only when the shift position is in P)

For details regarding the voice control system, refer to the "MULTIMEDIA OWNER'S MANUAL".

■ Seat positions that can be memorized (→P.181)

The positions adjusted by the following procedure can be recorded:

- Seat position adjustment
- Seatback angle adjustment
- Seat cushion (front) angle adjustment
- Vertical height adjustment

■ Operating the driving position memory after turning the power switch off

Recorded seat positions can be activated up to 180 seconds after the driver's door is opened and another 60 seconds after it is closed again.

■ In order to correctly use the driving position memory function

If a seat position is already in the furthest possible position and the seat is operated in the same direction, the recorded position may be slightly different when it is recalled.

■ When recalling the driving position

Take care when recalling the driving position so that the head restraint does not touch the ceiling.

■ When the recorded seat position cannot be recalled

The seat position may not be recalled in some situations when the seat position is recorded in a certain range. For details, contact your Toyota dealer.

WARNING

■ Seat adjustment caution

Take care during seat adjustment so that the seat does not strike the rear passenger or squeeze your body against the steering wheel.

Registering/recall/canceling a driving position to an electronic key (memory recall function)

■ Registering procedure

Record your driving position to button "1" or "2" before performing the following:

Carry only the key you want to register, and then close the driver's door.

If 2 or more keys are in the vehicle, the driving position cannot be recorded properly.

- 1 Turn the power switch to ON.
- 2 Check that the shift position is in P.
- 3 Recall the driving position that you want to record.

- 4 While pressing the recalled button, press and hold the door lock switch (either lock or unlock) until the buzzer sounds.

If the button could not be registered, the buzzer sounds continuously for approximately 3 seconds.

■ Recall procedure

- 1 Make sure that the doors are locked before recalling the driving position. Carry the electronic key that has been registered to the driving position, and then unlock and open the driver's door using the smart key system wireless remote control.

The driving position will move to the recorded position (not including the steering wheel and head-up display [if equipped]). However, the seat will move to a position slightly behind the recorded position in order to make entering the vehicle easier.

If the driving position is in a position that has already been recorded, the seat and outside rear view mirrors will not move.

- 2 Turn the power switch to ACC or ON, or fasten a seat belt.

The seat, steering wheel and head-

up display (if equipped) will move to the recorded position.

■ Cancellation procedure

Carry only the key you want to cancel and then close the driver's door.

If 2 or more keys are in the vehicle, the driving position cannot be canceled properly.

- 1 Check that the shift position is in P.
- 2 Turn the power switch to ON.
- 3 While pressing the "SET" button, press and hold the door lock switch (either lock or unlock) until the buzzer sounds twice.

If the button could not be canceled, the buzzer sounds continuously for approximately 3 seconds.

■ When My Settings is turned on (an individual is identified with an electronic key)

The driving positions can be automatically recalled for each registered driver by registering electronic key assignments in My Settings.

● Registering procedure

When the shift position to P after driving the vehicle, the current driving position will be recorded.

● Recalled procedure

- 1 Carry only the key that has been assigned and registered in My Settings, and then unlock and open the driver's door using the smart

entry & start system or wireless remote control.

The driving position other than the head-up display (if equipped) will move to the recorded position. However, the seat will move to a position slightly behind the recorded position in order to make entering the vehicle easier.

If the driving position is in a position that has already been recorded, the driving position will not move.

- 2 Turn the power switch to ACC or ON.

The seat and head-up display (if equipped) will move to the recorded position. (The head-up display only moves when the power switch is turned to ON.)

- Cancellation procedure

Refer to the "MULTIMEDIA OWNER'S MANUAL".

■ Recalling the driving position using the memory recall function

- Different driving positions can be registered for each electronic key. Therefore, the driving position that is recalled may be different depending on the key being carried.
- If a door other than the driver's door is unlocked with the smart key system, the driving position cannot be recalled. In this case, press the driving position button which has been set.

■ Jam protection function

If a person or object interferes while the seat is moving automatically, the operation will stop.

■ Customization

Some functions can be customized. (→P.674)

My Settings

By recognizing an individual through Bluetooth devices, the vehicle settings recorded for that driver can be recalled when that individual enters the vehicle. By assigning an authentication device to a driver in advance, the vehicle can be entered with the preferred settings of the driver. Settings for up to 3 drivers can be recorded with My Settings. For details on how to assign/delete Bluetooth devices, set driver names, perform initialization, change drivers manually, or delete a driver, refer to the "MULTIMEDIA OWNER'S MANUAL".

Types of assigned authentication devices

An individual can be identified using the following authentication devices.

- Electronic key

An individual is identified when the smart key system detects their electronic key. (→P.160, 175)

- Digital Key*

An individual is identified when the smart key system detects their Digital Key. (→P.164)

For details on registering and deleting facial information, refer to the separate "MULTIMEDIA OWNER'S MANUAL"

An individual identified using facial identification is prioritized even when an individual is identified with an electronic or Digital Key.

- **Face identification**

Individuals are identified by detecting the face from the driver monitor.

- **Bluetooth devices**

An individual can be detected if the same Bluetooth device that was used as a hands free phone the last time the vehicle was entered is connected to the audio system.

*: If equipped

Recalled functions

When an individual is identified from an authentication device, settings for the following functions are recalled.

- Vehicle settings that can be set using the multimedia display
- Driving position (memory recall function)^{*1}

After an individual is identified, the driving position that was set when driving was last completed is recalled when either of the following operations is performed.

- Identification using electronic key:

The door is unlocked and opened using the smart key system or wire-

less remote control.

- Identification using Digital Key^{*1}:

The door is unlocked and opened using the smart key system.

Refer to P.199 for information on driving position registration and recall.

- Display settings^{*2} (meter, Multimedia Display)

When an individual is identified, the display settings used when the power switch was last turned off are recalled.

When an individual is identified, the vehicle settings used when the power switch was last turned off are recalled.

Driving the vehicle

The following procedures should be observed to ensure safe driving:

Driving procedure

■ Starting the fuel cell system

→P.219

■ Driving

- 1 With the brake pedal depressed, shift the shift position to D.

Check that the shift position indicator shows D.

- 2 If the parking brake is set, release the parking brake. (→P.231)
- 3 Gradually release the brake pedal and gently depress the accelerator pedal to accelerate the vehicle.

■ Stopping

- 1 Depress the brake pedal.
- 2 If necessary, set the parking brake.

If the vehicle is to be stopped for an extended period of time, shift the shift position to P. (→P.225)

■ Parking the vehicle

- 1 Depress the brake pedal to stop the vehicle completely.
- 2 If the parking brake is released, set the parking brake. (→P.231)

- 3 Shift the shift position to P. (→P.225)

Check that the shift position indicator shows P and the parking brake indicator is illuminated.

- 4 Press the power switch to stop the fuel cell system.
- 5 Slowly release the brake pedal.
- 6 Lock the door, making sure that you have the electronic key on your person.

If parking on a hill, block the wheels as needed.

■ Starting off on a steep uphill

- 1 Firmly depress the brake pedal and shift the shift position to D.

The hill-start assist control will be activated.

- 2 Set the parking brake. (→P.231)
- 3 Release the brake pedal and gently depress the accelerator pedal to accelerate the vehicle.
- 4 Release the parking brake. (→P.231)

■ For fuel-efficient driving

Keep in mind that fuel cell electric vehicles are similar to conventional vehicles, and it is necessary to refrain from activities such as sudden acceleration. (→P.103)

■ Driving in the rain

- Drive carefully when it is raining, because visibility will be reduced, the windows may become fogged-

up, and the road will be slippery.

- Drive carefully when it starts to rain, because the road surface will be especially slippery.
- Refrain from high speeds when driving on an expressway in the rain, because there may be a layer of water between the tires and the road surface, preventing the steering and brakes from operating properly.

■ ECO Accelerator Guidance (→P.121, 145)

Eco-friendly driving may be achieved more easily by staying within the zone of Eco acceleration. Also, by staying within the zone of Eco acceleration, it will be easier to obtain a good Eco score.

- When starting off:

Gradually depress the accelerator pedal to stay within the zone of Eco acceleration and accelerate to the desired speed. By refraining from excessive acceleration, a good eco start score will be obtained.

- When driving:

After accelerating to the desired speed, release the accelerator pedal and drive at a stable speed while staying within the zone of Eco acceleration. By staying within the zone of Eco acceleration, a good eco cruise score will be obtained.

- When stopping:

By starting to release the accelerator pedal early before decelerating, a good eco stop score will be obtained.

■ Restraining the fuel cell system output (Brake Override System)

- When the accelerator and brake pedals are depressed at the same time, the fuel cell system output may be restrained.

- A warning message is displayed on the multi-information display while the system is operating.

■ Breaking in your new Toyota

To extend the life of the vehicle, observing the following precautions is recommended:

- For the first 186 miles (300 km):
Avoid sudden stops.
- For the first 621 miles (1000 km):
 - Do not drive at extremely high speeds.
 - Avoid sudden acceleration.
 - Do not drive continuously in low gears.
 - Do not drive at a constant speed for extended periods.

■ Drum-in-disc type parking brake system

Your vehicle has a drum-in-disc type parking brake system. This type of brake system needs bedding-down of the brake shoes periodically or whenever the parking brake shoes and/or drum are replaced. Have your Toyota dealer perform the bedding down operation.

■ Operating your vehicle in a foreign country

Comply with the relevant vehicle registration laws and confirm the availability of the correct fuel. (→P.659)

WARNING

Observe the following precautions. Failure to do so may result in death or serious injury.

■ When starting the vehicle

Always keep your foot on the brake pedal while stopped with the "READY" indicator is illuminated. This prevents the vehicle from creeping.

**WARNING****■ When driving the vehicle**

- Do not drive if you are unfamiliar with the location of the brake and accelerator pedals to avoid depressing the wrong pedal.
- Accidentally depressing the accelerator pedal instead of the brake pedal will result in sudden acceleration that may lead to an accident.
- When backing up, you may twist your body around, leading to difficulty in operating the pedals. Make sure to operate the pedals properly.
- Make sure to keep a correct driving posture even when moving the vehicle only slightly. This allows you to depress the brake and accelerator pedals properly.
- Depress the brake pedal using your right foot. Depressing the brake pedal using your left foot may delay response in an emergency, resulting in an accident.
- The driver should pay extra attention to pedestrians as this vehicle is powered only by an electric motor (traction motor). As there is no engine noise, the pedestrians may misjudge the vehicle's movement. Even with the acoustic vehicle alerting system activate, drive with care as pedestrians in the vicinity may still not notice the vehicle if the surrounding area is noisy.

- During normal driving, do not turn off the fuel cell system. Turning the fuel cell system off while driving will not cause loss of steering or braking control, however, power assist to the steering will be lost. This will make it more difficult to steer smoothly, so you should pull over and stop the vehicle as soon as it is safe to do so. In the event of an emergency, such as if it becomes impossible to stop the vehicle in the normal way: →P.602
- Using the brakes continuously may cause the brakes to overheat and lose effectiveness when driving down a steep hill.
- Do not adjust the positions of the steering wheel, the seat, or the inside or outside rear view mirrors while driving. Doing so may result in a loss of vehicle control.
- Always check that all passengers' arms, heads or other parts of their body are not outside the vehicle.
- Do not drive in excess of the speed limit. Even if the legal speed limit permits it, do not drive over 85 mph (140 km/h) unless your vehicle has high-speed capability tires. Driving over 85 mph (140 km/h) may result in tire failure, loss of control and possible injury. Be sure to consult a tire dealer to determine whether the tires on your vehicle are high-speed capability tires or not before driving at such speeds.

■ When driving on slippery road surfaces

- Sudden braking, acceleration and steering may cause tire slippage and reduce your ability to control the vehicle.

⚠ WARNING

- Sudden acceleration or regenerative braking due to shifting could cause the vehicle to skid.
- After driving through a puddle, lightly depress the brake pedal to make sure that the brakes are functioning properly. Wet brake pads may prevent the brakes from functioning properly. If the brakes on only one side are wet and not functioning properly, steering control may be affected.
- **When shifting the shift position**
 - Do not let the vehicle roll backward while a forward driving position is selected, or roll forward while the shift position is in R. Doing so may result in an accident or damage to the vehicle.
 - Do not shift the shift position to P while the vehicle is moving. Doing so can damage the transmission and may result in a loss of vehicle control.
 - Do not shift the shift position to R while the vehicle is moving forward. Doing so can damage the transmission and may result in a loss of vehicle control.
 - Do not shift the shift position to a driving position while the vehicle is moving backward. Doing so can damage the transmission and may result in a loss of vehicle control.
 - Changing the shift position to N while the vehicle is moving will disengage the fuel cell system. Regenerative braking is not available with the fuel cell system disengaged.

- Be careful not to change the shift position with the accelerator pedal depressed. Changing the shift position to any positions other than P or N may lead to unexpected rapid acceleration of the vehicle that may cause an accident and result in death or serious injury. After changing the shift position, make sure to confirm the current shift position displayed on the shift position indicator inside the meter.

- **If you hear a squealing or scraping noise (brake pad wear limit indicators)**

Have the brake pads checked and replaced by your Toyota dealer as soon as possible.

Rotor damage may result if the pads are not replaced when needed.

It is dangerous to drive the vehicle when the wear limits of the brake pads and/or those of the brake discs are exceeded.

- **When the vehicle is stopped**

- Do not depress the accelerator pedal unnecessarily. If the shift position is in any position other than P or N, the vehicle may accelerate suddenly and unexpectedly, causing an accident.
- In order to prevent accidents due to the vehicle rolling away, always keep depressing the brake pedal while stopped with the "READY" indicator is illuminated, and apply the parking brake as necessary.

**WARNING**

- If the vehicle is stopped on an incline, in order to prevent accidents caused by the vehicle rolling forward or backward, always depress the brake pedal and securely apply the parking brake as needed.

■ When the vehicle is parked

- Do not leave glasses, cigarette lighters, spray cans, or soft drink cans in the vehicle when it is in the sun. Doing so may result in the following:
 - Gas may leak from a cigarette lighter or spray can, and may lead to a fire.
 - The temperature inside the vehicle may cause the plastic lenses and plastic material of glasses to deform or crack.
 - Soft drink cans may fracture, causing the contents to spray over the interior of the vehicle, and may also cause a short circuit in the vehicle's electrical components.
- Do not leave cigarette lighters in the vehicle. If a cigarette lighter is in a place such as the glove box or on the floor, it may be lit accidentally when luggage is loaded or the seat is adjusted, causing a fire.
- Do not attach adhesive discs to the windshield or windows. Do not place containers such as air fresheners on the instrument panel or dashboard. Adhesive discs or containers may act as lenses, causing a fire in the vehicle.

- Do not leave a door or window open if the curved glass is coated with a metallized film such as a silver-colored one. Reflected sunlight may cause the glass to act as a lens, causing a fire.

- Always apply the parking brake, shift the shift position to P, stop the fuel cell system and lock the vehicle. Do not leave the vehicle unattended while the "READY" indicator is illuminated. If the vehicle is parked with the shift position in P but the parking brake is not set, the vehicle may start to move, possibly leading to an accident.

■ When taking a nap in the vehicle

Always turn the fuel cell system off. Otherwise, if you accidentally move the shift lever or depress the accelerator pedal, causing the vehicle to unintentionally move, which can lead to an accident, resulting in death or serious injury.

■ When braking

- When the brakes are wet, drive more cautiously. Braking distance increases when the brakes are wet, and this may cause one side of the vehicle to brake differently than the other side. Also, the parking brake may not securely hold the vehicle.
- If the electronically controlled brake system does not operate, do not follow other vehicles closely and avoid hills or sharp turns that require braking. In this case, braking is still possible, but the brake pedal should be depressed more firmly than usual. Also, the braking distance will increase. Have your brakes fixed immediately.

⚠ WARNING

- The brake system consists of 2 or more individual hydraulic systems; if one of the systems fails, the other(s) will still operate. In this case, the brake pedal should be depressed more firmly than usual and the braking distance will increase. Have your brakes fixed immediately.

⚠ NOTICE**■ When driving the vehicle**

- Do not depress the accelerator and brake pedals at the same time during driving, as this may restrain the fuel cell system output.
- Do not use the accelerator pedal or depress the accelerator and brake pedals at the same time to hold the vehicle on a hill.

■ When parking the vehicle

Always set the parking brake, and shift the shift position to P. Failure to do so may cause the vehicle to move or the vehicle may accelerate suddenly if the accelerator pedal is accidentally depressed.

■ Avoiding damage to vehicle parts

- Do not turn the steering wheel fully in either direction and hold it there for an extended period of time.
Doing so may damage the power steering motor.
- When driving over bumps in the road, drive as slowly as possible to avoid damaging the wheels, underside of the vehicle, etc.

■ If you get a flat tire while driving

A flat or damaged tire may cause the following situations. Hold the steering wheel firmly and gradually depress the brake pedal to slow down the vehicle.

- It may be difficult to control your vehicle.
- The vehicle will make abnormal sounds or vibrations.
- The vehicle will lean abnormally.

Information on what to do in case of a flat tire (→P.629)

■ When encountering flooded roads

Do not drive on a road that has flooded after heavy rain, etc. Doing so may cause the following serious damage to the vehicle:

- Fuel cell system stalling
- Short in electrical components
- Fuel cell system damage caused by water immersion

In the event that you drive on a flooded road and the vehicle is flooded, be sure to have your Toyota dealer check the following:

- Fuel cell system
- Brake function
- Changes in quantity and quality of transmission fluid, etc.
- Lubricant condition for the bearings and suspension joints (where possible), and the function of all joints, bearings, etc.

**NOTICE**

If the shift control system is damaged by flooding, it may not be possible to shift the shift position to P, or from P to other positions. In this case, contact your Toyota dealer.

Sudden start restraint control (Drive-Start Control [DSC])

When the following unusual operation is performed with the accelerator pedal depressed, the fuel cell system output may be restrained.

- When the shift position is shifted to R*.
- When the shift position is shifted from P or R to forward drive shift position such as D*.

When the system operates, a message appears on the multi-information display. Read the message and follow the instruction.

*: Depending on the situation, the shift position may not be changed.

■ Drive-Start Control (DSC)

- When the TRAC is turned off (→P.465), sudden start restraint control also does not operate. If your vehicle have trouble escaping from the mud or fresh snow due to sudden start restraint control operation, deactivate TRAC (→P.465) so that the vehicle may become able to escape from the mud or fresh snow.

Cargo and luggage

Take notice of the following information about storage precautions, cargo capacity and load:

Capacity and distribution

Cargo capacity depends on the total weight of the occupants.

(Cargo capacity) = (Total load capacity) — (Total weight of occupants)

Steps for Determining Correct Load Limit —

(1) Locate the statement “The combined weight of occupants and cargo should never exceed XXX kg or XXX lbs.” on your vehicle’s placard.

(2) Determine the combined weight of the driver and passengers that will be riding in your vehicle.

(3) Subtract the combined weight of the driver and passengers from XXX kg or XXX lbs.

(4) The resulting figure equals the available amount of cargo and luggage load capacity.

For example, if the “XXX” amount equals 1400 lbs. and there will be five 150 lb passengers in your vehicle, the amount of available cargo and luggage load capacity is 650 lbs. (1400 –

750 (5 × 150) = 650 lbs.)

(5) Determine the combined weight of luggage and cargo being loaded on the vehicle. That weight may not safely exceed the available cargo and luggage load capacity calculated in Step 4.

(6) If your vehicle will be towing a trailer, load from your trailer will be transferred to your vehicle. Consult this manual to determine how this reduces the available cargo and luggage load capacity of your vehicle. (→P.216)

Toyota does not recommend towing a trailer with your vehicle. Your vehicle is not designed for trailer towing.

Calculation formula for your vehicle

- A** Cargo capacity
- B** Total load capacity (vehicle capacity weight) (→P.658)

When 2 people with the combined weight of A lb. (kg) are riding in your vehicle, which has a

total load capacity (vehicle capacity weight) of B lb. (kg), the available amount of cargo and luggage load capacity will be C lb. (kg) as follows:

$$B^{*2} \text{ lb. (kg)} - A^{*1} \text{ lb. (kg)} = C^{*3} \text{ lb. (kg)}$$

*1: A =Weight of people

*2: B =Total load capacity

*3: C =Available cargo and luggage load

In this condition, if 3 more passengers with the combined weight of D lb. (kg) get on, the available cargo and luggage load will be reduced E lb. (kg) as follows:

$$C \text{ lb. (kg)} - D^{*4} \text{ lb. (kg)} = E^{*5} \text{ lb. (kg)}$$

*4: D =Additional weight of people

*5: E =Available cargo and luggage load

As shown in the example above, if the number of occupants increases, the cargo and luggage load will be reduced by an amount that equals the increased weight due to the additional occupants. In other words, if an increase in the number of occupants causes an excess of the total load capacity (combined weight of occupants plus cargo and luggage load), you must reduce the cargo and luggage on your vehicle.

⚠ WARNING**■ Things that must not be carried in the trunk**

The following things may cause a fire if loaded in the trunk:

- Receptacles containing gasoline
- Aerosol cans

■ Storage precautions

Observe the following precautions.

Failure to do so may prevent the pedals from being depressed properly, may block the driver's vision, or may result in items hitting the driver or passengers, possibly causing an accident.

- Stow cargo and luggage in the trunk whenever possible.
- Do not place cargo or luggage in or on the following locations.
 - At the feet of the driver
 - On the front passenger or rear seats (when stacking items)
 - On the package tray
 - On the instrument panel
 - On the dashboard
- Secure all items in the occupant compartment.

■ Capacity and distribution

- Do not exceed the maximum axle weight rating or the total vehicle weight rating.
- Even if the total load of occupant's weight and the cargo load is less than the total load capacity, do not apply the load unevenly. Improper loading may cause deterioration of steering or braking control which may cause death or serious injury.

Vehicle load limits**Vehicle load limits include total load capacity, seating capacity, towing capacity and cargo capacity.**

- Total load capacity (vehicle capacity weight): →P.658

Total load capacity means the combined weight of occupants, cargo and luggage.

- Seating capacity: →P.658

Seating capacity means the maximum number of occupants whose estimated average weight is 150 lb. (68 kg) per person.

- TWR (Trailer Weight Rating)

Toyota does not recommend towing a trailer with your vehicle.

- Cargo capacity

Cargo capacity may increase or decrease depending on the weight and the number of occupants.

■ Total load capacity and seating capacity

These details are also described on the tire and loading information label. (→P.584)

⚠ WARNING

■ Overloading the vehicle

Do not overload the vehicle. It may not only cause damage to the tires, but also degrade steering and braking ability, resulting in an accident.

Trailer towing

Toyota does not recommend towing a trailer with your vehicle. Toyota also does not recommend the installation of a tow hitch or the use of a tow hitch carrier for a wheelchair, scooter, bicycle, etc. Your vehicle is not designed for trailer towing or for the use of tow hitch mounted carriers.

Dinghy towing

Your vehicle is not designed to be dinghy towed (with 4 wheels on the ground) behind a motor home.

 NOTICE

■ **To avoid serious damage to your vehicle**

Do not tow your vehicle with the four wheels on the ground.

Power switch

Performing the following operations when carrying the electronic key on your person starts the fuel cell system or changes power switch modes.

Starting the fuel cell system

- 1 Pull the parking brake switch to check that the parking brake is set. (→P.231)

The parking brake indicator will come on.

- 2 Firmly depress the brake pedal.

 and a message will be displayed on the multi-information display.

If it is not displayed, the fuel cell system cannot be started.

When the shift position is N, the fuel cell system cannot start. Shift the shift position to P when starting the fuel cell system. (→P.225)

- 3 Press the power switch shortly and firmly.

When operating the power switch, one short, firm press is enough. It is not necessary to press and hold the switch.

If the “READY” indicator turns on, the fuel cell system will operate normally.

Continue depressing the brake pedal until the “READY” indicator is illuminated.

The fuel cell system can be started

from any power switch mode.

- 4 Check that the “READY” indicator is illuminated.

The vehicle cannot be driven if the “READY” indicator is off.

■ Power switch illumination*

*: If equipped

According to the situation, the power switch illumination operates as follows.

- When driver' door or front passenger' door is opened, the power switch illumination illuminates.
- When the power switch is in OFF and depressing the brake pedal with carrying the electronic key on your person, the power switch illumination blinks.
- When the power switch is in ACC or ON, the power switch illumination illuminates.
- When the power switch mode is changed from ACC or ON to OFF, the power switch illumination illuminates for a certain amount of time. Afterwards, the power switch illumination turns off.

■ Starting the fuel cell system in cold temperatures

- When the fuel cell system is started during cold temperatures, the fuel cell stack quickly warms up using waste heat during power generation. Operation noises will be louder than usually, but this is not a malfunction. Depending on

the situation, the operation noises may also continue for a fixed period of time after the "READY" indicator is turned on. (→P.89)

- When the temperatures are cold, it may take more time than usual until the "READY" indicator turns on. In those cases, the progress state is displayed in the multi-information display.

A "FCV System is Warmed Up Waiting..."

- When starting the fuel cell system during cold weather, "FCV System Shutdown Due to Freezing Stop in a Safe Place See Owner's Manual" may be displayed in the multi-information display.

The fuel cell system is frozen and cannot be started. Contact your Toyota dealer.

- The power output will be temporarily limited until the fuel cell system reaches full operating temperature.
- When the traction battery is extremely cold (below approximately -22°F [-30°C]) under the influence of outside temperature, it may not be possible to start the fuel cell system. In this case, try to start the fuel cell system again after the temperature of the traction battery increases due to the outside temperature increase etc.

■ **If the fuel cell system does not start**

- The immobilizer system may not have been deactivated. (→P.82) Contact your Toyota dealer.

- If a message related to start-up is shown on the multi-information display, read the message and follow the instructions.

- Check that the fuel door is closed. When the fuel door is open, the fuel cell system cannot be started. Close the fuel door before starting the system. (→P.255)

- If the door is unlocked with the mechanical key, the fuel cell system cannot be started using the smart key system. Refer to P.646 to start the fuel cell system. However, if the electronic key is carried inside the vehicle and the doors are locked (→P.169), the fuel cell system can be started.

■ **Sounds and vibrations specific to a fuel cell electric vehicle**

→P.90

■ **If the 12-volt battery is discharged**

The fuel cell system cannot be started using the smart key system. Refer to P.647 to restart the fuel cell system.

■ **Electronic key battery depletion**

→P.160

■ **Conditions affecting operation**

→P.177

■ **Notes for the entry function**

→P.178

■ **If "Smart Key System Malfunction See Owner's Manual" is displayed on the multi-information display**

The system may be malfunctioning. Have the vehicle inspected by your Toyota dealer immediately.

■ **If the "READY" indicator does not come on**

In the event that the "READY" indicator does not come on even after performing the proper procedures for starting the vehicle, contact your Toyota dealer immediately.

■ **If the fuel cell system is malfunctioning**

→P.622

■ **Electronic key battery**

→P.592

■ **Operation of the power switch**

- If the switch is not pressed shortly and firmly, the power switch mode may not change or the fuel cell system may not start.
- If attempting to restart the fuel cell system immediately after turning the power switch off, the fuel cell system may not start in some cases. After turning the power switch off, please wait a few seconds before restarting the fuel cell system.

■ **Customization**

If the smart key system has been deactivated in a customized setting, refer to P.644.

WARNING

■ **When starting the fuel cell system**

Always start the fuel cell system while sitting in the driver's seat. Do not depress the accelerator pedal while starting the fuel cell system under any circumstances. Doing so may cause an accident resulting in death or serious injury.

NOTICE

■ **When starting the fuel cell system**

If the fuel cell system becomes difficult to start, have your vehicle checked by your Toyota dealer immediately.

■ **Symptoms indicating a malfunction with the power switch**

If the power switch seems to be operating somewhat differently than usual, such as the switch sticking slightly, there may be a malfunction. Contact your Toyota dealer immediately.

Stopping the fuel cell system

- 1 Stop the vehicle completely.
- 2 Set the parking brake. (→P.231)
- 3 Press the P position switch. (→P.225)

Check that the shift position indicator shows P and the parking brake indicator is illuminated.

- 4 Press the power switch.

The fuel cell system will stop, and the meter display will be extinguished (the shift position indicator will be extinguished a few seconds after the meter display).

- 5 Release the brake pedal and check that "ACCESSORY", "POWER ON"*1 or "IGNITION ON"*2 is not shown on the meter.

*1: Vehicles without Toyota Teammate Advanced Drive

*2: Vehicles with Toyota Teammate Advanced Drive

■ **Stopping the fuel cell system in cold temperatures**

- When the power switch is pressed and the fuel cell system is stopped during cold temperatures, the time

for water purge from the tailpipe may be longer than usual to prevent liquid in the fuel cell stack from freezing.

- If the “FCV System Purge in Progress Purge will Stop Automatically” is displayed in the multi-information display, however it is no problem to exit the vehicle.
- The water purge time may also be long if the system is stopped before fuel cell system warm-up is completed.
- It is normal to hear hissing and other sounds during purge. (→P.89)
- It is not a problem to do refueling operations while the system is purging. The purging process is carried out automatically after several minutes and a white mist may be emitted, however this is not a malfunction.

■ Parking the vehicle during cold weather

- Water may automatically purge from the tailpipe, even when the fuel cell system is off, in order to prevent liquid in the fuel cell stack, hydrogen pipelines, etc., from freezing. Also, water vapor may be purged, but this is not malfunction.
- It is normal to hear hissing and other sounds during purge. (→P.89)

■ Automatic fuel cell system shut off feature

- The vehicle is equipped with a feature that automatically shuts off the fuel cell system when the shift position is in P with the fuel cell system operating for an extended period.
- The fuel cell system will automatically shut off after approximately 1 hour if it has been left running while the shift position is in P.

- The timer for the automatic fuel cell system shut off feature will reset if the brake pedal is depressed or if the shift position is in a position other than P.
- After the vehicle is parked, if the door is locked with the door lock switch (→P.169) from the inside or the mechanical key from the outside, the automatic fuel cell system shut off feature will be disabled. The timer for the automatic fuel cell system shut off feature will be re-enabled if the driver's door is opened.

■ When the shift control system malfunctions

When attempting to turn the power switch off while there is a malfunction in the shift control system, the power switch mode may change to ACC. In this case, ACC may be turned off by applying the parking brake and pressing the power switch again.

If there is a malfunction in the system, have the vehicle inspected by your Toyota dealer immediately.

■ Automatic P position selection function

→P.227

■ Water release (H₂O switch)

→P.236

⚠ WARNING**■ Stopping the fuel cell system in an emergency**

- If you want to stop the fuel cell system in an emergency while driving the vehicle, press and hold the power switch for more than 2 seconds, or press it briefly 3 times or more in succession. (→P.602)
However, do not touch the power switch while driving except in an emergency. Turning the fuel cell system off while driving will not cause loss of steering or braking control. However, power assist for the steering wheel may be lost making it difficult to steer smoothly before stopping the vehicle depending on the remaining charge in the 12-volt battery or usage conditions. In this situation, you should pull over and stop the vehicle as soon as it is safe to do so.
- If the power switch is operated while the vehicle is running, a warning message will be shown on the multi-information display and a buzzer sounds.
- When restarting the fuel cell system after an emergency shutdown, shift the shift position to N and press the power switch.

Changing power switch modes

Modes can be changed by pressing the power switch with the brake pedal released. (The mode changes each time the switch is pressed.)

A “ACCESSORY”

B “POWER ON”^{*1} or “IGNITION ON”^{*2}

1 OFF

The emergency flashers can be used.

2 ACC^{*3}

Some electrical components such as the audio system can be used. “ACCESSORY” will be displayed on the meter.

3 ON

All electrical components can be used.

“POWER ON”^{*1} or “IGNITION ON”^{*2} will be displayed on the meter.

^{*1}: Vehicles without Toyota Teammate Advanced Drive

^{*2}: Vehicles with Toyota Teammate Advanced Drive

^{*3}: Setting can be customized. (Vehicles without Toyota Teammate Advanced Drive) (→P.681)

■ **When ACC customization is in off (vehicles without Toyota Teammate Advanced Drive)**

- With the power switch is turned off, the multimedia system can still be used for a certain time until the battery saving function starts operating.
- When the safe exit assist is operating, a buzzer will sound. (→P.341)

■ **Auto power off function**

- Vehicles with Toyota Teammate Advanced Drive: If the vehicle is left in ACC for more than 20 minutes or ON (with fuel cell system not operating) for more than an hour with the shift position in P, the power switch will automatically turn off. However, this function cannot entirely prevent the 12-volt battery discharge. Do not leave the vehicle with the power switch in ACC or ON for long periods of time when the fuel cell system is not operating.
- Vehicles without Toyota Teammate Advanced Drive: If the vehicle is left in ACC or ON (with fuel cell system not operating) for more than 20 minutes with the shift position in P, the power switch will automatically turn off. However, this function cannot entirely prevent the 12-volt battery discharge. Do not leave the vehicle with the power switch in ACC or ON for long periods of time when the fuel cell system is not operating.

● If “ACCESSORY”, “POWER ON”^{*1} or “IGNITION ON”^{*2} is displayed on the meter, the power switch is not off. Exit the vehicle after turning the power switch off.

^{*1}: Vehicles without Toyota Teammate Advanced Drive

^{*2}: Vehicles with Toyota Teammate Advanced Drive

NOTICE

■ **To prevent 12-volt battery discharge**

- Do not leave the power switch in ACC or ON for long periods of time without the fuel cell system on.

Shift position

Select the shift position depending on your purpose and situation.

Shift position purpose and functions

Shift position	Objective or function
P	Parking the vehicle/starting the fuel cell system
R	Reversing
N	Neutral
D	Normal driving

Br mode is not a shift position. (→P.229)

■ If a message about a shift operation is shown

To prevent the shift position from being selected incorrectly or the vehicle from moving unexpectedly, the shift position may be changed automatically or operating the shift lever may be required. In this case, change the shift position following the messages on the multi-information display.

 NOTICE

■ Situations where shift control system malfunctions are possible

If any of the following situations occurs, shift control system malfunctions are possible. Immediately stop the vehicle in a safe place on level ground, apply the parking brake, and then contact your Toyota dealer.

- When the warning message indicating the shift control system appears on the multi-information display. (→P.622)
- The display indicates that no shift position is selected for more than a few seconds.

Shift position display and how to change the shift position

5

Driving

A Shift lever

Operate the shift lever gently and

securely in the direction of the arrow on the shift position indicator. To shift to N, slide the shift lever in the direction of the arrow and hold it.

Release the shift lever after each shifting operation to allow it to

return to its regular position (●).

Shifting to Br mode is only possible when the shift position is in D.

When shifting from P to N, D or R, from N, D, Br mode or R to P, from D or Br mode to R, or from R to D, ensure that the brake pedal is being depressed and the vehicle is stationary.

B Shift position indicator

Meter display:

The current shift position is highlighted.

C P position switch

Fully stop the vehicle and set the parking brake, and then press the P position switch.

When the shift position is changed to P, the switch illuminates.

Check that the shift position indicator shows P.

Changing the shift position in each power switch mode

- The shift position cannot be changed when the power switch is in ACC or off.
 - When the power switch is in ON, if the READY indicator is not illuminated, the shift position can only be changed to N.
 - When the READY indicator is illuminated, the shift position can be changed from P to D, N, or R.
 - When the READY indicator is flashing, the shift position cannot be changed from P to any other position, even if the shift lever is operated. Operate the shift lever again after the READY indicator changes from flashing to illuminated.
- #### **Shifting the shift position from P to other positions**
- While depressing the brake pedal firmly, operate the shift lever. If the shift lever is operated without depressing the brake pedal, the buzzer will sound and the shifting operation will be disabled.
 - When selecting the shift position, make sure that the shift position has been changed to the desired position by checking the shift position indicator provided on the instrument cluster.
 - The shift position cannot be changed from P to Br mode directly.
- #### **The shift position cannot be changed when**
- In the following situations, a buzzer will sound to inform you that the shift position cannot be changed. Use the appropriate operation to attempt to change the shift position again.
- When attempting to change the shift position from P with the brake pedal not depressed
 - When attempting to change the shift position from P with the accelerator pedal depressed
 - When attempting to change the shift position from N while stopped or driving at an extremely low speed with the brake pedal not depressed
 - When attempting to change the shift position from N while stopped or driving at an extremely low speed with the accelerator pedal depressed
 - When attempting to change the shift position from P or N to Br

mode

- When the P position switch is pressed while driving

When driving at an extremely low speed, the shift position may change to P.

■ The shift position automatically changes to N when

In the following situations, a buzzer will sound to inform you that the shift position has been changed to N. Use the appropriate operation to attempt to change the shift position again.

- When attempting to change the shift position to R while the vehicle is moving forward

When driving at a low speed, the shift position may change to R.

- When attempting to change the shift position to D while the vehicle is moving backward

When driving at a low speed, the shift position may change to D.

- When attempting to change the shift position from R to Br mode

■ If the N shift position is selected while driving

If the shift lever is moved to N while driving above a certain speed, the shift position will change to N without holding the shift lever in the N position. In this situation, a buzzer will sound and a message will be displayed on the multi-information display to inform you that the shift position has been changed to N.

■ Automatic P position selection function

In the following situations, the shift position is automatically changed to P.

- When pressing the power switch with the vehicle stopped while the power switch is in ON and the shift position is in a position other than P (after the shift position has

changed to P, the power switch will turn off)*

- If the driver's door is opened and all of the following conditions are met, while the shift position is in a position other than P
 - The power switch is in ON.
 - The driver is not wearing the seat belt.
 - The brake pedal is not depressed.

To start off the vehicle after the shift position is changed to P, operate the shift lever again.

- When the vehicle is stopped after the fuel cell system has been stopped in an emergency while driving.
- When voltage of the 12-volt battery drops while the shift position is in a position other than P.

*: When the power switch is pressed while driving at extremely slow speeds, such as immediately before stopping the vehicle, the shift position may automatically change to P. Make sure that the vehicle is completely stopped before pressing the power switch.

■ If the shift position cannot be shifted from P

There is a possibility that the 12-volt battery is discharged. Check the 12-volt battery in this situation. (→P.647)

■ Customization

Some functions can be customized. (→P.675)

⚠ WARNING**■ For the shift lever**

- Do not remove the shift lever knob or use anything but a genuine TOYOTA shift lever knob. Also, do not hang anything on the shift lever. Doing so could prevent the shift lever from returning to position, causing unexpected accidents to occur when the vehicle is in motion.
- In order to prevent the shift position from accidentally being changed, do not touch the shift lever when not using them.

■ P position switch

- Do not press the P position switch while the vehicle is moving.
If the P position switch is pressed when driving at very low speeds (for example, directly before stopping the vehicle), the vehicle may stop suddenly when the shift position switches to P, which could lead to an accident.
- In order to prevent the shift position from accidentally being changed, do not touch the P position switch when not using them.

⚠ NOTICE**■ Notes regarding shift lever and P position switch operation**

Avoid repeatedly operating the shift lever and P position switch in quick succession. The system protection function may activate and it will not be temporarily possible to shift the shift position other than P. If this happens, please wait for a while before attempting to change the shift position again.

■ When exiting the vehicle (driver's seat only)

Check that the shift position indicator shows P and that the parking brake indicator is illuminated before opening the door and exiting the vehicle.

Keeping the shift position in N without activating the automatic P position selection function

- By performing the following operation, the shift position can be held in N until the shift position switches to P without activating the automatic P position selection function.
 - 1 Operate the shift lever and change the shift position to N when the fuel cell system is operating.
 - 2 Return the shift lever to its regular position (●).
 - 3 Operate the shift lever to N and hold it there until the buzzer sounds.
 - 4 Press the power switch within 5 seconds after the buzzer sounds.

The fuel cell system stops with the shift position in N.*
Make sure to check that the buzzer sounds and "Holding N Push P Switch When Done" is displayed on the multi-information display.

- In order to shift to a position other than N, first press the P position switch to change the

shift position to P.

- If the automatic P position switching operation selection function is performed operated with the fuel cell system stopped, the automatic P position switching selection function may not operate.

Always perform the operation with the fuel cell system started.

*: To keep this state, do not operate the power switch. If the power switch is operated repeatedly, the power switch will turn off after the shift position has automatically changed to P.

■ Br mode

Depending on the condition of the traction battery, Br mode may not be available. In that case, a message is displayed on the multi-information display.

■ Sounds when in Br mode

→P.89

Selecting the driving mode

■ Driving mode

→P.462

■ Snow mode

→P.463

■ Br mode

Suitable for driving that requires strong deceleration force, such as down-hill driving, etc.

To select Br mode, shift the shift lever down.

The Br mode indicator will illuminate on the meter.

To return to normal driving mode, depress the accelerator pedal or select the D position again with the shift lever.

Turn signal lever

Operating instructions

- 1 Right turn
- 2 Lane change to the right
(move the lever partway and release it)
The right hand signals will flash 3 times.
- 3 Lane change to the left
(move the lever partway and release it)
The left hand signals will flash 3 times.
- 4 Left turn

■ **Turn signals can be operated when**

The power switch is in ON.

■ **If the indicator flashes faster than usual**

Have the vehicle inspected by your Toyota dealer.

■ **If the turn signals stop flashing before a lane change has been performed**

Operate the lever again.

Parking brake

The parking brake can be set or released automatically or manually.

In automatic mode, the parking brake can be set or released automatically according to the shift lever operation. Also, even in automatic mode, the parking brake can be set or released manually.

Operating instructions

■ **Using the manual mode**

The parking brake can be set and released manually.

A U.S.A.

B Canada

- 1 Pull the switch to set the parking brake

The parking brake indicator light will turn on.

Pull and hold the parking brake switch if an emergency occurs and it is necessary to operate the parking brake while driving.

- 2 Push the switch to release the parking brake
 - Operate the parking brake switch while depressing the brake pedal.
 - Using the parking brake automatic release function, the parking brake can be released by depressing the accelerator pedal. When using this function, slowly depress the accelerator pedal.

Make sure that the parking brake indicator light turn off.

■ **Turns automatic mode on**

While the vehicle is stopped, pull and hold the parking brake switch until a message is shown on the multi-information display.

A "EPB Shift Interlock Function Activated"

When the automatic mode is turned on, the parking brake operates as follows.

- When the shift position is shifted from P, the parking brake will be released, and the parking brake indicator light will turn off.

- When the shift position is shifted to P, the parking brake will be set, and the parking brake indicator light will turn on.

Operate the shift lever and P position switch with the vehicle stopped and the brake pedal depressed.

■ Turns automatic mode off

While the vehicle is stopped, press and hold the parking brake switch until a message is shown on the multi-information display.

A “EPB Shift Interlock Function Deactivated”

Operate the shift lever and P position switch with the vehicle stopped and the brake pedal depressed.

■ Parking brake operation

- When the power switch is not in ON, the parking brake cannot be released using the parking brake switch.
- When the power switch is not in ON, automatic mode (automatic brake setting and releasing) is not available.

■ Parking brake automatic release function

- When the shift position is shifted from P, the parking brake will be released in automatic mode.
- When all of the following conditions are met in manual mode, the parking brake can be released by depressing the accelerator pedal.
 - The driver's door is closed
 - The driver is wearing the seat belt
 - The shift position is in D or R

■ If “Parking Brake Temporarily Unavailable” is displayed on the multi-information display

If the parking brake is operated repeatedly over a short period of time, the system may restrict operation to prevent overheating. If this happens, refrain from operating the parking brake. Normal operation will return after about 1 minute.

■ If “Parking Brake Unavailable” is displayed on the multi-information display

Operate the parking brake switch. If the message does not disappear after operating the switch several times, the system may be malfunctioning. Have the vehicle inspected by your Toyota dealer.

■ Parking brake operation sound

When the parking brake operates, a motor sound (whirring sound) may be heard. This does not indicate a malfunction.

■ Parking brake operation

- Depending on the power switch mode, the parking brake indicator light will turn on and stay on as described below:
 - ON: Comes on until the parking brake is released.
 - Not in ON: Stays on for approximately 15 seconds.
- When the power switch is turned off with the parking brake set, the parking brake indicator light will stay on for about 15 seconds. This

does not indicate a malfunction.

■ **When the parking brake switch malfunctions**

Automatic mode (automatic brake setting and releasing) will be turned on automatically.

■ **Parking the vehicle**

→P.208

■ **Parking brake engaged warning buzzer**

A buzzer will sound if the vehicle is driven with the parking brake engaged. "Parking Brake ON" is displayed on the multi-information display. (with the vehicle reached a speed of 3 mph [5 km/h])

■ **If the parking brake indicator flashes**

→P.618

■ **Usage in winter time**

→P.470

■ **When the parking brake cannot be released due to a malfunction**

Driving the vehicle with the parking brake set will lead to brake components overheating, which may affect braking performance and increase brake wear.

Have the vehicle inspected by your Toyota dealer immediately if this occurs.

 **WARNING**

■ **When parking the vehicle**

Do not leave a child in the vehicle alone. The parking brake may be released unintentionally and there is the danger of the vehicle moving that may lead to an accident resulting in death or serious injury.

 **NOTICE**

■ **When parking the vehicle**

Before you leave the vehicle, set the parking brake, shift the shift position to P and make sure that the vehicle does not move.

■ **When the system malfunctions**

Stop the vehicle in a safe place and check the warning messages.

Brake Hold

The brake hold system keeps the brake applied when the shift position is in D or N with the system on and the brake pedal has been depressed to stop the vehicle. The system releases the brake when the accelerator pedal is depressed with the shift position in D to allow smooth start off.

Enabling the system

Turns the brake hold system on

The brake hold standby indicator (green) **A** comes on. While the system is holding the brake, the brake hold operated indicator (yellow) **B** comes on.

Brake hold system operating conditions

The brake hold system cannot be turned on in the following conditions:

- The driver's door is not closed.
- The driver is not wearing the seat

belt.

- The parking brake is engaged.

If any of the conditions above are detected when the brake hold system is enabled, the system will turn off and the brake hold standby indicator light will go off. In addition, if any of the conditions are detected while the system is holding the brake, a warning buzzer will sound and a message will be shown on the multi-information display. The parking brake will then be set automatically.

Brake hold function

- If the brake pedal is left released for a period of about 3 minutes after the system has started holding the brake, the parking brake will be set automatically. In this case, a warning buzzer sounds and a message is shown on the multi-information display.
- To turn the system off while the system is holding the brake, firmly depress the brake pedal and press the button again.
- The brake hold function may not hold the vehicle when the vehicle is on a steep incline. In this situation, it may be necessary for the driver to apply the brakes. A warning buzzer will sound and the multi-information display will inform the driver of this situation. If a warning message is shown on the multi-information display, read the message and follow the instructions.

When the parking brake is set automatically while the system is holding the brakes

Perform any of the following operations to release the parking brake.

- Depress the accelerator pedal. (The parking brake will not be released automatically if the seat belt is not fastened.)
- Operate the parking brake switch with the brake pedal depressed.

Make sure that the parking brake indicator light goes off. (→P.231)

■ **When an inspection at your Toyota dealer is necessary**

When the brake hold standby indicator (green) does not illuminate even when the brake hold switch is pressed with the brake hold system operating conditions met, the system may be malfunctioning. Have the vehicle inspected at your Toyota dealer.

■ **If “Brake Hold Malfunction Press Brake to Deactivate Visit Your Dealer” or “Brake Hold Malfunction Visit Your Dealer” is displayed on the multi-information display**

The system may be malfunctioning. Have the vehicle inspected by your Toyota dealer.

■ **Warning messages and buzzers**

Warning messages and buzzers are used to indicate a system malfunction or to inform the driver of the need for caution. If a warning message is shown on the multi-information display, read the message and follow the instructions.

■ **If the brake hold operated indicator flashes**

→P.618

WARNING

■ **When the vehicle is on a steep incline**

When using the brake hold system on a steep incline exercise caution. The brake hold function may not hold the vehicle in such a situation.

■ **When stopped on a slippery road**

The system cannot stop the vehicle when the gripping ability of the tires has been exceeded. Do not use the system when stopped on a slippery road.

NOTICE

■ **When parking the vehicle**

The brake hold system is not designed for use when parking the vehicle for a long period of time. Turning the power switch off while the system is holding the brake may release the brake, which would cause the vehicle to move. When operating the power switch, depress the brake pedal, shift the shift position to P and set the parking brake.

ASC (Active Sound Control)*

*: If equipped

The ASC is a system that conveys the operating conditions, such as acceleration and deceleration of the vehicle, with sounds to the driver. The vehicle's reaction with regards to the driver's acceleration and brake operations are conveyed with sound. The respective tone changes for normal mode and sport mode. (→P.462)

■ Customization

Some functions can be customized. (→P.682)

■ Operating conditions

When the driving mode select switch is not in Eco drive mode.

■ Temporary cancelation of the ASC system functions

The ASC system may be temporarily canceled depending on the driving conditions, such as when the tires slip due to sudden acceleration.

The tones may not sound if the driving mode is switched continuously in short time periods.

Water release (H₂O switch)

When the fuel cell system is stopped, water is automatically purged from the tailpipe.

To minimize water accumulation at parking garages, etc., purge can be done manually before parking.

H₂O switch

When the H₂O switch pressed while the "READY" indicator is on, the vehicle purges water.

When the switch is pressed again, purging stops.

System purging and purging complete messages are displayed in the multi-information display.

■ Water release function during cold weather

In the following cases, the fuel cell system automatic drainage may not operate. It may not be possible to start the fuel cell system due to the fuel cell stack, hydrogen pipes, etc., being frozen.

- When transporting or towing the

vehicle in frozen areas

- When the 12-volt battery terminals are disconnected and remain as such in frozen areas

Operate the water release function with the following procedure beforehand to prevent water from freezing in the system.

- 1 Turn the power switch to ON and press the H₂O switch.

Check that the “Active Purge Mode ON” message is displayed in the multi-information display.

- 2 While depressing the brake, press the power switch to start the fuel cell system.

Check that the “READY” indicator turns on.

- 3 Press the power switch to stop the fuel cell system.

The water release is automatically performed. (Longer than normal water purge)

■ Purging while parked

The water release function does not completely prevent purging while parked. The purge capacity while parked changes depending on outside temperature and operating conditions.

If the “READY” indicator continues to remain on after water release has been performed, water may be generated and purged when parked.

Headlight switch

The headlights can be operated manually or automatically.

Operating instructions

Operating the  switch turns on the lights as follows:

A U.S.A.

B Canada

- 1  The side marker, parking, tail, license plate, instrument panel lights, and daytime running lights (→P.238) turn on.
- 2  The headlights and all lights listed above (except daytime running lights) turn on.
- 3 **AUTO** The headlights, daytime running lights (→P.238) and

all the lights listed above turn on and off automatically.

- 4  (if equipped) The daytime running lights turn off.

■ **AUTO mode can be used when** The power switch is in ON.

■ **Daytime running light system**

- The daytime running lights illuminate using the same lights as the parking lights and illuminate brighter than the parking lights.
- To make your vehicle more visible to other drivers during daytime driving, the daytime running lights turn on automatically when all of the following conditions are met. (The daytime running lights are not designed for use at night.)
 - The fuel cell system is operating
 - The parking brake is released

• The headlight switch is in the  or **AUTO*** position

*: When the surroundings are bright

- The daytime running lights remain on after they illuminate, even if the parking brake is set again.
- For the U.S.A.: Daytime running lights can be turned off by operating the switch.
- Compared to turning on the headlights, the daytime running light system offers greater durability and consumes less electricity, so it can help improve fuel economy.

■ **Headlight control sensor**

The sensor may not function properly if an object is placed on the sensor, or anything that blocks the sensor is affixed to the windshield. Doing so interferes with the sensor detecting the level of ambient light and may cause the automatic headlight system to malfunction.

■ **Automatic light off system**

- When the headlights are on: The headlights and tail lights turn off 30 seconds after the driver's door is opened and closed if the power switch is turned to off. (The lights turn off immediately if  on the key is pressed after all the doors are closed.)
- When only the tail lights are on: The tail lights turn off automatically if the power switch is turned to ACC or off and the driver's door is opened.

To turn the lights on again, turn the power switch to ON, or turn the light switch to the **AUTO** or **DRL OFF** position

once and then back to  or .

■ **Light reminder buzzer**

A buzzer sounds when the power switch is turned off and the driver's door is opened while the lights are turned on.

■ **Automatic headlight leveling system**

The level of the headlights is automatically adjusted according to the number of passengers and the loading condition of the vehicle to ensure that the headlights do not interfere with other road users.

■ **Windshield wiper linked headlight illumination**

When driving during daytime with the headlight switch turned to **AUTO**, if the windshield wipers are used, the

headlights will turn on automatically after several seconds to help enhance the visibility of your vehicle.

■ **12-volt battery-saving function**

In order to prevent the 12-volt battery of the vehicle from discharging, if the headlights and/or tail lights are on when the power switch is turned off the 12-volt battery saving function will operate and automatically turn off all the lights after approximately 20 minutes. When the power switch is turned to ON, the 12-volt battery-saving function will be disabled.

When any of the following are performed, the 12-volt battery-saving function is canceled once and then reactivated. All the lights will turn off automatically 20 minutes after the 12-volt battery-saving function has been reactivated:

- When the headlight switch is operated
- When a door or the trunk is opened or closed

■ **Customization**

Some functions can be customized. (→P.674)

 **NOTICE**

■ **To prevent 12-volt battery discharge**

Do not leave the lights on longer than necessary when the fuel cell system is off.

Turning on the high beam headlights

- 1 With the headlights on, push the lever away from you to turn on the high beams.

Pull the lever toward you to the center position to turn the high beams off.

- 2 Pull the lever toward you and release it to flash the high beams once.

You can flash the high beams with the headlights on or off.

AHB (Automatic High Beam) (Vehicles without Toyota Teammate Advanced Drive)

The Automatic High Beam uses a front camera located on the upper portion of the windshield to detect the brightness of the lights of vehicles ahead, street-lights, etc., and automatically changes the head lights between the high beams and low beams.

WARNING

■ For safe use

Do not overly rely on the Automatic High Beam. Always drive safely, taking care to observe your surroundings and turning the high beams on or off manually if necessary.

■ To prevent unintentional operation of the Automatic High Beam System

When it is necessary to disable the system: →P.259

Using the Activating the Automatic High Beam system

- 1 Press the Automatic High Beam switch.

- 2 Turn the headlight switch to the AUTO or  position.

When the headlight switch lever is in the low beam position, the AHB system will be enabled and the AHB indicator will illuminate.

■ Automatic operating conditions of the high beams

- When all of the following conditions are met, the high beams will illuminate automatically:
 - The vehicle speed is approximately 21 mph (34 km/h) or more.
 - The area ahead of the vehicle is dark.
 - There are no vehicles ahead with lights on.
 - There are few streetlights or other lights on the road ahead.
- If any of the following conditions are met, the headlights will change to the low beams:
 - Vehicle speed drops below approximately 17 mph (27 km/h).
 - The area ahead of the vehicle is not dark.
 - There is a vehicle ahead with lights on.
 - There are many streetlights or other lights on the road ahead.

■ Front camera detection

- In the following situations, the high beams may not be automatically changed to the low beams:
 - When a vehicle cuts in front of your vehicle
 - When another vehicle crosses in front of the vehicle
 - When vehicles ahead are repeatedly detected and then hidden due to repeated curves, road dividers or roadside trees
 - When a vehicle ahead approaches from a far lane
 - When a vehicle ahead is far away
 - When a vehicle ahead has no lights
 - When the lights of a vehicle ahead are dim
 - When a vehicle ahead is reflecting strong light, such as own headlights
 - Situations in which the sensors may not operate properly: →P.264
- The headlights may change to the low beams if a vehicle ahead that is using fog lights without its headlights turned on is detected
- House lights, street lights, traffic signals, and illuminated billboards or signs may cause the high beams to change to the low beams, or the low beams to remain on.
- The following may change the timing at which the headlights change to the low beams:
 - The brightness of lights of vehicles ahead

- The movement and direction of vehicles ahead
- The distance between the vehicle and a vehicle ahead
- When a vehicle ahead only has lights illuminated on one side
- When a vehicle ahead is a two-wheeled vehicle
- The condition of the road (gradient, curve, condition of the road surface, etc.)
- The number of passengers and amount of luggage
- The headlights may change between the high beams and low beams unexpectedly.
- Bicycles and other small vehicles may not be detected.
- In the following situations, the system may not be able to correctly detect the brightness of the surroundings. This may cause the low beams to remain on or the high beams to flash or dazzle pedestrians or vehicles ahead. In such a case, it is necessary to manually change between the high beams and low beams.
- When there are lights similar to headlights or tail lights in the surrounding area
- When headlights or tail lights of vehicles ahead are turned off, dirty, changing color, or not aimed properly
- When the headlights are repeatedly changing between the high beams and low beams.
- When use of the high beams is inappropriate or when the high beams may be flashing or dazzling pedestrians or other drivers.
- When the vehicle is used in an area in which vehicles travel on the opposite side of the road of the country for which the vehicle was designed, for example using a vehicle designed for right-hand traffic in a left-hand traffic area, or vice versa
- When it is necessary to disable the system: →P.259
- Situations in which the sensors

may not operate properly: →P.264

■ Temporarily reducing front camera sensitivity (except for Canada)

The sensitivity of the front camera can be temporarily reduced.

- 1 Turn the power switch off with the following conditions met.
 - The headlight switch is in the AUTO or  position.
 - The headlight switch lever is in the low beam position.
 - The automatic High Beam switch is on.
- 2 Turn the power switch to ON.
- 3 Within 60 seconds after performing step 2, push the headlight switch lever to the high beam position then pull it to the original position quickly 10 times, then leave the lever in its original position.
- 4 If the sensitivity is changed, the Automatic High Beam indicator will blink 3 times.

Turning the high beams on/off manually

■ Changing to the high beams

Push the lever forward.

The AHB indicator will turn off and the high beam indicator will turn on.

Pull the lever to its original position to enable the Automatic High Beam system again.

■ **Changing to the low beams**

Press the Automatic High Beam switch.

The AHB indicator will turn off.

Press the switch to enable the Automatic High Beam system again.

inal position, the low beams will remain on for a certain amount of time. After this, the Automatic High Beam system will operate.

Temporarily changing to the low beams

It is recommended to switch to the low beams when use of the high beams is inappropriate or when the high beams may cause problems or distress to other drivers or pedestrians nearby.

Pull the lever rearward and then return it to its original position.

The high beams will illuminate while the lever is pulled, however, after the lever is returned to its orig-

AHB (Automatic High Beam) (Vehicles with Toyota Teammate Advanced Drive)

The Automatic High Beam uses a front camera located behind the upper portion of the windshield to assess the brightness of the lights of vehicles ahead, street-lights, etc., and automatically turns the high beams on or off as necessary.

⚠ WARNING

■ **Limitations of the Automatic High Beam**

Do not overly rely on the Automatic High Beam. Always drive safely, taking care to observe your surroundings and turning the high beams on or off manually if necessary.

■ **To prevent incorrect operation of the Automatic High Beam system**

Do not overload the vehicle.

Activating the Automatic High Beam

- 1 Press the Automatic High Beam switch.

- 2 Turn the headlight switch to the  or AUTO position.

When the headlight switch lever is in the low beam position, the AHB system will be enabled and the AHB indicator will illuminate.

■ **Conditions to turn the high beams on/off automatically**

- When all of the following conditions are met, the high beams will be turned on automatically (after approximately 1 second):
 - The vehicle speed is approximately 21 mph (34 km/h) or more.
 - The area ahead of the vehicle is dark.
 - There are no vehicles ahead with headlights or tail lights turned on.
 - There are few streetlights on the road ahead.

- If any of the following conditions are met, the high beams will turn off automatically:
 - The vehicle speed is below approximately 17 mph (27 km/h).
 - The area ahead of the vehicle is not dark.
 - Vehicles ahead have their headlights or tail lights turned on.
 - There are many streetlights on the road ahead.
- **Front camera detection information**
 - The high beams may not be automatically turned off in the following situations:
 - When a vehicle suddenly appears from around a curve
 - When the vehicle is cut in front of by another vehicle
 - When vehicles ahead cannot be detected due to repeated curves, road dividers or roadside trees
 - When vehicles ahead appear in a faraway lane on a wide road
 - When the lights of vehicles ahead are not on
 - The high beams may be turned off if a vehicle ahead that is using fog lights without its headlights turned on is detected.
 - House lights, street lights, traffic signals, and illuminated billboards or signs and other reflective objects may cause the high beams to change to the low beams, or the low beams to remain on.
 - The following factors may affect the amount of time taken for the high beams to turn on or off:
 - The brightness of the headlights, fog lights, and tail lights of vehicles ahead
 - The movement and direction of vehicles ahead
 - When a vehicle ahead only has operational lights on one side
 - When a vehicle ahead is a two-wheeled vehicle
 - The condition of the road (gradient, curve, condition of the road surface, etc.)
- The number of passengers and amount of luggage in the vehicle
- The high beams may turn on or off unexpectedly.
- Bicycles or similar vehicles may not be detected.
- In the following situations the system may not be able to correctly detect the surrounding brightness level. This may cause the low beams to remain on or the high beams to flash or dazzle pedestrians or vehicles ahead. In such a case, it is necessary to manually switch between the high and low beams.
 - When driving in inclement weather (heavy rain, snow, fog, sandstorms, etc.)
 - When the windshield is obscured by fog, mist, ice, dirt, etc.
 - When the windshield is cracked or damaged
 - When the front camera is deformed or dirty
 - When the temperature of the front camera is extremely high
 - When the surrounding brightness level is equal to that of headlights, tail lights or fog lights
 - When headlights or tail lights of vehicles ahead are turned off, dirty, changing color, or not aimed properly
 - When the vehicle is hit by water, snow, dust, etc., from a preceding vehicle
 - When driving through an area of intermittently changing brightness and darkness
 - When frequently and repeatedly driving ascending/descending roads, or roads with rough, bumpy or uneven surfaces (such as stone-paved roads, gravel roads, etc.)
 - When frequently and repeatedly taking curves or driving on a winding road
 - When there is a highly reflective object ahead of the vehicle, such as a sign or mirror

- When the back of a preceding vehicle is highly reflective, such as a container on a truck
- When the vehicle's headlights are damaged or dirty, or are not aimed properly
- When the vehicle is listing or titling due to a flat tire, a trailer being towed, etc.
- When the headlights are changed between the high beams and low beams repeatedly in an abnormal manner
- When the driver believes that the high beams may be flashing or dazzling pedestrians or other drivers

■ **Temporarily lowering sensor sensitivity**

The sensitivity of the sensor can be temporarily lowered.

- 1 Turn the power switch off while the following conditions are met.

- The headlight switch is in  or

AUTO.

- The headlight switch lever is in low beam position.
 - Automatic High Beam switch is on.
- 2 Turn the power switch to ON.
 - 3 Within 60 seconds after step 2, repeat pushing the headlight switch lever to the high beam position then pulling it to the original position quickly 10 times, then leave the lever in the original position.
 - 4 If the sensitivity is changed, the AHB indicator is turn on and off 3 times.

Turning the high beams on/off manually

■ **Switching to the high beams**

Push the lever away from you.

The AHB indicator will turn off and the high beam indicator will turn on.

Pull the lever to its original position to activate the Automatic High Beam system.

■ **Switching to the low beams**

Press the Automatic High Beam switch.

The AHB indicator will turn off.

Press the switch to activate the Automatic High Beam system again.

■ **Temporarily switching to the low beams**

Pull the lever toward you and

then return it to its original position.

The high beams are on while the lever is pulled toward you. However, after the lever is returned to its original position, the low beams remain on for a certain period of time. Afterwards, the Automatic High Beam system will be activated again.

■ **Temporarily switching to the low beams**

It is recommended to switch to the low beams when the high beam may cause problems or distress to other drivers or pedestrians nearby.

Windshield wipers and washer

Operating the lever can switch between automatic operation and manual operation, or can use the washer.

NOTICE

■ **When the windshield is dry**

Do not use the wipers, as they may damage the windshield.

Operating the wiper lever

Operate the lever operates the wipers or washer as follows:

- ▶ Intermittent windshield wipers
- When intermittent windshield wiper operation is selected, the wiper interval can be also adjusted.

1 OFF

5

Driving

Off

2 INT Intermittent operation

3 LO Low speed wiper operation

4 HI High speed wiper operation

5 MIST Temporary operation

Wiper intervals can be adjusted when intermittent operation is selected.

6 Increases the intermittent windshield wiper frequency

7 Decreases the intermittent windshield wiper frequency

8  Windshield cleaning washer/wiper dual operation
Pulling the lever operates the wip-

ers and washer.

(After operating several times, the wipers operate once more time after a short delay to prevent dripping. However, the dripping prevention does not operate while the vehicle is moving.)

► Rain-sensing windshield wipers

When AUTO is selected, the wipers will operate automatically when the sensor detects falling rain. The system automatically adjusts wiper timing in accordance with rain volume and vehicle speed.

1 OFF (U.S.A.) or ○ (Canada)
Off

2 AUTO Rain-sensing wiper operation

The wipers will operate automatically when the sensor detects falling rain. The system automatically adjusts wiper timing in accordance with rain volume and vehicle speed.

- 3 LO (U.S.A.) or ▼ (Canada)
Low speed wiper operation
- 4 HI (U.S.A.) or ▼ (Canada)
High speed wiper operation
- 5 MIST (U.S.A.) or △ (Canada)
Temporary operation

When AUTO is selected, the sensor sensitivity can be adjusted by turning the switch ring.

- 6 Increases the sensitivity
- 7 Decreases the sensitivity

- 8  Washer/wiper dual operation

Pulling the lever operates the wipers and washer.
(After operating several times, the wipers operate once more time after a short delay to prevent dripping. However, the dripping preven-

tion does not operate while the vehicle is moving.)

- 9  * Rear camera washer operation

Pushing the lever operates the rear camera washer and cleans the rear camera and the camera for the Digital Rear-view Mirror.

*: Vehicles with Digital Rear-view Mirror

■ **The windshield wiper and washer can be operated when**

The power switch is in ON.

■ **Effects of vehicle speed on wiper operation (vehicles with rain-sensing windshield wipers)**

Even when the wipers are not in AUTO mode, vehicle speed affects the time until the drip prevention wiper sweep occurs.

With low speed windshield wiper operation selected, wiper operation will be switched from low speed to intermittent wiper operation only when the vehicle is stationary. (However, when the sensor sensitivity is adjusted to the highest level, the mode cannot be switched.)

■ **Raindrop sensor (vehicles with rain-sensing windshield wipers)**

- The raindrop sensor judges the amount of raindrops. An optical sensor is adopted. It may not operate properly when sunlight from the rising or setting of the sun intermittently strikes the windshield, or if bugs, etc., are present on the windshield.

- If the wiper is turned to AUTO mode while the power switch is in ON, the wipers will operate once to show that AUTO mode is activated.
- If the temperature of the raindrop sensor is 185°F (85°C) or higher, or 5°F (-15°C) or lower, automatic operation may not occur. In this case, operate the wipers in any mode other than AUTO mode.

■ **If no windshield washer fluid sprays**

Check that the washer nozzles are not blocked if there is washer fluid in the windshield washer fluid reservoir.

■ **Front door opening linked windshield wiper stop function (vehicles with rain-sensing windshield wipers)**

When AUTO is selected and the windshield wipers are operating, if a front door is opened while the vehicle is stopped and the P shift position is selected, operation of the windshield wipers will be stopped to prevent anyone near the vehicle from being sprayed by water from the wipers. When the front door is closed, wiper operation will resume.

■ **When stopping fuel cell system in an emergency while driving**

If the windshield wipers are operating when fuel cell system is stopped, the windshield wipers will operate in high speed operation. After the vehicle is stopped, operation will return to normal when the power switch is turned to ON, or operation will stop when the driver's door is opened.

■ **Using the voice control system (if equipped)**

The following operations can be performed using the voice control system:

- Operating the windshield wipers only once
- Operating the windshield cleaning washer (it can be performed only when the vehicle is stopped) For details regarding the voice control system, refer to "MULTIMEDIA OWNER'S MANUAL".

⚠ WARNING

■ **Caution regarding the use of windshield wipers in AUTO mode (vehicles with rain-sensing windshield wipers)**

The windshield wipers may operate unexpectedly if the sensor is touched or the windshield is subject to vibration in AUTO mode. Take care that your fingers or anything else do not become caught in the windshield wipers.

■ **Caution regarding the use of washer fluid**

When it is cold, do not use the washer fluid until the windshield becomes warm. The fluid may freeze on the windshield and cause low visibility. This may lead to an accident, resulting in death or serious injury.

 **NOTICE**

■ **When there is no washer fluid spray from the nozzle**
 Damage to the washer fluid pump may be caused if the lever is pulled toward you and held continually.

■ **When a nozzle becomes blocked**
 In this case, contact your Toyota dealer.
 Do not try to clear it with a pin or other object. The nozzle will be damaged.

■ **Raindrop sensor (vehicles with rain-sensing windshield wipers)**
 If the windshield is coated with water repellent coating, the raindrop sensor may not properly detect raindrops, preventing automatic mode from operating properly.

■ **To prevent 12-volt battery discharge**
 Do not leave the wipers on longer than necessary when the fuel cell system is off.

Changing the windshield wiper rest position/Lifting the windshield wipers

When the windshield wipers are not being used, they retract to below the hood. To enable the windshield wipers to be lifted when parking in cold conditions or when replacing a windshield wiper insert, change the rest position of the windshield wipers to the service position using the wiper lever.

■ **Raising the wipers to the service position**

Within approximately 45 seconds of turning the power switch off, move the wiper lever to the MIST (U.S.A.) or Δ (Canada) position and hold it for approximately 2 seconds or more.
 The wipers will move to the service position.

■ **Lifting the windshield wipers**

While holding the hook portion **A** of the wiper arm, lift the windshield wiper from the windshield.

● Do not operate the wiper lever when the windshield wipers are lifted. Otherwise, the windshield wipers may contact the hood, possibly resulting in damage to the windshield wipers and/or hood.

■ **Lowering the windshield wipers to the retracted position**

With the windshield wipers placed on the windshield, turn the power switch to ON and then move the wiper lever to an operating position. When the wiper switch is turned off, the windshield wipers will stop at the retracted position. Even if the wipers deviate while the power switch is off, the wipers will return to the normal position.

⚠ NOTICE

■ **When lifting the windshield wipers**

- Do not lift the windshield wipers when they are in the retracted position below the hood. Otherwise, they may contact the hood, possibly resulting in damage to a windshield wiper and/or the hood.
- Do not lift a windshield wiper by the wiper blade. Otherwise, the wiper blade may be deformed.

Opening the fuel door

- Fuel with compressed hydrogen gas only at hydrogen stations.
- Fuel at hydrogen stations conforming with the Society of Automotive Engineers (SAE) J2601 fueling protocol or laws that may supersede such SAE protocols.
- Refer to the Mirai Station Finder Application in Connected services, <https://www.toyota.com/connected-services/> (for U.S. owners) or <https://www.toyota.ca/toyota/en/about/connected-services> (for Canadian owners), or call 1-800-331-4331 (for U.S. owners) or 1-888-869-6828 (for Canadian owners).
- Observe any notices or instructions shown at hydrogen stations.
- The filling time and amount of fuel may depend on outside temperature and the equipment at that hydrogen station.

- Vehicles with expired hydrogen tanks must not be used. Check P.95 to learn how and when to check the expiration. Consult your Toyota dealer.

Before filling

- Close all the doors and windows.
- Set the parking brake.
- Shift the shift position to P.
- Turn the power switch off.
- Turn off the headlights.

Fuel types

→P.659

Notes on fueling

- Fueling will not be possible if the pressure inside the vehicle's hydrogen tanks is higher than the supply pressure of the hydrogen station. If the hydrogen tanks are more than half full, the vehicle will be unable to fuel at a H35 dispenser. A hydrogen station with a H70 dispenser (supply pressure of 10150 psi) [70 MPa, 714 kgf/cm², 700 bar] is necessary to completely fill hydrogen tanks.
- If the fueling cannot be completed due to trouble with the station equipment, call the number indicated on the equipment.

**WARNING****When filling**

Observe the following precautions while fueling the vehicle. Failure to do so may result in death or serious injury.

**WARNING**

- Turn the power switch off before fueling.
- Ensure the hydrogen gas nozzle is locked onto the vehicle receptacle before filling. This can be done by pulling on the hydrogen gas nozzle to check that it cannot be pulled off. Failure to do so may result in injury or damage to the hydrogen gas nozzle or vehicle.
- Do not smoke while fueling.
- Because the fuel is cold, the hydrogen gas nozzle and vehicle receptacle surface will become cold, and frost may develop. After fueling is completed, remove the hydrogen gas nozzle by the plastic handle only. Do not touch any other parts of the hydrogen gas nozzle or vehicle receptacle with bare hands immediately after fueling, as frostbite may occur.
- Be sure to use hydrogen gas nozzles at 350 bar/700 bar for passenger vehicles. Do not use hydrogen gas nozzles designed for commercial vehicles. Check the instructions at hydrogen station or ask the station operator for assistance.
- Only fuel the vehicle at hydrogen stations designed for passenger vehicles. Do not fuel the vehicle at hydrogen stations designed for forklifts, buses, or trucks. Ask the station operator for assistance.

**NOTICE****When filling**

- Fuel only with compressed hydrogen gas at stations compliant with the Society of Automotive Engineers (SAE) J2601 fueling protocol or laws that may supersede such SAE protocols. If improper fuels are used, the fuel cell stack will be damaged.
- Do not swing or drop the hydrogen gas nozzle, or subject it to a large amount of force. Doing so may cause damage.
- If the hydrogen gas nozzle cannot be removed after fueling, it may be frozen to the vehicle receptacle. Wait for the hydrogen gas nozzle to thaw before attempting to remove. Do not pull or rotate the hydrogen gas nozzle forcibly. Failure to follow these precautions may cause damage.
- Be sure to replace the cap after filling. If foreign material gets in the vehicle receptacle, it may cause damage.
- Do not put anything sharp, such as a screwdriver, blade, or any foreign object into the opening of the vehicle receptacle. If the vehicle receptacle is damaged, hydrogen gas may leak during fueling.
- If you notice anything unusual about the vehicle receptacle, please notify your Toyota dealer.
- If you notice anything unusual with the hydrogen dispenser or hydrogen gas nozzle, please notify the hydrogen station operator. Contact information is usually displayed on the dispenser.

 **NOTICE**

- Do not put anti-freeze in the fuel inlet opening. If foreign materials enter the fuel inlet opening, it may lead to damage.
- Do not use a hydrogen gas fueling nozzle that has water droplets attached to it, when fueling. The attached water droplets will freeze and the hydrogen gas fueling nozzle may no be able to be removed.

Opening the fuel door

1 Press the opener switch.

If the “READY” indicator is on or the power switch is in ON, the fuel door will not be unlocked.

2 Remove the cap and attach it to the holder.

■ If “Stop in a Safe Place Turn Power OFF Open Hydrogen Filler Door” is displayed on the multi-information display

Stop the vehicle in a safe place and press the fuel door opener switch once more with the following procedure:

- 1** Shift the shift position to P.
- 2** Turn the power switch off.
- 3** Press the fuel door opener switch.

■ Sounds during filling

When fueling with compressed hydrogen gas, noises from gas flowing through the hydrogen gas nozzle and hydrogen tank valves can sometimes be heard. (→P.89)

Closing the fuel door

1 Replace the cap.

2 Close the fuel door.

5

Driving

■ Error operation prevention function

When the fuel door is open, the fuel cell system will not start. When the "READY" indicator is on, the fuel door will not open.

■ If "Open Filler Door Detected Stop in a Safe Place Close Hydrogen Filler Door" is displayed on the multi-information display

The fuel door is open. Stop the vehicle in a safe place and close the fuel door.

■ If "Open Filler Door Detected Close Hydrogen Filler Door Restart Vehicle" is displayed on the multi-information display

The fuel door is open and the fuel cell system cannot be started. Shift the shift position to P and, turn the power switch off, then:

- 1 Check whether the cap has been reinstalled.
- 2 Close the fuel door.

If the warning message on the multi-information display turns off at this time, there is no malfunction. However, if the display continues to show, the sensor may be damaged. Have the vehicle inspected by your Toyota dealer.

It can be started 1 time at intervals of repeating the starting operations 5 times (With the brake pedal depress, press the power switch operations 9 times within the interval of 2 seconds). Operate the vehicle after checking to be sure that the hydrogen fueling nozzle is not connected to the vehicle.

Toyota Safety Sense 3.0 software update*

*: Vehicles with Toyota Teammate Advanced Drive, refer to “Toyota Teammate Advanced Drive OWNER’S MANUAL”.

It is necessary to enter a connected services contract, provided by Toyota, to use these functions. For details, contact your Toyota dealer.

⚠ WARNING**■ For safe use**

When the Toyota Safety Sense 3.0 software is updated, the operating methods of functions may change. Using this system without knowing the correct operating methods may lead to an accident resulting in death or serious injury.

- Make sure to read the Digital Owner’s Manual which corresponds to the software version of the system, available at the Owner’s Manual website, before using this system.

Content of the Toyota Safety Sense 3.0 Owner’s Manual

This Owner’s Manual contains information for Ver. 2. For the latest information about the controls, use, warnings/precautions, etc. of each function of Toyota Safety Sense 3.0, refer to the Digital Owner’s Manual at the Owner’s Manual website.

If the software of this system has been updated after initial purchase of the vehicle, before using this system, be sure to read the Owner’s Manual which corresponds to the software version of the system.

■ Precautions for use

- Be aware that some functions may temporarily be disabled if a legal or safety related issue occurs.
- If a connected services contract has not been entered or has expired, software updates will not be able to be performed wirelessly.

Checking your vehicle’s Toyota Safety Sense 3.0 version

If the software of this system has been updated after initial purchase of the vehicle, to access the appropriate Owner’s Manual, it is necessary to check the software version of the system and then visit the Owner’s Manual website.

■ Checking the version using ToyotaAPP

The software version of the system can be checked using ToyotaAPP.

■ **Using your vehicle's Toyota Safety Sense 3.0 version**

- 1 Access the following URL using a computer or smart-phone:

- ▶ For U.S.A. owners

<https://www.toyota.com/owners/resources/warranty-owners-manuals/maual?om=om62121u.mirai.2024.2312.fcev.vh>

- ▶ For Canadian owners

<https://www.toyota.ca/toyota/owners/manual?om=om62121u.mirai.2024.2312.fcev.vh>

- 2 Select the file which includes the previously checked system version.

Updating the software

If a software update is available, a notification will be displayed by ToyotaAPP. Follow the instructions displayed on the screen.

■ **Software update precautions**

- After a software update has been performed, it will not be possible to revert to a previous version.
- Depending on the communication environment and the content of an update, a software update may take several hours. Although an update will be suspended when the power switch is turned off, it will resume when the power switch is changed back to ON.
- Toyota Safety Sense 3.0 can still be used while a software update is being performed.

■ **What can be checked using the ToyotaAPP**

The following items can be checked or performed.

- Software version, update details, precautions, use methods, etc.
- Software update

Toyota Safety Sense 3.0*

*: Vehicles with Toyota Teammate Advanced Drive, refer to “Toyota Teammate Advanced Drive OWNER’S MANUAL”.

The Toyota Safety Sense 3.0 consists of the driving assist systems and contributes to a safe and comfortable driving experience:

WARNING

■ Toyota Safety Sense 3.0

The Toyota Safety Sense 3.0 operates under the assumption that the driver will drive safely, and is designed to help reduce the impact to the occupants in a collision and assist the driver under normal driving conditions. As there is a limit to the degree of recognition accuracy and control performance that this system can provide, do not overly rely on this system. The driver is solely responsible for paying attention to the vehicle’s surroundings and driving safely.

■ For safe use

- Do not overly rely on this system. The driver is solely responsible for paying attention to the vehicle’s surroundings and driving safely. This system may not operate in all situations and provided assistance is limited. Over-reliance on this system to drive the vehicle safely may lead to an accident resulting in death or serious injury.
- Do not attempt to test the operation of the system, as it may not operate properly, possibly leading to an accident.

- If attention is necessary while performing driving operations or a system malfunction occurs, a warning message or warning buzzer will be operated. If a warning message is displayed on the display, follow the instructions displayed.

- Depending on external noise, the volume of the audio system, etc. it may be difficult to hear the warning buzzer. Also, depending on the road conditions, it may be difficult to recognize the operation of the system.

■ When it is necessary to disable the system

In the following situations, make sure to disable the system.

Failure to do so may lead to the system not operating properly, possibly leading to an accident resulting in death or serious injury.

- When the vehicle is tilted due to being overloaded or having a flat tire
- When driving at extremely high speeds
- When towing another vehicle
- When the vehicle is being transported by a truck, ship, train, etc.
- When the vehicle is raised on a lift and the tires are allowed to rotate freely
- When inspecting the vehicle using a drum tester such as a chassis dynamometer or speedometer tester, or when using an on vehicle wheel balancer
- When the vehicle is driven in a sporty manner or off-road
- When using an automatic car wash

⚠ WARNING

- When a sensor is misaligned or deformed due to a strong impact being applied to the sensor or the area around the sensor
- When accessories which obstruct a sensor or light are temporarily installed to the vehicle
- When a compact spare tire or tire chains are installed to the vehicle or an emergency tire puncture repair kit has been used
- When the tires are excessively worn or the inflation pressure of the tires is low
- When tires other than the manufacturer specified size are installed
- When the vehicle cannot be driven stably, due to a collision, malfunction, etc.

Sensors used by Toyota Safety Sense 3.0

Various sensors are used to obtain the necessary information for system operation.

■ **Sensors which detect the surrounding conditions**

► Front

- A** Front radar sensor
- B** Front camera
- C** Front side radar sensors

► Rear (rear side radar sensors)

■ **Sensors which detect the driver condition**

- A** Driver monitor camera

! WARNING

■ **To prevent malfunction of the radar sensors**

Observe the following precautions. Failure to do so may lead to a radar sensor not operating properly, possibly leading to an accident resulting in death or serious injury.

- Keep the radar sensors and radar sensor covers clean at all times.

Clean the front of a radar sensor or the front or back of a radar sensor cover if it is dirty or covered with water droplets, snow, etc.

When cleaning the radar sensor and radar sensor cover, use a soft cloth to remove dirt so as to not damage them.

- A** Radar sensor
- B** Radar sensor cover

- Keep the surrounding area of the front side radar sensors on the front bumper clean at all times.

⚠ WARNING

- Do not attach accessories, stickers (including transparent stickers), aluminum tape, etc. to a radar sensor or radar sensor cover and their surrounding area.
- Do not subject a radar sensor or its surrounding area to impact. If a radar sensor, the front grille, or front bumper has been subjected to a impact, have the vehicle inspected by your Toyota dealer.
- Do not disassemble the radar sensors.
- Do not modify or paint the radar sensors or radar sensor cover, or replace them with anything other than Toyota genuine parts.
- In the following situations, recalibration of the radar sensors will be necessary. For details, contact by your Toyota dealer.
 - When a radar sensor is removed and installed, or replaced
 - When the front bumper or the front grille has been replaced

■ To prevent malfunction of the front camera

Observe the following precautions. Failure to do so may lead to the front camera not operating properly, possibly leading to an accident resulting in death or serious injury.

- Always keep the windshield clean.
- If the windshield is dirty or covered with an oily film, water droplets, snow, etc., clean the windshield.

- Even if a glass coating agent is applied to the windshield, it will still be necessary to use the windshield wipers to remove water droplets, etc. from the area of the windshield in front of the front camera.
- If the inner side of the windshield where the front camera is installed is dirty, contact your Toyota dealer
- Do not attach stickers (including transparent stickers) or other items to the area of the windshield in front of the front camera (shaded area in the illustration).

- A** Approximately 1.6 in. (4 cm)
- B** Approximately 1.6 in. (4 cm)

- If the part of the windshield in front of the front camera is fogged up or covered with condensation or ice, use the windshield defogger to remove the fog, condensation, or ice.
- If water droplets cannot be properly removed from the area of the windshield in front of the front camera by the windshield wipers, replace the wiper insert or wiper blade.
- Do not attach window tint to the windshield.

⚠ WARNING

- Replace the windshield if it is damaged or cracked. If the windshield has been replaced, recalibration of the front camera will be necessary. For details, contact your Toyota dealer.
- Do not allow liquids to contact the front camera.
- Do not allow bright lights to shine into the front camera.
- Do not damage the lens of the front camera or allow it to become dirty. When cleaning the inside of the windshield, do not allow glass cleaner to contact the lens of the front camera. Do not touch the lens of the front camera. If the lens of the front camera is dirty or damaged, contact your Toyota dealer.
- Do not subject the front camera to a strong impact.
- Do not change the position or orientation of the front camera or remove it.
- Do not disassemble the front camera.
- Do not modify any parts around the front camera, such as the inside rear view mirror or ceiling.
- Do not attach accessories which may obstruct the front camera to the hood, front grille, or front bumper. For details, contact your Toyota dealer.
- If a surfboard or other long object is to be mounted on the roof, make sure that it will not obstruct the front camera.

- Do not modify or change the headlights and other lights.

■ Front camera installation area on the windshield

If the system determines that the windshield may be fogged up, it will automatically operate the heater to defog the part of the windshield around the front camera. When cleaning, etc., be careful not to touch the area around the front camera until the windshield has cooled sufficiently, as touching it may cause burns.

■ Precautions for the driver monitor camera

Observe the following precautions.

Failure to do so may lead to malfunction of the driver monitor camera and the systems not operating properly, possibly leading to an accident resulting in death or serious injury.

- Do not subject the driver monitor camera or its surrounding area to strong impact. If subjected to a strong impact, the driver monitor camera may move out of alignment and the driver may no longer be detected correctly. In this case, have the vehicle inspected by Toyota dealer.
- Do not disassemble or modify the driver monitor camera.
- Do not attach accessories, stickers (including transparent stickers), etc. to the driver monitor camera or its surrounding area.
- Do not allow the driver monitor camera or its surrounding area to get wet.

⚠ WARNING

- Do not cover the driver monitor camera or place anything in front of it.
- Keep the lens of the driver monitor camera free from damage.
- Do not touch the lens of the driver monitor camera or allow it to become dirty.

When there is dirt or fingerprints on the camera lens, clean it with a dry, soft cloth so as to not mark or damage it.

- When cleaning the lens, do not use detergents or organic solvents that may damage plastic.

■ Situations in which the sensors may not operate properly

- When the height or inclination of the vehicle has been changed due to modifications
- When the windshield is dirty, fogged up, cracked or damaged
- When the ambient temperature is high or low
- When mud, water, snow, dead insects, foreign matter, etc., is attached to the front of the sensor
- When in inclement weather such as heavy rain, fog, snow, or a sandstorm
- When water, snow, dust, etc. is thrown up in front of the vehicle, or when driving through mist or smoke
- When the headlights are not illuminated while driving in the dark, such as at night or when in a tunnel
- When the lens of a headlight is dirty and illumination is weak
- When the headlights are misaligned

- When a headlight is malfunctioning
- When a the headlights of another vehicle, sunlight, or reflected light shines directly into the front camera
- When the brightness of the surrounding area changes suddenly
- When driving near a TV tower, broadcasting station, electric power plant, radar equipped vehicles, etc., or other location where strong radio waves or electrical noise may be present
- When a wiper blade is blocking the front camera
- When in a location or near objects which strongly reflect radio waves, such as the following:
 - Tunnels
 - Truss bridges
 - Gravel roads
 - Rutted, snow-covered roads
 - Walls
 - Large trucks
 - Manhole covers
 - Guardrail
 - Metal plates
- When near a step or protrusion
- When a detectable vehicle is narrow, such as a small mobility vehicle
- When a detectable vehicle has a small front or rear end, such as an unloaded truck
- When a detectable vehicle has a low front or rear end, such as a low bed trailer

- When a detectable vehicle has extremely high ground clearance

- When a detectable vehicle is carrying a load which protrudes from its cargo area
- When a detectable vehicle has little exposed metal, such as a vehicle which is partially covered with cloth, etc.
- When a detectable vehicle is irregularly shaped, such as a tractor, sidecar, etc.
- When the distance between the vehicle and a detectable vehicle has become extremely short
- When a detectable vehicle is at an angle
- When snow, mud, etc. is attached to a detectable vehicle
- When driving on the following kinds of roads:
 - Roads with sharp curves or winding roads
 - Roads with changes in grade, such as sudden inclines or declines
 - Roads which is sloped to the left or right
 - Roads with deep ruts
 - Roads which are rough and unmaintained
 - Roads which frequently undulate or are bumpy
- When the steering wheel is being operated frequently or suddenly
- When the vehicle is not in a constant position within a lane
- When parts related to this system, the brakes, etc. are cold or extremely hot, wet, etc.
- When the wheels are misaligned
- When driving on slick road sur-

faces, such as when it is covered with ice, snow, gravel, etc.

- When the course of the vehicle differs from the shape of a curve
- When the vehicle speed is excessively high when entering a curve
- When entering/exiting a parking lot, garage, car elevator, etc.
- When driving in a parking lot
- When driving through an area where there are obstructions which may contact your vehicle, such as tall grass, tree branches, a curtain, etc.
- When driving in strong wind

■ **Situations in which the lane may not be detected**

- When the lane is extremely wide or narrow
- Immediately after changing lanes or passing through an intersection
- When driving in a temporary lane or lane regulated by construction
- When there are structures, patterns, shadows which are similar to lane lines in the surrounding
- When there are multiple white lines for a lane line
- When the lane lines are not clear or driving on a wet road surface
- When a lane line is on a curb
- When driving on a bright, reflective road surface, such as concrete

■ **Situations in which some or all of the functions of the system cannot operate**

- When a malfunction is detected in this system or a related system, such as the brakes, steering, etc.
- When the VSC, TRAC, or other safety related system is operating
- When the VSC, TRAC, or other safety related system is off

■ Changes in brake operation sound and pedal response

- When the brakes have been operated, brake operation sounds may be heard and the brake pedal response may change, but this does not indicate a malfunction.
- When the system is operating, the brake pedal may feel stiffer than expected or sink. In either situation the brake pedal can be depressed further. Further depress the brake pedal as necessary.

■ Situations in which the driver monitor may not operate properly

In situations such as the following, the driver monitor camera may not be able to detect the driver's face, and the function may not operate properly.

- When the inside of the vehicle is hot, such as after the vehicle has been parked in the sun
- When a very bright light, such as the sun or the headlights of following vehicle, shines onto the driver monitor camera
- When the brightness inside the vehicle changes frequently due to the shadows of surrounding structures, etc.
- When a very bright light, such as the sun or the headlights of an oncoming vehicle, is shining onto the driver's face
- When light, either inside or outside of the vehicle, is being reflected from the lenses of eyeglasses or sunglasses
- When there are multiple faces in the detection range of the driver monitor camera, such as when a front or rear passenger is leaning toward the driver's seat
- When the driver's face is outside of the detection range of the driver monitor camera, such as when
 - leaned forward or when their head is outside of the window
- When the driver monitor camera is being blocked by the steering wheel, a hand holding the steering wheel, an arm, etc.
- When the driver is wearing a hat
- When the driver is wearing an eyepatch
- When the driver is wearing eyeglasses or sunglasses that do not easily transmit infrared rays
- When the driver is wearing contact lenses
- When the driver is wearing a face mask
- When the driver is laughing or their eyes are only slightly open
- When the driver's eyes, nose, mouth, or shape of their face is blocked
- When the driver is wearing makeup which makes it difficult to detect their eyes, nose, mouth, or shape of their face
- When the driver's eyes are blocked by the frame of eyeglasses, sunglasses, hair, etc.
- When there is a device inside the vehicle that radiates near infrared rays, such as a non-genuine driver monitoring system.

■ Certification

→P.747

Driver monitor*

*: Vehicles with Toyota Teammate Advanced Drive, refer to “Toyota Teammate Advanced Drive OWNER’S MANUAL”.

Basic functions

During controlled driving, the driver monitor camera detects the position and direction the driver is facing, and whether their eyes are opened or closed. Through this, the system determines if the driver is checking their surroundings and if the driver can perform driving operations.

In order to operate properly, the driver monitor camera requires an unobstructed view of the driver’s face.

If the steering column or seat position is either too high or too low, or if any other condition is present that obstructs the driver monitor camera’s view of the driver’s face, some driving support systems may not operate properly, or a warning message may be displayed.

■ Warning function

In situations such as the following, a buzzer will sound and a message will be displayed to warn the driver.

When the system determines that the driver is not paying attention to the road or their eyes are closed.

When the driver’s face cannot be detected or the system determines that the driver has poor driving posture.

When the seated position of the driver is such that the upper or lower part of the meter is not visible, the driver’s entire face may not be recognized by the driver monitor camera.

To mitigate the appearance of this warning, adjust the steering wheel and seat position so the driver can see the entire meter.

■ Face identification

The driver monitor is used as a device to identify faces in order to identify an individual.

For information about how to use the face identification func-

tion, priorities among other devices of individual identification, and linked vehicle settings, see “My Settings”. (→P.203)

⚠ WARNING

■ For safe use

- The driver monitor is not designed to prevent the driver from driving carelessly or having a poor driving posture. Pay careful attention to the surrounding conditions in order to ensure safe driving.
- The driver monitor cannot reduce drowsiness. If you feel unable to concentrate or drowsy, take a break and sleep as necessary in order to ensure safe driving.

■ Warning function

These functions may not operate when the vehicle speed is low.

■ Face identification

Face identification starts when the door is opened then closed.

In face identification, facial traits are digitized and stored in a built-in computer, to be used for identification in My Settings.

- Face image or video are not stored. Voice is not stored either.
- Digitized face information is not used for any purpose other than identification in My Settings. Additionally, face information cannot be decoded and will not be disclosed or provided to a third party.
- Face information can be deleted by yourself.
- For the handling of face information, please consent to the following before using it:
 - Face identification does not guarantee a complete identity authentication, collation, or identification.

- When face information registration fails frequently or face identification fails frequently, the driver cameras should be cleaned or face information should be registered again.
- Face information stored in the vehicle computer cannot be decoded or moved to another media. Therefore, it is necessary to register face information again once it is deleted or relevant parts are replaced.
- Once deleted, face information cannot be restored. It is necessary to register face information again.

■ Situations where face identification may not be performed correctly

This system is designed for use to identify facial traits. In the following situations, face information may not be able to be registered or identified correctly:

- When a part of the driver’s face (eyebrows, eyes, nose, or mouth) is not visible
- When the driver is wearing glasses/sun glasses, a face mask, muffler, etc.
- When the driver is not facing front
- When part of driver’s face is covered with hair, beard, a hand, clothes, jewelry, etc.
- When the driver is closing eyes
- When a non-registered driver is a twin, etc. with a registered driver, whose face looks quite alike with each other

■ Situations in which the driver monitor may not operate properly

→P.266

Changing Driver monitor settings

The settings of Driver monitor can be changed through customize settings. (→P.674)

PCS (Pre-Collision System)*

*: Vehicles with Toyota Teammate Advanced Drive, refer to “Toyota Teammate Advanced Drive OWNER’S MANUAL”.

The pre-collision system uses sensors to detect objects (→P.270) in the path of the vehicle. When the system determines that the possibility of a frontal collision with a detectable object is high, a warning operates to urge the driver to take evasive action and the potential brake pressure is increased to help the driver avoid the collision. If the system determines that the possibility of a collision is extremely high, the brakes are automatically applied to help avoid the collision or help reduce the impact of the collision.

The pre-collision system can be disabled/enabled and the warning timing can be changed. (→P.280)

⚠ WARNING

■ **For safe use**

● Driving safely is solely the responsibility of the driver. Pay careful attention to the surrounding conditions in order to ensure safe driving. Never use the pre-collision system in place of normal braking operations. This system cannot help avoid or reduce the impact of a collision in every situation. Over-reliance on this system to drive the vehicle safely may lead to an accident resulting in death or serious injury.

● Although the pre-collision system is designed to help avoid or help reduce the impact of a collision, its effectiveness may change according to various conditions. Therefore, it may not always be able to achieve the same level of performance. Read the following items carefully. Do not overly rely on this system and always drive carefully.

• For safe use: →P.259

■ **When to disable the pre-collision system**

When it is necessary to disable the system: →P.259

Detectable objects

The system can detect the following as detectable objects. (Detectable objects differ depending on the function.)

- Vehicles
- Bicycles *
- Pedestrians
- Motorcycles *

- Walls

*: Detected as a detectable object only when being ridden.

System functions

■ **Pre-collision warning**

When the system determines that the possibility of a collision is high, a buzzer will sound and an icon and warning message will be displayed on the multi-information display to urge the driver to take evasive action.

If the detectable object is a vehicle, moderate braking will be performed with the warning.

A “Pre-Collision System”

If the system determines that the accelerator pedal is strongly depressed, the following icon and message will be displayed on the multi-information display.

A “Accelerator Pedal is Pressed”

■ **Pre-collision brake assist**

If the system determines that the possibility of a collision is high and the brake operation by the driver is insufficient, the braking power will be increased.

■ **Pre-collision brake control**

If the system determines that the possibility of a collision is extremely high, the brakes are automatically applied to help avoid the collision or reduce the impact of the collision.

■ **Emergency steering assist**

If the system determines that the following conditions are met, assistance will be provided to help enhance vehicle stability and prevent lane departure. During assistance, in addition to the pre-collision warning, the following icon will be displayed on the multi-information display.

- The possibility of a collision is high
- There is sufficient space within the lane to perform

evasive steering maneuvers

- The driver is operating the steering wheel

The brakes and steering are controlled to help avoid a collision or reduce the impact of a collision, regardless of the evasive steering maneuvers performed by the driver.

During assistance, the pre-collision warning will operate and a message will be displayed to warn the driver.

■ **Intersection collision avoidance support (left/right turn)**

In situations such as the following, if the system determines that the possibility of a collision is high, the pre-collision warning and pre-collision braking will operate. Depending on the intersection, assistance may not operate correctly.

- When turning left/right at an intersection and crossing the path of an oncoming vehicle

- When turning left/right and a pedestrian or bicycle is detected

■ **Intersection collision avoidance support (crossing vehicles)**

At an intersection, etc., if the system determines that the possibility of a collision with an approaching vehicle or motorcycle is high, the pre-collision warning and pre-collision braking will operate. Depending on the intersection, assistance may not operate correctly.

■ **Acceleration Suppression at Low Speed**

When driving at a low speed, if the accelerator pedal is strongly depressed and the system determines that there is a possibility of a collision, fuel cell system output will be restrained or the brakes will be applied weakly to restrict acceleration. During operation, a buzzer will sound and a warning indicator and message will be displayed on the multi-information display.

- A "Accelerator Pedal is Pressed"

⚠ WARNING

■ **Pre-collision braking**

- When the pre-collision braking function is operating, a large amount of braking force will be applied.

⚠ WARNING

- The pre-collision braking function is not designed to hold the vehicle stopped. If the vehicle is stopped by pre-collision brake control, the driver should operate the brakes immediately as necessary.
- The pre-collision braking function may not operate if certain operations are performed by the driver. If the accelerator pedal is being depressed strongly or the steering wheel is being turned, the system may determine that the driver is taking evasive action and possibly prevent the pre-collision braking function from operating.
- If the brake pedal is being depressed, the system may determine that the driver is taking evasive action and possibly delay the operation timing of the pre-collision brake control.

■ Acceleration Suppression at Low Speed

If the steering wheel is being turned, the system may determine that the driver is taking evasive action and possibly prevent the Acceleration Suppression at Low Speed function from operating or possibly causing its operation to be canceled.

■ Emergency steering assist

- The emergency steering assist will be canceled when the system determines that lane departure prevention control has completed.
- Depending on operations performed by the driver, emergency steering assist may not operate or operation may be canceled.

- If the accelerator pedal is depressed strongly, the steering wheel is turned heavily, the brake pedal is depressed, or the turn signal lever is operated, the system may determine that the driver is taking evasive action and the emergency steering assist may not operate.
- While the emergency steering assist is operating, if the accelerator pedal is depressed strongly, the steering wheel is turned heavily, or the brake pedal is depressed, the system may determine that the driver is taking evasive action and emergency steering assist operation may be canceled.
- While the emergency steering assist is operating, if the steering wheel is held or turned in the opposite direction of system operation, emergency steering assist operation will be canceled.

■ Operating conditions of each function of the pre-collision system

The pre-collision system is enabled and the system determines that the possibility of a frontal collision with a detected object is high.

However, the system will not operate in the following situations:

- When the vehicle has not been driven a certain amount after a terminal of the 12-volt battery has been disconnected and reconnected
- When the shift position is in R
- When the VSC OFF indicator is illuminated (only the pre-collision warning function will be operational)

The following are the operational speeds and cancelation conditions of each function:

- Pre-collision warning

Detectable objects	Vehicle speed	Relative speed between your vehicle and object
Preceding vehicles, stopped vehicles	Approximately 3 to 110 mph (5 to 180 km/h)	Approximately 3 to 110 mph (5 to 180 km/h)
Oncoming vehicles	Approximately 20 to 110 mph (30 to 180 km/h)	Approximately 50 to 130 mph (80 to 220 km/h)
Bicycles	Approximately 3 to 50 mph (5 to 80 km/h)	Approximately 3 to 50 mph (5 to 80 km/h)
Pedestrians	Approximately 3 to 50 mph (5 to 80 km/h)	Approximately 3 to 50 mph (5 to 80 km/h)
Preceding motorcycles, stopped motorcycles	Approximately 3 to 110 mph (5 to 180 km/h)	Approximately 3 to 50 mph (5 to 80 km/h)
Oncoming motorcycles	Approximately 20 to 110 mph (30 to 180 km/h)	Approximately 20 to 110 mph (30 to 180 km/h)

While the pre-collision warning is operating, if the steering wheel is operated heavily or suddenly, the pre-collision warning may be canceled.

- Pre-collision brake assist

Detectable objects	Vehicle speed	Relative speed between your vehicle and object
Preceding vehicles, stopped vehicles	Approximately 20 to 110 mph (30 to 180 km/h)	Approximately 7 to 110 mph (10 to 180 km/h)
Bicycles	Approximately 20 to 50 mph (30 to 80 km/h)	Approximately 20 to 50 mph (30 to 80 km/h)

Detectable objects	Vehicle speed	Relative speed between your vehicle and object
Pedestrians	Approximately 20 to 50 mph (30 to 80 km/h)	Approximately 20 to 50 mph (30 to 80 km/h)
Preceding motorcycles, stopped motorcycles	Approximately 20 to 110 mph (30 to 180 km/h)	Approximately 7 to 50 mph (10 to 80 km/h)

● Pre-collision braking

Detectable objects	Vehicle speed	Relative speed between your vehicle and object
Preceding vehicles, stopped vehicles	Approximately 3 to 110 mph (5 to 180 km/h)	Approximately 3 to 110 mph (5 to 180 km/h)
Oncoming vehicles	Approximately 20 to 110 mph (30 to 180 km/h)	Approximately 50 to 130 mph (80 to 220 km/h)
Bicycles	Approximately 3 to 50 mph (5 to 80 km/h)	Approximately 3 to 50 mph (5 to 80 km/h)
Pedestrians	Approximately 3 to 50 mph (5 to 80 km/h)	Approximately 3 to 50 mph (5 to 80 km/h)
Preceding motorcycles, stopped motorcycles	Approximately 3 to 110 mph (5 to 180 km/h)	Approximately 3 to 50 mph (5 to 80 km/h)
Oncoming motorcycles	Approximately 20 to 110 mph (30 to 180 km/h)	Approximately 20 to 110 mph (30 to 180 km/h)

If either of the following occur while the pre-collision braking function is operating, it will be canceled:

- The accelerator pedal is strongly depressed
- The steering wheel is operated heavily or suddenly
- Emergency steering assist

The emergency steering assist will not operate when the turn signal lights are flashing.

Detectable objects	Vehicle speed	Relative speed between your vehicle and object
Preceding vehicles, stopped vehicles, bicycles, pedestrians, motorcycles	Approximately 25 to 50 mph (40 to 80 km/h)	Approximately 25 to 50 mph (40 to 80 km/h)
Preceding vehicles, stopped vehicles, bicycles, pedestrians, motorcycles	Active steering function: * to 50 mph (* to 80 km/h)	Active steering function: * to 50 mph (* to 80 km/h)

*: Minimum vehicle speed: Vehicle speed at which evasion using pre-collision brake control is difficult

While the emergency steering assist is operating, if any of the following are performed, emergency steering assist operation may be canceled:

- The accelerator pedal is strongly depressed
- The steering wheel is operated heavily or suddenly
- The brake pedal is depressed
- Intersection collision avoidance support (left/right turn)

The intersection collision avoidance support (for left/right turning vehicles) will not operate when the turn signal lights are not flashing.

Detectable objects	Vehicle speed	Oncoming vehicle speed	Relative speed between your vehicle and object
Oncoming vehicles	Approximately 3 to 25 mph (5 to 40 km/h)	Approximately 3 to 45 mph (5 to 75 km/h)	Approximately 7 to 70 mph (10 to 115 km/h)
Pedestrians	Approximately 3 to 20 mph (5 to 30 km/h)	-	Approximately 3 to 25 mph (5 to 40 km/h)
Bicycles	Approximately 3 to 20 mph (5 to 30 km/h)	-	Approximately 3 to 30 mph (5 to 50 km/h)
Oncoming motorcycles	Approximately 3 to 25 mph (5 to 40 km/h)	Approximately 3 to 45 mph (5 to 75 km/h)	Approximately 7 to 70 mph (10 to 115 km/h)

● Intersection collision avoidance support (crossing vehicles)

Detectable objects	Vehicle speed	Crossing vehicle speed	Relative speed between your vehicle and object
Vehicles, Motorcycles (side)	Approximately 3 to 38 mph (5 to 60 km/h)	Approximately 31 mph or less (50 km/h or less)	Approximately 3 to 38 mph (5 to 60 km/h)

When driving at approximately 29 mph (40 km/h) or more, this system will only operate when the speed of the other vehicle is approximately 29 mph (40 km/h) or less.

The system operates only when the crossing vehicle speed is same as or less than the vehicle speed.

● Acceleration Suppression at Low Speed

The Acceleration Suppression at Low Speed function will not operate when the turn signal lights are flashing.

Detectable objects	Vehicle speed	Relative speed between your vehicle and object
Preceding vehicles, stopped vehicles, Pedestrians, Bicycles, Wall	Approximately 0 to 9 mph (0 to 15 km/h)	Approximately 0 to 9 mph (0 to 15 km/h)

While the Acceleration Suppression at Low Speed function is operating, if any of the following are performed, the low speed sudden acceleration suppression function operation will be canceled:

- The accelerator pedal is released
- The steering wheel is operated heavily or suddenly

■ Detection of detectable objects

Objects are detected based on their size, shape, and movement. Depending on the ambient brightness, movement, posture and direction of a detectable object, it may not be detected and the system may not operate properly.

The system detects shapes, such as the following, as detectable objects.

■ Situations in which the system may operate even though the possibility of a collision is not high

- In certain situations, such as the following, the system may determine that the possibility of a collision is high and operate:
 - When passing a detectable object

- When changing lanes while overtaking a detectable object
- When suddenly approaching a detectable object
- When approaching a detectable object or other object on the roadside, such as guardrails, utility poles, trees, walls, etc.
- When there is a detectable object or other object by the roadside at the entrance of a curve

- When there are patterns or a painting ahead of the vehicle that may be mistaken for a detectable object
- When passing a detectable object that is changing lanes or turning left/right

- When passing a detectable object which is stopped to make a left/right turn

- When a detectable object stops immediately before entering the path of the vehicle
- When passing through a location

with a structure above the road (traffic sign, billboard, etc.)

- When approaching an electric toll gate barrier, parking lot barrier, or other barrier that opens and closes
- When turning left/right and an oncoming vehicle, oncoming motorcycle, pedestrian or bicycle crosses in front of the vehicle
- When attempting to turn left/right in front of an oncoming vehicle, oncoming motorcycle, pedestrian or bicycle
- When turning left/right and an oncoming vehicle, oncoming motorcycle, pedestrian or bicycle stops or changes course immediately before entering the path of the vehicle
- When turning left/right and an oncoming vehicle turns left/right in front of the vehicle

- When the steering wheel is operated toward the path of an oncoming vehicle
- When there is an object moving above or under the road

Situations in which the system may not operate properly

- In certain situations, such as the following, a detectable object may not be detected by the front sensors, and the system may not operate properly:
 - When a detectable object is approaching your vehicle
 - When your vehicle or a detectable object is wandering
 - When a detectable object makes an abrupt maneuver (such as sudden swerving, acceleration or deceleration)
 - When suddenly approaching a detectable object
 - When the detectable object is near a wall, fence, guardrail, manhole cover, steel plate on the road surface, or another vehicle
 - When there is a structure above a detectable object
 - When part of a detectable object is hidden by another object (large luggage, umbrella, guardrail, etc.)
 - When multiple detectable objects are overlapping
 - When a bright light, such as the sun, is reflecting off of a detectable object
 - When a detectable object is white and looks extremely bright
 - When the color or brightness of a detectable object causes it to blend in with its surroundings
 - When a detectable object cuts in front of or suddenly emerges in front of your vehicle
 - When approaching a vehicle which is diagonal
 - If a bicycle is a child sized bicycle, is carrying a large load, is carrying an extra passenger, is carrying a

forward leaning rider, or has an unusual shape (bicycles equipped with a child seat, tandem bicycles, etc.)

- If a pedestrian or bicycle is shorter than approximately 3.2 ft. (1 m) or taller than approximately 6.5 ft. (2 m).
- When the silhouette of a pedestrian or bicycle is unclear (such as when they are wearing a raincoat, long skirt, etc.)
- When a pedestrian is bending forward or squatting
- When a pedestrian or bicycle is moving at high speed
- When a pedestrian is pushing a stroller, wheelchair, bicycle or other vehicle
- When a detectable object blends in with the surrounding area, such as when it is dim (at dawn or dusk) or dark (at night or in a tunnel)
- When the vehicle has not been driven for a certain amount of time after the fuel cell system was started
- While turning left/right or a few seconds after turning left/right
- While driving around a curve and a few seconds after driving around a curve
- When turning left/right and an oncoming vehicle is driving in a lane 3 or more lanes from the vehicle
- When turning left/right and the direction of the vehicle differs greatly from the direction traffic flows in the oncoming lane

- When turning left/right, a pedestrian or bicycle behind the vehicle comes in front of it as if it overtakes the vehicle

- When at an intersection, the approaching crossing vehicle is long in overall length, such as a large truck, towing trailer, etc.
- In addition to the preceding, in certain situations, such as the following, the emergency steering assist may not operate properly:
 - When a detectable object is too close to the vehicle
 - When there is insufficient space to perform evasive steering maneuvers or an obstruction exists in the evasion direction
 - When there is an oncoming vehicle
- In addition to the preceding, in certain situations, such as the following, walls may not be detected as a target object and the Acceleration Suppression at Low Speed function may not operate properly:
 - When scenery behind the wall is visible, such as a glass door, grid fence, etc.
 - When the wall is slanted or low
 - When the wall is narrow, such as a pole, etc.
 - When the wall is made of plants, such as a hedge, etc.
 - When the road, etc. is reflected on the wall
 - When the vehicle is approaching the wall at an angle

Changing the pre-collision setting

- The pre-collision system can be enabled/disabled through a customize setting. (→P.674)

The system is enabled each time the power switch is turned to ON.

- When the system is disabled, the PCS warning light will illuminate and a message will be displayed on the multi-information display.
- The pre-collision setting can be changed on the customize settings. (→P.674)
- When the pre-collision warning timing is changed, the emergency steering assist (excluding the active steering function) timing will also be changed.

When  is selected, the emergency steering assist (excluding the active steering function) will not operate in most cases.

- When the system determines that the driver is not facing forward, the pre-collision warning and emergency steering assist will operate at the  timing, regardless of the user setting.
- When the dynamic radar cruise control is operating, the pre-collision warning will operate at the  timing, regardless of the user setting.
- When the Traffic Jam Assist is operating, the pre-collision warning will operate at the

 timing, regardless of the user setting.

LTA (Lane Tracing Assist)*

*: Vehicles with Toyota Teammate Advanced Drive, refer to “Toyota Teammate Advanced Drive OWNER’S MANUAL”.

LTA functions

- When driving on a road with clear lane lines with the dynamic radar cruise control operating, lane lines and preceding and surrounding vehicles are detected using the front camera and radar sensor, and the steering wheel is operated to maintain the vehicle’s lane position.

Use the this function only on highways and expressways.

If the dynamic radar cruise control is not operating, the function will not operate.

In situations where the lane lines are difficult to see or are not visible, such as when in a traffic jam, support will be provided using the path of preceding and surrounding vehicles.

If the system determines that the steering wheel has not been operated for a certain amount of time or the steering wheel is not being firmly gripped, the driver will be alerted and this function will be temporarily canceled.

If the steering wheel is firmly gripped, the function will begin operating again.

- When the function is operating, if the vehicle is likely to depart from its lane, the driver will be alerted via a display and buzzer.

When the buzzer sounds, check the area around the vehicle and carefully operate the steering wheel to move the vehicle back to the center of the lane.

⚠ WARNING

■ Before using the LTA system

- Do not overly rely on the LTA system. The LTA system is not a system which provides automated assistance in driving and it is not a system which reduces the amount of attention necessary for safe driving. The driver is solely responsible for paying attention to their surroundings and operating the steering wheel as necessary to ensure safety. Also, the driver is responsible for taking adequate breaks when fatigued, such as when driving for a long time.
- Failure to perform appropriate driving operations and pay careful attention may lead to an accident.
- When not using the LTA system, turn it off using the LTA switch.

■ Operating conditions of function

This function is operable when all of

the following conditions are met:

- The LTA system detects lane lines or the path of preceding or surrounding vehicles.
- The dynamic radar cruise control is operating.
- The lane width is approximately 10 to 13 ft. (3 to 4 m).
- The turn signal lever is not being operated.
- The vehicle is not being driven around a sharp curve.
- The vehicle is not accelerating or decelerating more than a certain amount.
- The steering wheel is not being turned with a large force.
- The hands off steering wheel warning (→P.283) is not operating.
- The vehicle is being driven in the center of a lane.

■ **Temporary cancelation of functions**

- When the operating conditions are no longer met, a function may be temporarily canceled. However, when the operation conditions are met again, operation of the function will automatically be restored. (→P.282)
- If the operating conditions of a function are no longer met while the function is operating, a buzzer may sound to indicate that the function has been temporarily canceled.
- The steering assist operation of the function can be overridden by the steering wheel operation of the driver.

■ **Lane departure warning function when the LTA is operating**

- Even if the LDA warning method is changed to vibration of the steering wheel, if the vehicle deviates from the lane while the LTA is operating, the warning buzzer will

sound to alert the driver.

- If steering wheel operation equivalent to that necessary for a lane change is detected, the system will determine the vehicle is not deviating from the lane and the warning will not operate.

■ **Hands off steering wheel warning operation**

- When the system determines the driver is not holding the steering wheel, a message urging the driver to grip the steering wheel and the icon shown in the illustration will be displayed on the multi-information display to warn the driver. If the system detects that the steering wheel is held, the warning will be canceled. When using the system, make sure to grip the steering wheel firmly, regardless of whether the warning is operating or not.

- If no operations are detected for a certain amount of time, the warning will operate, and the function will be temporarily canceled. This warning may also operate if the driver only operates steering wheel a small amount continuously.

■ **Situations in which the hands off steering wheel warning may not operate properly**

- Depending on the condition of the vehicle, handle control condition and road surface, the warning function may not operate.
- Vehicles with LCA: In the following situations, the system may not be able to detect when the driver's hands are off the steering wheel.

- When a steering wheel cover is installed
- When the driver is wearing gloves
- When foreign matter is attached to the steering wheel
- When the driver is gripping the wood trim, seam of the leather, spokes, or other part of the steering wheel that does not have sensors
- Vehicles with LCA: In the following situations, the hands off steering wheel warning may not operate and the LTA function may continue operating even though the driver's hands are off the steering wheel:
 - When something other than a hand is contacting the steering wheel
 - When a wide object or arms are held across the steering wheel

Enabling/disabling the system

The LTA will change between ON/OFF each time the LTA switch is pressed.

When the LTA is ON, the LTA indicator will illuminate.

⚠ WARNING

■ Situations in which the functions may not operate properly

In the following situations, the functions may not operate properly and the vehicle may depart from its lane. Do not overly rely on these functions. The driver is solely responsible for paying attention to their surroundings and operating the steering wheel as necessary to ensure safety.

- When a preceding or surrounding vehicle changes lanes (Your vehicle may follow the preceding or surrounding vehicle and also change lanes)

- When a preceding or surrounding vehicle is swaying (Your vehicle may sway accordingly and depart from the lane)
- When a preceding or surrounding vehicle departs from a lane (Your vehicle may follow the preceding or surrounding vehicle and also depart from the lane)

- ⚠ WARNING**
- When a preceding or surrounding vehicle is being driven extremely close to the left/right lane line (Your vehicle may follow the preceding or surrounding vehicle accordingly and depart from the lane)
 - When there are moving objects or structures in the surrounding area (Depending on the position of the moving object or structure relative to your vehicle, your vehicle may sway)
 - When the vehicle is struck by a crosswind or the turbulence of other nearby vehicles
 - Situations in which the sensors may not operate properly: →P.264
 - Situations in which the lane may not be detected: →P.265
 - When it is necessary to disable the system: →P.259

Operation display of steering wheel operation support

The operating state of the LTA system is indicated.

Indicator	Lane display	Steering icon	Situation
 White	 Gray/White	 Gray	LTA is on standby
 Green	 Green	 Green	LTA is operating
 Yellow Flashing	 Yellow Flashing	 Green	The vehicle is departing the lane toward the side which the lane display is flashing

LCA (Lane Change Assist)*

*: Vehicles with Toyota Teammate Advanced Drive, refer to “Toyota Teammate Advanced Drive OWNER’S MANUAL”.

LCA functions

This function is linked to the LTA and provides assistance in performing lane changes through steering wheel operations.

Use the this function only on highways and expressways.

The steering assist operation can be overridden by the steering wheel operation of the driver.

The lane change assist function is not designed to operate when changing lanes at a junction.

⚠ WARNING

■ Before using the LCA system

- Do not overly rely on the LCA system.
The LCA system is not a system which provides automated assistance in driving, and it is not a system which reduces the need for checking an adjacent lane for other vehicles, approaching vehicles, etc. when changing lanes. The driver is solely responsible for paying attention to their surroundings and operating the steering wheel as necessary to ensure safety.
Also, do not use the LCA to change lanes into which a lane change should not be performed (oncoming lanes, road shoulders, etc.).
- Failure to perform appropriate driving operations and pay careful attention may lead to an accident.

■ Operating conditions of function

This function is operable when all of the following conditions are met:

- The LTA is operating.
- The lane change assist function is enabled by a customize setting.
- The vehicle speed is between approximately 55 and 85 mph (90 and 140 km/h).
- The system detects a broken white line on the side which the lane change is to be performed.
- A vehicle is not detected in the lane toward which the turn signal is operated.
- The steering wheel is not being turned with a large force.
- The hands off steering wheel warning (→P.283) is not operat-

ing.

■ Cancellation of functions

In the following situations, operation of the LCA may be canceled with the display and buzzer:

- When the operating conditions (→P.282) are no longer met
- When the system can no longer detect lane lines
- When the turn signal lever is operated to the second position (→P.287)
- When the turn signal lever is operated in the opposite direction of the lane change
- When the system detects operation of the steering wheel, brake pedal or accelerator pedal by the driver

If the system detects that a vehicle is quickly approaching in the lane toward which the turn signal is operated a buzzer will sound and a message will be displayed to alert the driver. At the same time the steering wheel may be slightly operated to help keep the vehicle away from the approaching vehicle.

■ Hands off steering wheel warning operation

When the system determines the driver is not holding the steering wheel, a message urging the driver to grip the steering wheel and the icon shown in the illustration will be displayed on the multi-information display to warn the driver. If the system detects that the steering wheel is held, the warning will be canceled. When using the system, make sure to grip the steering wheel firmly, regardless of whether the warning is operating or not.

■ Situations in which the hands off steering wheel warning may not operate properly

- Depending on the condition of the vehicle, handle control condition and road surface, the warning function may not operate.
- In the following situations, the system may not be able to detect when the driver's hands are off the steering wheel.
 - When a steering wheel cover is installed
 - When the driver is wearing gloves
 - When foreign matter is attached to the steering wheel
 - When the driver is gripping the wood trim, seam of the leather, spokes, or other part of the steering wheel that does not have sensors
- In the following situations, the hands off steering wheel warning may not operate and the LCA function may continue operating even though the driver's hands are off the steering wheel:
 - When something other than a hand is contacting the steering wheel
 - When a wide object or arms are held across the steering wheel

Operating the LCA

If the turn signal lever is held in the first position, the lane change direction will be displayed and the function will operate.

To change lanes by holding the turn signal lever in the first position without using the LCA, turn the customize setting of the LCA off.

- 1 First position: LCA is operational
- 2 Second position: LCA is not operational

⚠ WARNING

■ Situations in which the LCA should not be used

- When driving on a one lane road
- When there is no broken white line between the current lane and the lane to be changed to

Enabling/disabling the system

LCA can be enabled/disabled through a customize setting. (→P.674)

Displays and system operation

The operating state of the LCA system is indicated.

LCA display	Steering icon	Condition
 Blue arrow and white line	 Green	LCA is operating
	 Gray	Approaching vehicle detected while LCA is operating
Not displayed	 Gray	Lane line no longer detected while LCA is operating

LDA (Lane Departure Alert)*

*: Vehicles with Toyota Teammate Advanced Drive, refer to “Toyota Teammate Advanced Drive OWNER’S MANUAL”.

Basic functions

The LDA system warns the driver if the vehicle may deviate from the current lane or course*, and also can slightly operate the steering wheel to help avoid deviation from the lane or course*.

The front camera is used to detect lane lines or a course*.

*: Boundary between the asphalt and grass, soil, etc., or structures, such as a curb, guardrail, etc.

■ Lane departure alert function

When the system determines that the vehicle might depart from its lane or course*, a warning is displayed on a display, and either a warning buzzer will sound or the steering wheel will vibrate to alert the driver.

Check the area around your vehicle and carefully operate the steering wheel to move the vehicle back to the center of the lane or course*.

If the system determines that the vehicle may collide with a vehicle in an adjacent lane, the lane departure alert will operate even if the

turn signals are operating.

*: Boundary between the asphalt and grass, soil, etc., or structures, such as a curb, guardrail, etc.

■ Lane departure prevention function

If the system determines that the vehicle is likely to depart from its lane or course*, it provides assistance through steering wheel operations to help avoid deviation from the lane or course.

If the system determines that the steering wheel has not been operated for a certain amount of time or the steering wheel is not being firmly gripped, a warning message may be displayed and a warning buzzer may sound to alert the driver.

If the system determines that the vehicle may collide with a vehicle in

an adjacent lane, the lane departure prevention function will operate even if the turn signals are operating.

*: Boundary between the asphalt and grass, soil, etc., or structures, such as a curb, guardrail, etc.

■ **Break suggestion function**

If the vehicle is swaying, a message will be displayed and a buzzer will sound to urge the driver to take a break.

⚠ **WARNING**

■ **Before using the LDA system**

- Do not overly rely on the LDA system. The LDA system is not a system which provides automated assistance in driving. However, as it is not a system which reduces the amount of attention necessary for safe driving. The driver is solely responsible for paying attention to their surroundings and operating the steering wheel as necessary to ensure safety. Also, the driver is responsible for taking adequate breaks when fatigued, such as when driving for a long time.
- Failure to perform appropriate driving operations and pay careful attention may lead to an accident.

■ **Operating conditions of each function**

- Lane departure alert/prevention function

This function is operable when all of the following conditions are met:

- The vehicle speed is approximately 30 mph (50 km/h) or more. Operation may be possible when the vehicle speed is approximately 25 mph (40 km/h) or more if vehicles, motorcycles, bicycles, or pedestrians are detected near the lane.
- The system recognizes a lane or course*. (When recognized on only one side, the system will operate only for the recognized side.)
- The lane width is approximately 9.8 ft. (3 m) or more.
- The turn signal lever is not being operated. (Except when a vehicle is detected in the direction that the turn signal lever is operated.)
- The vehicle is not being driven around a sharp curve.
- The vehicle is not accelerating or decelerating more than a certain amount.
- The steering wheel is not being turned sufficiently to perform a lane change.
- When the VSC or TRAC system is not turned off

*: Boundary between the asphalt and grass, soil, etc., or structures, such as a curb, guardrail, etc.

■ Temporary cancellation of functions

When the operating conditions are no longer met, a function may be temporarily canceled. However, when the operation conditions are met again, operation of the function will automatically be restored. (→P.290)

■ Operation of the lane departure alert function/lane departure prevention function

- Depending on the vehicle speed, road conditions, lane departure angle, etc., operation of the lane

departure prevention function may not be felt or the function may not operate.

- Depending on the conditions, the warning buzzer may operate even if vibration is selected through a customize setting.
- If a course* is not clear or straight, the lane departure alert function or lane departure prevention function may not operate.
- The lane departure alert function or lane departure prevention function may not operate if the system judges that the vehicle is intentionally being steered to avoid a pedestrian or parked vehicle.
- It may not be possible for the system to judge if there is danger of a collision with a vehicle in an adjacent lane.
- Depending on the driver condition, the lane departure alert function or lane departure prevention function changes the timing of operation.
- The steering assist operation of the lane departure prevention function can be overridden by the steering wheel operation of the driver.

*: Boundary between the asphalt and grass, soil, etc., or structures, such as a curb, guardrail, etc.

■ Hands off steering wheel warning operation

In the following situations, a message urging the driver to operate the steering wheel and an icon will be displayed and a buzzer will sound to warn the driver. When using the system, make sure to grip the steering wheel firmly, regardless of whether the warning is operating or not.

- When the system determines that the driver is not securely holding the steering wheel, or the steering wheel is not being operated when the steering assist operation of the lane departure prevention function is operating

The length of time that the warning buzzer operates will become longer as the frequency of the steering assist operating increases. If the system judges that the steering wheel has been operated, the warning buzzer stop.

■ **Break suggestion function**

This function is operable when all of the following conditions are met:

- The vehicle speed is approximately 32 mph (50 km/h) or more.
- The lane width is approximately 9.8 ft. (3 m) or more.

Depending on the condition of the vehicle and road surface, the break suggestion function may not operate.

Changing LDA settings

- The LDA system can be enabled/disabled through a customize setting. (→P.674)
- The settings of the LDA can be changed on the customize settings. (→P.674)

! WARNING

■ **Situations in which the system may not operate properly**

In the following situations, the system may not operate properly and the vehicle may depart from its lane. Do not overly rely on these functions. The driver is solely responsible for paying attention to their surroundings and operating the steering wheel as necessary to ensure safety.

- When the boundary between the asphalt and grass, soil, etc., or structures, such as a curb, guardrail, etc. is not clear or straight
- When the vehicle is struck by a crosswind or the turbulence of other nearby vehicles
- Situations in which the lane may not be detected: →P.265
- Situations in which the sensors may not operate properly: →P.264
- Situations in which some or all of the functions of the system cannot operate: →P.265
- When it is necessary to disable the system: →P.259

Displays and system operation

The operating state of the lane departure alert function and steering

assist operation of the lane departure prevention function are indicated.

Indicator	Lane display	Steering icon	Condition
Not illuminated	Not illuminated	Not illuminated	System disabled
 White	 Gray	Not illuminated	Lane lines are not detected by the system
 White	 White	Not illuminated	Lane lines are detected by the system
 Yellow Flashing	 Yellow Flashing	Not illuminated	Lane departure alert function is operating for the side which the lane display is flashing
 Green	 Green	 Green	Lane departure prevention function is operating for the side which the lane display is illuminated
 Yellow Flashing	 Yellow Flashing	 Green	Lane departure alert function/lane departure prevention function is operating for the side which the lane display is flashing

PDA (Proactive driving assist)*

*: Vehicles without Toyota Teammate Advanced Drive

When a detectable object (→P.295) is detected, the proactive driving assist operates the brakes and steering wheel to help prevent the vehicle from approaching too close to the object.

 **WARNING**

■ **For safe use**

Driving safely is solely the responsibility of the driver.

- The proactive driving assist is designed to provide some assistance for regular braking and steering operations, as well as helping to prevent the vehicle from approaching too close to a detectable object. However, the scope of this assistance is limited. The driver should perform brake and steering operations as necessary. Read the following items carefully. Do not overly rely on the proactive driving assist and always drive carefully. (→P.297)

- The proactive driving assist is not a system which reduces the amount of attention necessary for safe driving. Even if the system is operating correctly, the surrounding conditions as recognized by the driver and detected by the system may differ. It is necessary for the driver to pay attention, assess risks, and ensure safety. Over-reliance on this system to drive the vehicle safely may lead to an accident resulting in death or serious injury.

- Proactive driving assist is not a system which allows for inattentive driving and is not a system which assists in poor visibility conditions. The driver is solely responsible for paying attention to their surroundings and driving safely.

■ **When turning proactive driving assist off**

- Situations in which the sensors may not operate properly: →P.264
- When it is necessary to disable the system: →P.259

System operating conditions and detectable objects

According to the driving conditions, the operation and detectable objects of the proactive driving assist will change as follows.

Function	Conditions	Operation	Detectable objects
Obstacle Anticipation Assist (OAA)	A detectable object is detected crossing the road	Assistance with some brake operations is provided in order to reduce the possibility of a collision.	<ul style="list-style-type: none"> • Pedestrians • Bicyclists
	A detectable object is detected on the side of the road	Assistance with some brake and steering wheel operations are provided according to the surrounding conditions to help prevent the vehicle from approaching too close to a detected object.	<ul style="list-style-type: none"> • Pedestrians • Bicyclists • Parked vehicles
		Assistance with steering wheel operations is provided within a range that the vehicle will not deviate from its current lane.	

Function	Conditions	Operation	Detectable objects
Deceleration Assist (DA)	A preceding vehicle or an adjacent vehicle cutting in front of the vehicle is detected	The vehicle is gently decelerated so that the vehicle-to-vehicle distance will not be excessively short.	<ul style="list-style-type: none"> • Preceding vehicles • Motorcycles
	A curve is detected ahead of the vehicle	The vehicle is gently decelerated if the vehicle speed is determined to be too high for the curve ahead.	None
Steering Assist (SA)	Lane is detected	The system anticipates the driver's operation and supports the operation of the steering wheel.	None

■ **Vehicle speeds at which the system can operate**

- Detectable object crossing the road assistance
Approximately 20 to 35 mph (30 to 60 km/h)
- Detectable object on the side of the road assistance
Approximately 20 to 35 mph (30 to 60 km/h)
- Preceding vehicle deceleration assistance
Approximately 15 mph (20 km/h) or more
- Curve deceleration assistance
Approximately 15 mph (20 km/h) or more
- Steering assist within a lane

Approximately 5 to 80 mph (10 to 140 km/h)

■ **System operation will be canceled when**

- In the following situations, system operation will be canceled:
 - When the dynamic radar cruise control or cruise control is operating
 - When the PCS is off
 - Situations in which some or all of the functions of the system cannot operate: →P.265
 - When the P, R or N shift position is selected
- In the following situations, the brake operation assist will be canceled:
 - Approximately 9 mph (15 km/h) or less
 - When a certain vehicle speed has been reached, as judged by the system, according to the sur-

rounding conditions

- In the following situations, system operation may be canceled:
 - When the brake control or output restriction control of a driving support system operates (For example: PCS, drive-start control)
 - When the system determines that a detected object has moved away from the vehicle
 - When lane lines can no longer be detected
 - When the brake pedal has been depressed
 - When the accelerator pedal has been depressed
 - When the steering wheel has been operated with more than a certain amount of force
 - When the turn signal lever is operated to the left/right turn position

 **WARNING**

■ **Situations in which the system may not operate properly**

- Situations in which the lane may not be detected: →P.265
- When a detectable object stops immediately before entering the path of the vehicle
- When passing extremely close to a detectable object behind a guardrail, fence, etc.
- When changing lanes while overtaking a detectable object
- When passing a detectable object that is changing lanes or turning left/right
- When there are objects (guardrails, power poles, trees, walls, fences, poles, traffic cones, mailboxes, etc.) in the surrounding area

- When there are patterns or a painting ahead of the vehicle that may be mistaken for a detectable object
- When passing through a place with a low structure above the road (tunnel with a low ceiling, traffic sign, signboard, etc.)
- When driving on snowy, icy, or rutted roads
- When a detectable object is approaching your vehicle
- When your vehicle or a detectable object is wandering
- When the movement of a detectable object changes (change in direction, sudden acceleration or deceleration, etc.)
- When suddenly approaching a detectable object
- When a preceding vehicle or motorcycle is not directly in front of your vehicle
- When there is a structure above a detectable object
- When part of a detectable object is hidden by another object (large luggage, umbrella, guardrail, etc.)
- When multiple detectable objects are overlapping
- When a bright light, such as the sun or headlights of another vehicle, is reflecting off of the detectable object
- When the detectable object is white and looks extremely bright
- When the color or brightness of the detectable object causes it to blend in with its surroundings

⚠ WARNING

- When a detectable object cuts in front of or emerges from beside a vehicle
- When approaching a vehicle ahead which is perpendicular or at an angle to the vehicle, or is facing the vehicle
- If a parked vehicle is perpendicular or at an angle to the vehicle
- When a bicycle is a child sized bicycle, is carrying a large load, is carrying an extra passenger, or has an unusual shape (bicycles equipped with a child seat, tandem bicycles, etc.)
- When a pedestrian or bicyclist is shorter than approximately 3.2 ft. (1 m) or taller than approximately 6.5 ft. (2 m)
- When the silhouette of a pedestrian or bicyclist is unclear (such as when they are wearing a raincoat, long skirt, etc.)
- When a pedestrian or bicyclist is bending forward or squatting
- When a pedestrian or bicyclist is moving at high speed
- When a pedestrian is pushing a stroller, wheelchair, bicycle or other vehicle
- When a detectable object blends in with the surrounding area, such as when it is dim (at dawn or dusk) or dark (at night, in a tunnel, etc.)

- When the lane width is 13.1 ft. (4 m) or more
- When the lane width is 8.2 ft. (2.5 m) or less
- When the vehicle has not been driven for a certain amount of time after the fuel cell system was started
- While turning left or right or a few seconds after turning left or right
- While changing lanes or a few seconds after changing lanes
- When entering a curve, driving around a curve and a few seconds after driving around a curve

Changing proactive driving assist settings

- The proactive driving assist can be enabled/disabled through a customize setting. (→P.674)
- The following settings of the proactive driving assist can be changed through customize settings. (→P.674)

System operation display

Depending on the situation, the following indicators or icons will be displayed.

Some icons cannot be displayed unless the display is changed to

the driving safety support function information screen.

Icon	Meaning
	<ul style="list-style-type: none"> • White: Monitoring for detectable objects • Green: Detectable object crossing the road or detectable object on the side of the road assistance operating
	<p>A pedestrian has been detected as crossing the road or on the side of the road and brake or steering assistance is operating</p>
	<p>A vehicle has been detected on the side of the road and brake or steering operation assistance is being performed</p>
	<ul style="list-style-type: none"> • Steering operation assistance is being performed to prevent the vehicle from approaching too close to a detectable object on the side of the road • When the steering assist is operating
	<p>Preceding vehicle deceleration assistance is being performed</p>
	<p>Warning to maintain appropriate vehicle-to-vehicle distance</p>
	<p>Curve deceleration assistance is being performed</p>

■ **Hands off steering wheel warning operation**

In the following situations, a message urging the driver to grip the steering wheel and the icon shown in the illustration will be displayed on the display to warn the driver. If the system detects that the steering

wheel is held, the warning will be canceled. When using the system, make sure to grip the steering wheel firmly, regardless of whether the warning is operating or not.

- When assistance to a detectable object crossing the road or assistance to a detectable object on the side of the road is performed and the system determines the driver is not holding the steering wheel

If no operations are detected for a certain amount of time, a buzzer will sound, the warning will operate.

This warning may also operate if the driver only operates steering wheel a small amount continuously.

■ **Warning operation after preceding vehicle deceleration assistance has ended**

After preceding vehicle deceleration assistance has ended, if the driver does not operate the brake pedal or accelerator pedal and the vehicle approaches the preceding vehicle, the display will flash and a buzzer will sound to urge the driver to decelerate. If the system determines that the driver is operating the brake pedal or accelerator pedal, the warning will be canceled.

FCTA (Front Cross Traffic Alert) *

*: Vehicles with Toyota Teammate Advanced Drive, refer to “Toyota Teammate Advanced Drive OWNER’S MANUAL”.

When approaching an intersection, etc., at a low speed, vehicles approaching from the left and right of the front of the vehicle can be detected and the driver informed of these vehicles.

FCTA system control

- When the system detects a vehicle approaching from the left or right in front of your vehicle when approaching an intersection, a notification will be displayed.
- Head-up display

- When the system determines that your vehicle may be about to enter an intersection even though a vehicle is approaching from the left or right in front of your vehicle, a buzzer will sound and a mes-

sage will be displayed to urge you to depress the brake pedal.

- Multi-information display

⚠ WARNING

■ **For safe use**

Driving safely is solely the responsibility of the driver. Pay careful attention to the surrounding conditions in order to ensure safe driving. The FCTA system is a supplementary system that informs the driver of vehicles approaching from the left and right of the front of the vehicle.

Over-reliance on this system may lead to an accident resulting in death or serious injury. The details of the warning display may differ from the actual traffic conditions. Although the warning display will stop being displayed after a certain amount of time, this does not necessarily indicate that there are no longer any vehicles or pedestrians around your vehicle.

■ **FCTA system operating conditions**

The system will operate when all of the following conditions are met:

- A shift position other than P or R is selected
- The vehicle speed is approximately 10 mph (15 km/h) or less

- A vehicle is approaching from the left or right in front of your vehicle at a speed between approximately 7 to 37 mph (10 to 60 km/h)
- There are no vehicles in front of your vehicle
- The accelerator pedal is not being strongly depressed
- The brake pedal is not being strongly depressed

■ **Situations in which the system may operate even though no vehicles are approaching**

In certain situations, such as the following, the system may operate even though no vehicles are approaching:

- When approaching objects on the roadside, such as guardrails, traffic signs, utility poles, street lights, trees, tall grass, walls, etc.
- When passing an object on the side of the road, such as a parked vehicle
- When a vehicle or pedestrian is approaching from the left or right in front of your vehicle in the distance
- When a vehicle or pedestrian is moving within a parking spot, etc., next to the lane your vehicle is in
- When a pedestrian or bicyclist is approaching on a sidewalk
- When a vehicle or pedestrian is moving away from your vehicle
- When an approaching vehicle is decelerating or stops
- When an approaching vehicle makes a left/right turn immediately in front of your vehicle
- When a pedestrian is approaching your vehicle
- When an oncoming vehicle makes a right/left turn
- When your vehicle enters an intersection before a vehicle approaching from the left or right

in front of your vehicle

- When stopped at traffic light and a vehicle approaches from the left or right in front of your vehicle
- When making a left/right turn in front of an approaching vehicle

- When an oncoming vehicle approaches and passes
- When being overtaken by another vehicle
- When driving next to another vehicle or a pedestrian
- When a vehicle or pedestrian approaches the side of your vehicle

■ **Situations in which the system may not operate properly**

In situations such as the following, a vehicle may not be detected by a front side radar sensor and the system may not operate properly:

- If an approaching vehicle moves suddenly (sudden steering, acceleration, deceleration, etc.)

- If a vehicle is approaching from the left or right of the front of your vehicle diagonally
- When a vehicle is approaching from the left or right in front of your vehicle in the distance
- When there is an object between

your vehicle and an approaching vehicle

- When several vehicles are approaching with little space between them
- Situations in which the sensors may not operate properly: →P.264
- Situations in which some or all of the functions of the system cannot operate: →P.264

Changing FCTA settings

- The FCTA can be enabled/disabled through a customize setting. (→P.674)
- The following settings of the FCTA can be changed through customize settings. (→P.674)

RSA (Road Sign Assist)*

*: Vehicles with Toyota Teammate Advanced Drive, refer to “Toyota Teammate Advanced Drive OWNER’S MANUAL”.

The RSA system detects specific road signs using the front camera and/or navigation system (when speed limit information is available) and warns the driver via displays and buzzers.

⚠ WARNING**■ For safe use**

- Driving safely is solely the responsibility of the driver. Pay careful attention to the surrounding conditions in order to ensure safe driving.
- Do not rely solely upon the RSA. The RSA assists the driver by providing road sign information, but it is not a replacement for the driver’s own vision and awareness. Driving safely is solely the responsibility of the driver. Pay careful attention to the surrounding conditions in order to ensure safe driving.

■ Situations in which the RSA should not be used

When it is necessary to disable the system: →P.259

■ Situations in which the system may not operate properly

Situations in which the sensors may not operate properly: →P.264

Display Function

- When the front camera detects a sign or information of a sign is available from the navigation system, the sign will be displayed on the display.
- Multiple signs can be displayed.

Depending on the specifications of the vehicle, the number of displayed signs may be limited.

■ Operating conditions of sign display

Signs will be displayed when the following conditions are met:

- The system has detected a sign

In the following situations, a displayed sign may stop being displayed:

- When a new sign has not been detected for a certain distance
- When the system determines that the road being driven on has changed, such as after a left or right turn

■ Situations in which the display function may not operate properly

In the following situations, the RSA system may not operate properly and may not detect signs or may display the incorrect sign. However, this does not indicate a malfunction.

- When a sign is dirty, faded, tilted or bent
- When the contrast of an electronic sign is low
- When all or part of a sign is hidden by a tree, utility pole, etc.
- When a sign is detected by the front camera for a short amount of

time

- When the driving state (turning, changing lanes, etc.) is judged incorrectly
- When a sign is immediately after a freeway junction or in an adjacent lane just before merging
- When stickers are attached to the rear of a preceding vehicle
- When a sign similar to a system compatible sign is detected as a system compatible sign
- When a speed limit sign for a frontage road is within detection range of the front camera
- When driving around a roundabout
- When a sign intended for trucks, etc. is detected
- When a sign is with supplemental sign (End point, day of week, time etc.)
- When a sign is within road works area
- When the navigation system map data is out of date
- When the navigation system cannot be used

In this case, the speed limit signs displayed on the multi-information display and navigation system display may differ.

Notification function

In the following situations, the RSA system will output a warning to notify the driver.

- If the vehicle speed exceeds the speed warning threshold of the speed limit sign displayed on the display, the sign display will be emphasized and a buzzer will sound.

- When the RSA system detects a do not enter sign and determines that the vehicle has entered a no-entry area, the do not enter sign displayed on the display will flash and a buzzer will sound.

Operating conditions of the notification functions

- Excess speed notification function

This function will operate when the following condition is met:

- A speed limit road sign is recognized by the system.

- No entry notification function

This function will operate when all of the following conditions are met:

- More than one no entry road signs are recognized by the system simultaneously.
- The vehicle is passing between no entry road signs recognized by the system.

Types of road signs supported

- The following types of road signs can be displayed.

However, non-standard or recently introduced traffic signs may not be displayed.

	Speed limit
	
	Do Not Enter
	No U-turn
	No Turn On Red
	Stop
	Yield
	Warning

- Depending on the specifications of the vehicle, signs may be displayed overlapping.

Changing RSA settings

The following settings of the RSA can be changed through customize settings. (→P.674)

Dynamic radar cruise control*

*: Vehicles with Toyota Teammate Advanced Drive, refer to “Toyota Teammate Advanced Drive OWNER’S MANUAL”.

This dynamic radar cruise control detects the presence of vehicles ahead, determines the current vehicle-to-vehicle distance, and operates to maintain a suitable distance from the vehicle ahead. The desired vehicle-to-vehicle distance can be set by operating the vehicle-to-vehicle distance switch.

Use the dynamic radar cruise control only on highways and expressways.

WARNING

■ For safe use

- Driving safely is solely the responsibility of the driver. Do not overly rely on this system, and pay careful attention to the surrounding conditions in order to ensure safe driving.

 **WARNING**

- The dynamic radar cruise control provides driving assistance to reduce the driver's burden. However, there are limitations to the assistance provided. Read the following items carefully. Do not overly rely on this system and always drive carefully.

Conditions under which the system may not operate correctly:
→P.312

- Set the speed appropriately according to the speed limit, traffic flow, road conditions, weather conditions, etc. The driver is responsible for confirming the set speed.
- Even if the system is operating correctly, the condition of a preceding vehicle as recognized by the driver and detected by the system may differ. Therefore, it is necessary for the driver to pay attention, assess risks, and ensure safety. Over-reliance on this system to drive the vehicle safely may lead to an accident resulting in death or serious injury.

■ **Precautions for the driving assist systems**

Observe the following precautions, as there are limitations to the assistance provided by the system. Over-reliance on this system may lead to an accident resulting in death or serious injury.

- **Details of support provided for the driver's vision**

The dynamic radar cruise control is only intended to help the driver in determining the distance between the driver's own vehicle and a designated preceding vehicle. It is not a system which allows for careless or inattentive driving, and is not a system which assists in poor visibility conditions. The driver must pay attention to their surroundings, even when the vehicle stops.

- **Details of support provided for the driver's judgement**

The dynamic radar cruise control determines whether the distance between the driver's own vehicle and a designated preceding vehicle is within a set range. It is not capable of making any other type of judgement. Therefore, it is absolutely necessary for the driver to remain vigilant and to determine whether or not there is a possibility of danger.

- **Details of support provided for the driver's operation**

The dynamic radar cruise control does not include functions which will prevent or avoid collisions with vehicles ahead of your vehicle. Therefore, if there is ever any possibility of danger, the driver must take immediate and direct control of the vehicle and act appropriately in order to ensure safety.

⚠ WARNING

■ **Situations in which the dynamic radar cruise control should not be used**

Do not use the dynamic radar cruise control in the following situations. As the system will not be able to provide appropriate control, using it may lead to an accident resulting in death or serious injury.

- Roads where there are pedestrians, cyclists, etc.
- When driving on a highway or expressway entrance or exit
- When the approach warning sounds frequently
- Situations in which the sensors may not operate properly: →P.264
- Situations in which the lane may not be detected: →P.265

Basic functions

A Constant speed cruising:
When there are no vehicles ahead
The vehicle drives at the speed set by the driver.

If the set vehicle speed is exceeded while driving down a hill, the set vehicle speed display will blink and a buzzer will sound.

B Deceleration and follow-up cruising

When a preceding vehicle driving slower than the set vehicle speed is detected

When a vehicle is detected driving ahead of your vehicle, the vehicle automatically decelerates and if a greater reduction in vehicle speed is necessary, the brakes are applied (the stop lights will come on at this time). The vehicle is controlled to maintain the vehicle-to-vehicle distance set by the driver, in accordance with changes in the speed of the preceding vehicle. If vehicle deceleration is not sufficient and the vehicle approaches the vehicle ahead, the approach warning will sound.

C Acceleration

When there are no longer any preceding vehicles driving slower than the set vehicle speed

The vehicle accelerates until the set vehicle speed is reached and then resumes constant speed cruising.

D Starting off:

If a preceding vehicle stops, the vehicle will also stop (controlled stop). After the preceding vehicle starts off, pressing the “RES” switch or depressing the accelerator pedal will resume follow-up cruising (start off operation). If a start off operation is not performed, the controlled stop will continue.

While driving on a highway or expressway, if a preceding vehicle stops, your vehicle will stop accordingly. On some highways and expressways, if the system determines that the preceding vehicle starts off within approximately 3 minutes of stopping, a buzzer will sound and a message will be displayed on the multi-information display to notify the driver, and your vehicle will start off accordingly following the preceding vehicle. (Extended resume time)

System components

■ Meter display

- A Multi-information display
- B Set vehicle speed
- C Indicators
- Switches

- A Driving assist switch
- B “+” switch/“RES” switch
- C Driving assist mode select switch
- D Vehicle-to-vehicle distance switch
- E Cancel switch
- F “-” switch

Using the dynamic radar cruise control

- **Setting the vehicle speed**
- 1 Press the driving assist mode select switch to select dynamic radar cruise control. The dynamic radar cruise control

indicator will illuminate.

- 2 Using the accelerator pedal, accelerate or decelerate to the desired vehicle speed (approximately 20 mph [30 km/h] or more), and press the driving assist switch to set the set vehicle speed.

The set vehicle speed will be displayed on the multi-information display.

The vehicle speed at the moment the switch is released will be the set vehicle speed.

- **Adjusting the set vehicle speed**
- Adjusting the set vehicle speed using the switches

To change the set vehicle speed, press the “+” switch or “-” switch until the desired speed is displayed.

- 1 Increase set vehicle speed
- 2 Decrease set vehicle speed

Short press adjustment: Press the switch

Long press adjustment: Press and hold the switch until the desired set vehicle speed is reached.

The set vehicle speed will increase or decrease as follows:

► For U.S.A.

Short press adjustment: Increases or decreases by 1 mph (1.6 km/h) each time the switch is pressed

Long press adjustment: Increases or decreases in 1 mph (1.6 km/h) increments continuously while the switch is pressed and held

► Except for U.S.A.

Short press adjustment: By 1 km/h (0.6 mph) or 1 mph (1.6 km/h) each time the switch is pressed

Long press adjustment: Increases or decreases in 5 km/h (3.1 mph) or 5 mph (8 km/h) increments continuously while the switch is pressed and held

■ **Increasing the set vehicle speed using the accelerator pedal**

- 1 Depress the accelerator pedal to accelerate the vehicle to the desired vehicle speed.
- 2 Press the “+” switch.

■ **Canceling/resuming control**

- 1 Press the cancel switch or driving assist switch to cancel control.

Control will also be canceled if the brake pedal is depressed. (If the vehicle has been stopped by system control, depressing the brake pedal will not cancel control.)

- 2 Press the “RES” switch to resume control.

■ **Changing the vehicle-to-vehicle distance**

Each time the switch is pressed, the vehicle-to-vehicle distance setting will change as follows:

If a preceding vehicle is detected, the preceding vehicle mark **A** will be displayed.

Illustration Number	Vehicle-to-vehicle distance	Approximate Distance (Vehicle Speed: 60 mph [100 km/h])
1	Extra long	Approximately 200 ft. (60 m)
2	Long	Approximately 145 ft. (45 m)
3	Medium	Approximately 100 ft. (30 m)
4	Short	Approximately 85 ft. (25 m)

The actual vehicle-to-vehicle distance varies in accordance with the vehicle speed. Also, when the vehicle is stopped by system control, it will be stopped at a certain distance from the preceding vehicle, depending on the situation, regardless of the setting.

Operating conditions

- D shift position is selected.
- The desired set speed can be set when the vehicle speed is approximately 20 mph (30 km/h) or more.
- If the vehicle speed is set while driving at below approximately 20 mph (30 km/h), the set vehicle speed will be approximately 20 mph (30 km/h).
- If the vehicle speed is set while driving at a speed that exceeds the system's upper limit, the set

vehicle speed will be the system's upper limit.

Accelerating after setting the vehicle speed

As with normal driving, acceleration can be performed by depressing the accelerator pedal. After accelerating, the vehicle will return to the set vehicle speed. However, while in vehicle-to-vehicle distance control mode, the vehicle speed may decrease to below the set vehicle speed in order to maintain the distance from the preceding vehicle.

When the vehicle is stopped by system control during follow-up cruising

- When the "RES" switch is pressed while the vehicle is stopped by system control, if the preceding vehicle starts off within approximately 3 seconds, follow-up cruising will resume.
- If the preceding vehicle starts off within approximately 3 seconds of the vehicle being stopped by system control, follow-up cruising will resume.

Automatic cancellation of vehicle-to-vehicle distance control mode

In the following situations, vehicle-to-vehicle distance control mode will be canceled automatically:

- When the brake control or output restriction control of a driving support system operates (For example: Pre-Collision System, drive-start control)
- When the shift position is in Br mode
- When the parking brake has been operated
- When the vehicle is stopped by system control on a steep incline
- When any of the following are detected while the vehicle is stopped by system control:
 - The driver's seat belt is unfastened

- tened
- The driver's door is opened
- Approximately 3 minutes have elapsed since the vehicle was stopped

The parking brake may be activated automatically.

- Situations in which some or all of the functions of the system cannot operate: →P.265

■ Dynamic radar cruise control system warning messages and buzzers

For safe use: →P.259

■ Preceding vehicles that the sensor may not detect correctly

In the following situations, depending on the conditions, if the system cannot provide sufficient deceleration or acceleration is necessary, operate the brake pedal or accelerator pedal.

As the sensor may not be able to correctly detect these types of vehicles, the approach warning (→P.312) may not operate.

- When a vehicle cuts in front of your vehicle or changes lanes away from your vehicle extremely slowly or quickly
- When changing lanes
- When a preceding vehicle is driving at a low speed
- When a vehicle is stopped in the same lane as the vehicle
- When a motorcycle is traveling in the same lane as the vehicle

■ Conditions under which the system may not operate correctly

In the following situations, operate the brake pedal (or accelerator pedal, depending on the situation) as necessary.

As the sensor may not be able to correctly detect a vehicle, the system may not operate properly.

- When a preceding vehicle brakes suddenly
- When changing lanes at low speeds, such as in a traffic jam

■ Conditions for extended resume time

Extended resume time is activated when all of the following conditions are satisfied:

- The connected service that Toyota provides is subscribed to. Contact your Toyota dealer for details.
- The vehicle is driving on a vehicle-only road, such as an expressway.
- There is a preceding vehicle and the system is able to detect it.
- No vehicle interruptions occur.
- The preceding vehicle has not been replaced.
- Clearance sonar and FCTA are not detecting the object in front of you.
- The driver monitor judges that the driver is looking forward.
- The steering wheel has not been operated.
- The brake pedal has not been operated.

Approach warning

In situations where the vehicle approaches a preceding vehicle and the system cannot provide sufficient deceleration, such as if a vehicle cuts in front of the vehicle, a warning display will flash and a buzzer will sound to alert the driver. Depress the brake pedal to ensure appropriate vehicle-to-vehicle distance.

■ Warnings may not occur when

In the following situations, the warning may not operate even though the vehicle-to-vehicle distance is short.

- When the preceding vehicle is traveling at the same speed or faster than your vehicle
- When the preceding vehicle is traveling at an extremely low speed
- Immediately after the vehicle speed has been set
- When the accelerator pedal is depressed

Curve speed reduction function

When a curve is detected, the vehicle speed will begin being reduced. When the curve ends, the vehicle speed reduction will end.

Depending on the situation, the vehicle speed will then return to the set vehicle speed.

In situations where vehicle-to-vehicle distance control needs to operate, such as when a preceding vehicle cuts in front of your vehicle, the curve speed reduction function will be canceled.

■ Situations in which the curve speed reduction function may not operate

In situations such as the following, the curve speed reduction function may not operate:

- When the vehicle is being driven around a gentle curve
- When the accelerator pedal is being depressed
- When the vehicle is being driven around an extremely short curve

Driver Monitor support function

While a warning of the driver monitor is being displayed, the vehicle acceleration will be restrained.

When the warning of the driver monitor disappears, the restrained acceleration control will end.

Support for lane change

If your vehicle is being driven at approximately 50 mph (80 km/h) or more and a lane change to the passing lane is performed, when the turn signal lever is operated and the lane is

changed, the vehicle will accelerate up to the set speed to assist in overtaking.

The system's recognition of which lane is the passing lane may be based solely on the location of the steering wheel in the vehicle (left-hand drive/right-hand drive). If the vehicle is driven in a location where the passing lane is on the opposite side of that where the vehicle was originally sold, the vehicle may accelerate when the turn signal lever is operated away from the passing lane. (e.g. The vehicle was manufactured for a right-hand traffic location, but is being driven in a left-hand traffic location. The vehicle may accelerate when the turn

signal lever is operated to the right.)

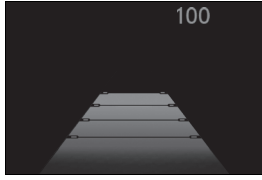

If your vehicle is being driven at approximately 50 mph (80 km/h) or more and the lane is changed to that with a vehicle traveling slower than your vehicle, when the turn signal lever is operated the vehicle will gradually decelerate to assist in changing lanes.

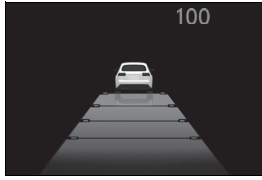

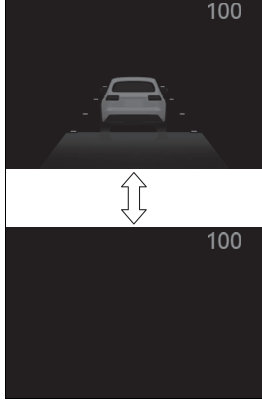

Changing Dynamic radar cruise control settings

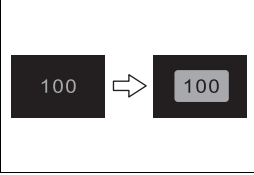

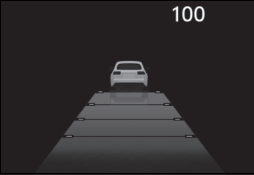

The settings of Dynamic radar cruise control can be changed through customize settings. (→P.674)

Display and system operation state

The operating state of Dynamic radar cruise control is indicated.

Indicator	Multi-information display		Situation
 White		Vehicle-to-vehicle distance setting: Gray	Dynamic radar cruise control being OFF
 Green		Vehicle-to-vehicle distance setting: Blue Set vehicle speed: Green	Constant speed cruising

Indicator	Multi-information display	Situation
 <p>Green</p>	 <p>Vehicle-to-vehicle distance setting: Blue Set vehicle speed: Green Preceding vehicle: White</p>	<p>Follow-up cruising</p>
 <p>Green</p>	 <p>Vehicle-to-vehicle distance setting: Orange flashing Set vehicle speed: Green Preceding vehicle: Orange flashing</p>	<p>Approach warning</p>
 <p>Green</p>	 <p>Vehicle-to-vehicle distance setting: Gray Set vehicle speed: White Preceding vehicle: Gray</p>	<p>Accelerating with the accelerator pedal</p>

Indicator	Multi-information display		Situation
 <p data-bbox="389 577 462 600">Green</p>		<p data-bbox="815 506 1038 600">Set vehicle speed: Green in reverse display</p>	<p data-bbox="1075 506 1225 600">Set vehicle speed being exceeded</p>
 <p data-bbox="389 813 462 835">Green</p>		<p data-bbox="815 663 1031 757">Vehicle-to-vehicle distance setting: Gray</p> <p data-bbox="815 768 1038 835">Set vehicle speed: White</p> <p data-bbox="815 846 1038 902">Preceding vehicle: Gray</p>	<p data-bbox="1075 734 1193 835">Vehicle in controlled stop</p>

Cruise control*

*: Vehicles with Toyota Teammate Advanced Drive, refer to “Toyota Teammate Advanced Drive OWNER’S MANUAL”.

The vehicle can be driven at a set speed even if the accelerator pedal is not depressed.

Use the cruise control only on highways and express-ways.

WARNING

■ For safe use

- Driving safely is solely the responsibility of the driver. Therefore, do not overly rely on this system. The driver is solely responsible for paying attention to the vehicle’s surroundings and driving safely.
- Set the speed appropriately according to the speed limit, traffic flow, road conditions, weather conditions, etc. The driver is responsible for confirming the set speed.

■ Situations in which cruise control should not be used

Do not use the cruise control in the following situations. As the system will not be able to provide appropriate control, using it may lead to an accident resulting in death or serious injury.

- On roads with sharp bends
- On winding roads
- On slippery roads, such as those covered with rain, ice or snow

- On steep downhill, or where there are sudden changes between sharp up and down gradients
Vehicle speed may exceed the set speed when driving down a steep hill.

- When it is necessary to disable the system: →P.259

System components

■ Meter display

A Set vehicle speed

B Cruise control indicator

■ Switches

A Driving assist switch

B “+” switch/“RES” switch

C Driving assist mode select switch

D Cancel switch

E “-” switch

Using the cruise control

■ **Setting the vehicle speed**

- 1 Press the driving assist mode select switch to select cruise control.

The cruise control indicator will illuminate.

- 2 Using the accelerator pedal, accelerate to the desired vehicle speed (approximately 20 mph [30 km/h] or more), and press the driving assist switch to set the set vehicle speed.

The vehicle speed at the moment the switch is released will be the set vehicle speed.

■ **Adjusting the set vehicle speed**

- Adjusting the set vehicle speed using the switches

To change the set vehicle speed, press the “+” or “-” switch until the desired speed is displayed.

- 1 Increase set vehicle speed
- 2 Decrease set vehicle speed

The set vehicle speed will increase or decrease as follows:

Fine adjustment: By 1 mph (1.6 km/h) or 1 km/h (0.6 mph) each time the switch is pressed

Large adjustment: Increases continuously while the switch is pressed and held

- Increasing the set vehicle speed using the accelerator pedal

- 1 Depress the accelerator pedal to accelerate the vehicle to the desired vehicle speed.
- 2 Press the “+” switch.

■ **Canceling/resuming control**

- 1 Press the cancel switch or driving assist switch to cancel control.

Control will also be canceled if the brake pedal is depressed.

- 2 Press the “RES” switch to resume control.

■ **Automatic cancellation of the cruise control**

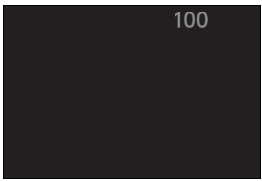

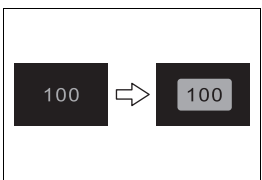

In the following situations, the cruise control will be canceled automatically:

- When the vehicle speed drops approximately 10 mph (16 km/h) or more below the set vehicle speed
- When the vehicle speed drops below approximately 20 mph (30 km/h)
- When the brake control or output restriction control of a driving support system operates (For example: PCS, drive-start control)
- When the shift position is in Br mode
- When the parking brake has been operated
- Situations in which some or all of the functions of the system cannot operate: →P.265

Display and system operation state

The operating state of cruise control is indicated.

Indicator	Multi-information display		Situation
 White		Blank	Cruise control being OFF

Indicator	Multi-information display		Situation
 <p>Green</p>			<p>Set vehicle speed: Green</p> <p>Constant speed cruising</p>
 <p>Green</p>			<p>Set vehicle speed: Green in reverse display</p> <p>Set vehicle speed being exceeded</p>

Emergency Driving Stop System*

*: Vehicles without Toyota Team-mate Advanced Drive

The emergency driving stop system is a system which automatically decelerates and stops the vehicle within its lane if the driver becomes unable to continue driving the vehicle, such as if they have suffered a medical emergency, etc.

During LTA (Lane Tracing Assist) control, if the system does not detect driving operations, such as if the driver is not holding the steering wheel, and determines the driver is not responsive, the vehicle will be decelerated and stopped within its current lane to help avoid a collision or reduce the impact of a collision.

The vehicle will also decelerate/stop during the Traffic Jam Assist controls, when no driver's response to the vehicle's warning to hold the steering wheel is detected.

WARNING

■ For safe use

- Driving safely is solely the responsibility of the driver. Pay careful attention to the surrounding conditions in order to ensure safe driving. The emergency driving stop system is designed to provide support in an emergency where it is difficult for the driver to continue driving, such as if they have had a medical emergency. It is not designed to support driving while drowsy or in poor physical health, or inattentive driving.
- Although the emergency driving stop system is designed to decelerate the vehicle within its lane to help avoid or help reduce the impact of a collision if the system determines that it is difficult for the driver to continue driving, its effectiveness may change according to various conditions. Therefore, it may not always be able to achieve the same level of performance. Also, if the operating conditions are not met, this function will not operate.
- After the emergency driving stop system operates, if driving becomes possible again, immediately begin driving again or, if necessary, park the vehicle on the shoulder of the road and set a warning reflector and flare to warn other drivers of your stopped vehicle.
- After this system operates, passengers should attend to the driver as necessary and take appropriate hazard prevention measures, such as moving to a place where safety can be ensured, such as the shoulder of the road or behind a guard-rail.

⚠ WARNING

- This system detects the condition of the driver through the operation of the steering wheel. This system may operate if the driver is aware but intentionally and continuously does not operate the vehicle. Also, the system may not operate if it cannot determine that the driver is not responsive, such as if they are leaning on the steering wheel.
- Situations in which the driver monitor may not operate properly
→P.266

Summary of the system

Operation of this system is separated into 4 control states. Through control state “warning phase 1” and “warning phase 2”, the system determines if the driver is aware and responsive while outputting a warning and controlling the vehicle speed. If the system determines the driver is not responsive, it will operate in control state “deceleration stop phase” and “stop hold phase” and decelerate and stop the vehicle. It will then operate continuously in “stop hold phase”.

■ Operating conditions

This system operates when all of the following conditions are met:

- When the LTA is on
- Or during the Traffic Jam Assist controls
- When the vehicle speed is

approximately 30 mph (50 km/h) or more

During the Traffic Jam Assist controls, the system may operate at below 30 mph (50 km/h).

■ Operation cancelation conditions

In the following situations, system operation will be canceled:

- When LTA control has been canceled (the LTA switch has been pressed, etc.)
- When the dynamic radar cruise control has been canceled
- When driver operations are detected (the steering wheel is held, the brake pedal, accelerator pedal, parking brake, hazard light switch, or turn signal lever is operated)
- When the driving assist switch is pressed while in the stop and hold phase
- When the power switch has been turned from ON to OFF
- Situations in which some or all of the functions of the system cannot operate: →P.265

■ LTA control when operation is canceled

When emergency driving stop system operation is canceled, LTA control may also be canceled.

Warning phase 1

If driving operations are not detected after the hands off steering wheel warning operates, a buzzer will sound intermittently and a message will be displayed to warn the driver, and the system will judge if the driver is responsive or not. If driving operations, such as holding the

steering wheel, are not performed within a certain amount of time, the system will enter warning phase 2.

Depending on the type of detection of the driver's unresponsiveness, the system may skip warning phase 1 and start the control of warning phase 2.

Warning phase 2

After entering warning phase 2, a buzzer will sound in short intervals and a message will be displayed to warn the driver, and the vehicle will slowly decelerate. If driving operations, such as holding the steering wheel, are not performed within a certain amount of time, the system will determine that the driver is not responsive and enter the deceleration stop phase.

The audio system will be muted until the driver becomes responsive.

When the vehicle is decelerating, the brake lights may illuminate, depending on the road conditions, etc.

Deceleration stop phase

After entering the deceleration stop phase, a buzzer will sound continuously and a message will be displayed to warn the driver, and the vehicle will slowly decelerate and stop. After the vehicle

stops, the system will enter the stop and hold phase.

Stop hold phase

After the vehicle is stopped, the parking brake will be applied automatically. After entering the stop and hold phase, the buzzer will continue sounding continuously and the emergency flashers (hazard lights) will flash to warn other drivers of the emergency.

Restricted functions after the operation is canceled

After shifting to the deceleration stop phase, the following functions will not be available until the fuel cell system is re-started even though the emergency driving stop system is canceled:

- LTA
- LCA
- Traffic Jam Assist

Traffic Jam Assist*

*: Vehicles with Toyota Teammate Advanced Drive, refer to “Toyota Teammate Advanced Drive OWNER’S MANUAL”.

Function Outline

Traffic Jam Assist is a system which, through confirmation of the conditions by the driver, provides lane keeping, accelerating/decelerating, stopping, and starting off support on some highways and expressways. Also, in an emergency, the system can decelerate and stop, to help avoid a collision or help reduce the impact of a collision.

Sensors that support the Traffic Jam Assist

- Sensors which detect the surrounding conditions (→P.261)
- Sensors which detect the driver condition (→P.261)

■ Situations in which some or all of the functions of the system cannot operate

→P.261

■ Changes in brake operation sound and pedal response

→P.266

■ Situations in which the driver monitor may not operate properly

→P.266

Emergency Driving Stop System

→P.321

Extended resume time of Dynamic radar cruise control

→P.312

Traffic Jam Assist Function

The Traffic Jam Assist function, through confirmation of the conditions by the driver, provides lane keeping, accelerating/decelerating and stopping support on some highways and expressways.

This function is operable when all of the operation conditions are met.

When this function is operating, it is possible to take your hands off of the steering wheel. (→P.327)

Before using the Traffic Jam Assist function, familiarize yourself with the content of the dynamic radar cruise control and the LTA (Lane Tracing Assist).

Make sure that the driver steers the vehicle when entering a service area/parking area or toll gate, or when changing lanes.

Driver monitor camera recording

When the operation of Traffic Jam Assist is started, the following message will be displayed:

- “Allow Driver Monitor Camera Recording?”

When recording is approved, the system records images of the area around the driver in certain crash or near crash-like situations, such as an SRS airbag being deployed or the vehicle hitting an object on the road. (→P.9)

WARNING

■ For safe use

- Driving safely is solely the responsibility of the driver. Do not overly rely on this system, and pay careful attention to the surrounding conditions in order to ensure safe driving.
- The Traffic Jam Assist function is not an automated driving system. This function provides the driver with information and driving assistance according to the road shape and conditions, traffic conditions, and the condition of the driver themselves. Always pay careful attention to the surrounding conditions as use of the system is the responsibility of the driver.
- Depending on the condition of the surrounding area, the road, or the driver, the Traffic Jam Assist function may not operate or operation may be suspended. Also, it may not always be able to achieve the same level of performance. Read the operating conditions of the function carefully. Do not overly rely on this function and always drive carefully.
- As the recognition performance and control performance of the Traffic Jam Assist function are limited, driver operation is necessary to ensure safety while the system is operating. Also, the steering assist of this system is designed to operate only for slow steering operations during a traffic jam. While this function is operating, the lane deviation control function of the LDA will not operate. If, for some reason, the vehicle is about to deviate the lane, it is the driver's responsibility to drive properly.
- Even if Traffic Jam Assist is operating properly, the surrounding conditions as recognized by the driver and detected by the system may differ. Therefore, it is necessary for the driver to pay attention, assess risks, and ensure safety. Overreliance on this system to drive the vehicle safely may lead to an accident resulting in death or serious injury.
- While the Traffic Jam Assist function is operating, as driver operation may become necessary, the driver must ensure they have clear visibility of their surroundings.

 **WARNING**

- In certain situations, a message urging the driver to hold the steering wheel may be displayed by the Traffic Jam Assist function. In this case, hold the steering wheel and drive the vehicle manually to ensure safety.

- The Traffic Jam Assist function cannot detect the following objects. Operate the steering wheel, accelerator pedal, or brake pedal as necessary to avoid a collision. As the function will not be able to provide appropriate control, using it may lead to an accident resulting in death or serious injury.

- Objects on the road surface
- Vehicles outside of a lane (such as on the shoulder of the road)
- Potholes, cracks, ruts, or other road damage
- Road construction zones
- Vehicles running in parallel with your vehicle or nearby walls
- Animals

■ **Situations in which Traffic Jam Assist Function should not be used**

Do not use Traffic Jam Assist Function in situations such as the following. As the system will not be able to provide appropriate control, using it may lead to an accident resulting in death or serious injury.

- When it is necessary to disable the system
→P.259

- Situations in which the sensors may not operate properly

→P.264

- Situations in which the lane may not be detected

→P.265

■ **Situations in which the function may not operate properly**

In situations such as the following, the Traffic Jam Assist function may not operate properly. Manually operate the vehicle as necessary.

- When a sensor is splashed by water
- When the ambient temperature is high or low
- When a vehicle cuts in front of your vehicle
- When another lane merges into the lane in the same traveling direction as your vehicle
- When driving in low visibility condition
- When the vehicle posture is changing
- When the traction on the road surface differs greatly between the left and right side tires
- When driving on an expressway with no median strips or when driving on an expressway equipped with temporary median markers, such as poles.
- When there is a significant difference in speed between your vehicle and the other vehicle
- The map data has not been updated properly.

**WARNING****■ To prevent malfunction of the radar sensors**

→P.261

■ To prevent malfunction of the front camera

→P.262

■ Front camera installation area on the windshield

→P.263

■ Operating conditions of the function

This function is operable when all of the following conditions are met:

- The system detects lane lines and the path of preceding or surrounding vehicles.
- The dynamic radar cruise control and the lane tracing assist are operating.
- The turn signal lever is not being operated.
- The vehicle is not being driven around a sharp curve.
- The vehicle is being driven in the center of a lane.
- The driver monitor camera is detecting that the driver is facing front of the vehicle.
- The vehicle is driving in traffic jam on a highway or expressway at approximately 25 mph (40 km/h) or less. (In some situations, such as when a traffic jam starts, this function may be operational at approximately 20 mph [30 km/h] or less.)
- Safety Connect is being subscribed to.
- The driver's door is closed.
- The driver's seat belt is fastened.
- Customized setting of the Traffic Jam Assist is not set to off.

- Functions and components composing the system are in proper condition.

- Customized setting of the PCS (Pre-Collision System) is not set to off.

- Customized setting of the dynamic radar cruise control (re-start time extension) is not set to off.

■ Temporary cancelation of the function

- When the operating conditions are no longer met, a function may be temporarily canceled. However, when the operation conditions are met again, operation of the function will automatically be restored.

- If the operating conditions of a function are no longer met while the function is operating, a buzzer may sound with a display to indicate that the function has been temporarily canceled. If no driver's responses to the indication are detected, the driver emergency stop assist function may operate. For types of display and action to be taken, see the page mentioned below. (→P.328)

■ Driving operations during controlled driving:

- Accelerator pedal

As with normal driving, acceleration can be performed by depressing the accelerator pedal. When the accelerator pedal is depressed at approximately 10 km/h (6 mph) or more, this function will be canceled.

- Brake pedal

As with normal driving, deceleration can be performed by depressing the brake pedal. However, controlled driving will be cancelled.

- Steering wheel

As with normal driving, the steering wheel can be operated. If the steering wheel is operated more than a

certain amount, controlled driving will be cancelled.

■ **When a warning message is displayed**

- “Traffic Jam Asst System Malfunction Visit Your Dealer”

The Traffic Jam Assist function may not be operating properly.

- “Traffic Jam Asst Unavailable Stop Assist Activated”

The system temporarily cannot be used as the driver emergency stop assist function has operated.

Changing Traffic Jam Assist settings

- The setting of Traffic Jam Assist can be enabled/disabled through a customize setting. (→P.674)
- The setting of driver monitor camera recording can be enabled/disabled through a customize setting. (→P.674)

Displays and system operation

The following displays indicate the operating status of the Traffic Jam Assist function:

Display	Status	Action to be taken
	Traffic Jam Assist function is operating	—
 Gray	Traffic Jam Assist function is about to end	Hold the steering wheel.
 Orange	Traffic Jam Assist function has ended	Hold the steering wheel.
 Red	Operation of either or both of dynamic radar cruise control /LTA (Lane Tracing Assist) ended	Manually operate the steering wheel immediately.

Display	Status	Action to be taken
 <p>Yellow</p>	<p>Indicates that driving actions are necessary to cope with cut-in or other behavior of surrounding vehicles</p>	<p>The driver must operate the steering wheel, accelerator pedal and brake pedal in accordance with the surrounding environment.</p>
	<p>Indicates that the recording function of the driver monitor camera is operational (Blinking of this icon indicates that recording is undergoing, and constant illumination indicates ready for recording.)</p>	<p>—</p>

BSM (Blind Spot Monitor) (Vehicles without Toyota Teammate Advanced Drive)*

*: If equipped

The Blind Spot Monitor is a system that uses rear side radar sensors installed on the inner side of the rear bumper on the left and right side to assist the driver in confirming safety when changing lanes.

⚠ WARNING

■ **Cautions regarding the use of the system**

- The driver is solely responsible for safe driving. Always drive safely, taking care to observe your surroundings.
- The Blind Spot Monitor is a supplementary function which alerts the driver that a vehicle is in a blind spot of the outside rear view mirrors or is approaching rapidly from behind into a blind spot. Do not overly rely on the Blind Spot Monitor. As the function cannot judge if it is safe to change lanes, over reliance could lead to an accident resulting in death or serious injury. As the system may not function correctly under certain conditions, the driver's own visual confirmation of safety is necessary.

System components

A Meter control switches

Turning the Blind Spot Monitor on/off.

B Outside rear view mirror indicators

When a vehicle is detected in a blind spot of the outside rear view mirrors or approaching rapidly from behind into a blind spot, the outside rear view mirror indicator (→P.110) on the detected side will illuminate. If the turn signal lever is operated toward the detected side, the outside rear view mirror indicator will flash and a buzzer will sound.

C Driving assist information indicator

Illuminates when the Blind Spot Monitor is turned off. At this time, a message will be displayed on the multi-information display.

■ **Outside rear view mirror indicator visibility**

In strong sunlight, the outside rear view mirror indicator may be difficult to see.

■ **Buzzer**

If the volume setting of the audio system is high or the surrounding area is loud, it may be difficult to

hear the buzzer.

■ Customization

Some functions can be customized.
(→P.686)

■ Certification

→P.749

⚠ WARNING

■ To ensure the system can operate properly

Blind Spot Monitor sensors are installed behind the left and right sides of the rear bumper respectively. Observe the following to ensure the Blind Spot Monitor can operate correctly.

- Keep the sensors and the surrounding areas on the rear bumper clean at all times.

If a sensor or its surrounding area on the rear bumper is dirty or covered with snow, the Blind Spot Monitor may not operate and a warning message will be displayed. In this situation, clear off the dirt or snow and drive the vehicle with the operation conditions of the BSM function (→P.333) satisfied for approximately 10 minutes. If the warning message does not disappear, have the vehicle inspected by your Toyota dealer.

- Do not attach accessories, stickers (including transparent stickers), aluminum tape, etc., to a sensor or its surrounding area on the rear bumper.
- Do not paint the surrounding area of a sensor on the rear bumper.
- Do not subject a sensor or its surrounding area on the rear bumper to a strong impact. If a sensor is moved even slightly off position, the system may malfunction and vehicles may not be detected correctly. In the following situations, have your vehicle inspected by your Toyota dealer.
 - A sensor or its surrounding area is subject to a strong impact.
 - If the surrounding area of a sensor is scratched or dented, or part of them has become disconnected.
- Do not disassemble the sensor.
- Do not modify the sensor or surrounding area on the rear bumper.
- If a sensor or the rear bumper needs to be removed/installed or replaced, contact your Toyota dealer.
- The sensors are likely to be affected by paint on the rear bumper. If the rear bumper is not repaired correctly, the Blind Spot Monitor may not operate with a warning message displayed. If any paint repair is needed, contact your Toyota dealer.

Turning the Blind Spot Monitor on/off

The Blind Spot Monitor can be enabled/disabled through a customize setting. (→P.686)

When the Blind Spot Monitor is

off, the driving assist information indicator (→P.110) will illuminate and a message will be displayed on the multi-information display.

Each time the power switch is turned to ON, the Blind Spot Monitor is enabled.

Blind Spot Monitor operation

■ **Objects that can be detected while driving**

The Blind Spot Monitor uses rear side radar sensors to detect the following vehicles traveling in adjacent lanes and advises the driver of the presence of such vehicles via the indicators on the outside rear view mirrors.

- A** Vehicles that are traveling in areas that are not visible using the outside rear view mirrors (the blind spots)
- B** Vehicles that are approaching rapidly from behind in areas that are not visible using the outside rear view mirrors (the blind spots)

■ **Detection range while driving**

The areas that vehicles can be detected in are outlined below.

The range of each detection area is:

- A** Approximately 1.6 ft. (0.5 m) to 11.5 ft. (3.5 m) from either side of the vehicle*¹
- B** Approximately 3.3 ft. (1 m) forward of the rear bumper*²
- C** Approximately 9.8 ft. (3 m) from the rear bumper
- D** Approximately 9.8 ft. (3 m) to 230 ft. (70 m) from the rear bumper*³

*¹: The area between the side of the vehicle and 1.6 ft. (0.5 m) from the side of the vehicle cannot be detected.

*²: While the vehicle is to being overtaken, up to approximately 9.8 ft. (3 m) forward of the rear bumper will be detected.

*³: The greater the difference in speed between your vehicle and the detected vehicle is, the farther away the vehicle will be detected, causing the outside rear view mirror indicator to illuminate or flash.

■ **The Blind Spot Monitor linked function**

The LDA (Lane Departure Alert) has a function that uses information of detected vehicles driving in an adjacent lane. For details about the function and its operating conditions, P.289.

■ **The Blind Spot Monitor is operational when**

The Blind Spot Monitor is operational when all of the following conditions are met:

- The power switch is in ON.
- The Blind Spot Monitor is on.
- The shift position is in a position other than R.
- The vehicle speed is approximately 7 mph (10km/h) or more.

■ **The Blind Spot Monitor will detect a vehicle when**

The Blind Spot Monitor will detect a vehicle present in the detection area in the following situations:

- A vehicle in an adjacent lane overtakes your vehicle.
- You overtake a vehicle in an adjacent lane slowly.

- Another vehicle enters the detection area when it changes lanes.

■ **Situations in which the Blind Spot Monitor cannot detect vehicles.**

The Blind Spot Monitor cannot detect the following vehicles and other objects:

- Small motorcycles, bicycles, pedestrians, etc.*
- Vehicles traveling in the opposite direction
- Guardrails, walls, signs, parked vehicles and similar stationary objects*
- Following vehicles that are in the same lane*
- Vehicles traveling 2 lanes away from your vehicle*
- Vehicles which are being overtaken rapidly by your vehicle*

*: Depending on the conditions, detection of a vehicle and/or object may occur.

■ Conditions in which a buzzer may not sound

In situations such as the following, while the turn signal lever is being operated, the indicator will flash but a buzzer may not sound.

- When a second vehicle is detected while the turn signal lever is being held
- When overtaking a vehicle in the adjacent lane at a much higher speed than it*

*: Depending on the situations, a buzzer may sound.

■ Conditions under which the system may not function correctly

- The Blind Spot Monitor may not detect vehicles correctly in the following situations:
 - When the sensor is misaligned due to a strong impact to the sensor or its surrounding area
 - When mud, snow, ice, a sticker, etc., is covering the sensor or surrounding area on the rear bumper
 - When driving on a road surface that is wet with standing water during bad weather, such as heavy rain, snow, or fog
 - When multiple vehicles are approaching with only a small gap between each vehicle
 - When the distance between your vehicle and a following vehicle is short
 - When there is a significant difference in speed between your vehicle and the vehicle that enters the detection area
 - When the difference in speed between your vehicle and another vehicle is changing
 - When a vehicle enters a detection area traveling at about the same speed as your vehicle
 - As your vehicle starts from a stop,

a vehicle remains in the detection area

- When driving up and down consecutive steep inclines, such as hills, dips in the road, etc.
- When driving on roads with sharp bends, consecutive curves, or uneven surfaces
- When vehicle lanes are wide, or when driving on the edge of a lane, and the vehicle in an adjacent lane is far away from your vehicle
- When an accessory (such as a bicycle carrier) is installed to the rear of the vehicle
- When there is a significant difference in height between your vehicle and the vehicle that enters the detection area
- Immediately after the Blind Spot Monitor is turned on
- When towing with the vehicle
- Instances of the Blind Spot Monitor unnecessarily detecting a vehicle and/or object may increase in the following situations:
 - When the sensor is misaligned due to a strong impact to the sensor or its surrounding area
 - When the distance between your vehicle and a guardrail, wall, etc., that enters the detection area is short
 - When driving up and down consecutive steep inclines, such as hills, dips in the road, etc.
 - When vehicle lanes are narrow, or when driving on the edge of a lane, and a vehicle traveling in a lane other than the adjacent lanes enters the detection area
 - When driving on roads with sharp bends, consecutive curves, or uneven surfaces
 - When the tires are slipping or spinning
 - When the distance between your vehicle and a following vehicle is short
 - When an accessory (such as a bicycle carrier) is installed to the rear of the vehicle
 - When towing with the vehicle

BSM (Blind Spot Monitor) (Vehicles with Toyota Teammate Advanced Drive)*

*: If equipped

The Blind Spot Monitor is a system that uses rear side radar sensors installed on the inner side of the rear bumper on the left and right side to assist the driver in confirming safety when changing lanes.

⚠ WARNING

■ Cautions regarding the use of the system

The driver is solely responsible for safe driving. Always drive safely, taking care to observe your surroundings.

The Blind Spot Monitor is a supplementary function which alerts the driver that a vehicle is in a blind spot of the outside rear view mirrors or is approaching rapidly from behind into a blind spot. Do not overly rely on the Blind Spot Monitor. As the function cannot judge if it is safe to change lanes, over reliance could lead to an accident resulting in death or serious injury.

As the system may not function correctly under certain conditions, the driver's own visual confirmation of safety is necessary.

System components

A Meter control switches

Turning the Blind Spot Monitor on/off.

B Outside rear view mirror indicators

When a vehicle is detected in a blind spot of the outside rear view mirrors or approaching rapidly from behind into a blind spot, the outside rear view mirror indicator on the detected side will illuminate. If the turn signal lever is operated toward the detected side, the outside rear view mirror indicator flashes.

■ Outside rear view mirror indicator visibility

In strong sunlight, the outside rear view mirror indicator may be difficult to see.

■ When “Blind Spot Monitor Unavailable See Owner’s Manual” is shown on the multi-information display

Ice, snow, mud, etc., may be attached to the rear bumper around the sensors. (→P.336) The system should return to normal operation after removing the ice, snow, mud, etc., from the rear bumper. Additionally, the sensors may not operate normally when driving in extremely hot or cold environments.

■ **When “Blind Spot Monitor Malfunction Visit Your Dealer” is shown on the multi-information display**

There may be a sensor malfunction of misaligned. Have the vehicle inspected by your Toyota dealer.

■ **Customization**

Some functions can be customized. (→P.686)

■ **Certification**

→P.749

! WARNING

■ **To ensure the system can operate properly**

Blind Spot Monitor sensors are installed behind the left and right sides of the rear bumper respectively. Observe the following to ensure the Blind Spot Monitor can operate correctly.

! WARNING

- Keep the sensors and the surrounding areas on the rear bumper clean at all times.

If a sensor or its surrounding area on the rear bumper is dirty or covered with snow, the Blind Spot Monitor may not operate and a warning message (→P.336) will be displayed. In this situation, clear off the dirt or snow and drive the vehicle with the operation conditions of the BSM function (→P.339) satisfied for approximately 10 minutes. If the warning message does not disappear, have the vehicle inspected by your Toyota dealer.

- Do not attach accessories, stickers (including transparent stickers), aluminum tape, etc., to a sensor or its surrounding area on the rear bumper.
- Do not subject a sensor or its surrounding area on the rear bumper to a strong impact. If a sensor is moved even slightly off position, the system may malfunction and vehicles may not be detected correctly. In the following situations, have your vehicle inspected by your Toyota dealer.
 - A sensor or its surrounding area is subject to a strong impact.

- If the surrounding area of a sensor is scratched or dented, or part of them has become disconnected.
- Do not disassemble the sensor.
- Do not modify the sensor or surrounding area on the rear bumper.
- If a sensor or the rear bumper needs to be removed/installed or replaced, contact your Toyota dealer.
- Do not paint the rear bumper any color other than an official Toyota color.

Turning the Blind Spot Monitor on/off

Use the meter control switches to turn on/off the function. (→P.144)

- 1 Press < or > to select .
- 2 Press ^ or v to select "BSM" and then press OK.

When the BSM function is disabled, the BSM OFF indicator (→P.138) illuminates. (Each time the power switch is turned off then changed to ON, the Blind Spot Monitor will be enabled automatically.)

Blind Spot Monitor operation

■ Vehicles that can be detected by the Blind Spot Monitor

The Blind Spot Monitor uses rear side radar sensors to detect the following vehicles traveling in adjacent lanes and advises the driver of the presence of such vehicles via the indicators on the outside rear view mirrors.

- A** Vehicles that are traveling in areas that are not visible using the outside rear view mirrors (the blind spots)
- B** Vehicles that are approaching rapidly from behind in areas that are not visible using the outside rear view mirrors (the blind spots)

■ The Blind Spot Monitor detection areas

The areas that vehicles can be detected in are outlined below.

The range of each detection area is:

- A** Approximately 1.6 ft. (0.5 m) to 11.5 ft. (3.5 m) from either side of the vehicle^{*1}
- B** Approximately 3.3 ft. (1 m) forward of the rear bumper
- C** Approximately 9.8 ft. (3 m) from the rear bumper
- D** Approximately 9.8 ft. (3 m) to 197 ft. (60 m) from the rear bumper^{*2}

^{*1}: The area between the side of the vehicle and 1.6 ft. (0.5 m) from the side of the vehicle cannot be detected.

^{*2}: The greater the difference in speed between your vehicle and the detected vehicle is, the farther away the vehicle will be detected, causing the outside rear view mirror indicator to illuminate or flash.

■ The Blind Spot Monitor is operational when

The Blind Spot Monitor is operational when all of the following conditions are met:

- The Blind Spot Monitor is on.
- The shift position is in a position other than R.
- The vehicle speed is greater than approximately 10 mph (16 km/h).

■ The Blind Spot Monitor will detect a vehicle when

The Blind Spot Monitor will detect a vehicle present in the detection area in the following situations:

- A vehicle in an adjacent lane overtakes your vehicle.
- You overtake a vehicle in an adjacent lane slowly.

- Another vehicle enters the detection area when it changes lanes.

■ Conditions under which the system will not detect a vehicle

The Blind Spot Monitor is not designed to detect the following types of vehicles and/or objects:

- Small motorcycles, bicycles, pedestrians, etc.*
- Vehicles traveling in the opposite direction
- Guardrails, walls, signs, parked vehicles and similar stationary objects*
- Following vehicles that are in the same lane*
- Vehicles traveling 2 lanes away from your vehicle*

- Vehicles which are being overtaken rapidly by your vehicle*

*: Depending on the conditions, detection of a vehicle and/or object may occur.

■ **Conditions under which the system may not function correctly**

- The Blind Spot Monitor may not detect vehicles correctly in the following situations:
 - When the sensor is misaligned due to a strong impact to the sensor or its surrounding area
 - When mud, snow, ice, a sticker, etc., is covering the sensor or surrounding area on the rear bumper
 - When driving on a road surface that is wet with standing water during bad weather, such as heavy rain, snow, or fog
 - When multiple vehicles are approaching with only a small gap between each vehicle
 - When the distance between your vehicle and a following vehicle is short
 - When there is a significant difference in speed between your vehicle and the vehicle that enters the detection area
 - When the difference in speed between your vehicle and another vehicle is changing
 - When a vehicle enters a detection area traveling at about the same speed as your vehicle
 - As your vehicle starts from a stop, a vehicle remains in the detection area
 - When driving up and down consecutive steep inclines, such as hills, dips in the road, etc.
 - When driving on roads with sharp bends, consecutive curves, or uneven surfaces
 - When vehicle lanes are wide, or when driving on the edge of a lane, and the vehicle in an adjacent lane is far away from your vehicle
 - When an accessory (such as a

- bicycle carrier) is installed to the rear of the vehicle
- When there is a significant difference in height between your vehicle and the vehicle that enters the detection area
- Immediately after the Blind Spot Monitor is turned on
- Instances of the Blind Spot Monitor unnecessarily detecting a vehicle and/or object may increase in the following situations:
 - When the sensor is misaligned due to a strong impact to the sensor or its surrounding area
 - When the distance between your vehicle and a guardrail, wall, etc., that enters the detection area is short
 - When driving up and down consecutive steep inclines, such as hills, dips in the road, etc.
 - When vehicle lanes are narrow, or when driving on the edge of a lane, and a vehicle traveling in a lane other than the adjacent lanes enters the detection area
 - When driving on roads with sharp bends, consecutive curves, or uneven surfaces
 - When the tires are slipping or spinning
 - When the distance between your vehicle and a following vehicle is short
 - When an accessory (such as a bicycle carrier) is installed to the rear of the vehicle

Safe Exit Assist (Vehicles without Toyota Teammate Advanced Drive only)

The safe exit assist is a system that uses rear side radar sensors installed on the inner side of the rear bumper to help occupants judge if an approaching vehicle or bicycle may collide with a door when exiting, to help reduce the possibility of a collision.

⚠ WARNING

■ **Cautions regarding the use of the system**

- The driver is solely responsible for safe driving. Always drive safely, taking care to observe your surroundings.
- The safe exit assist is a supplementary system that, when the vehicle is stopped, informs occupants of the existence of approaching vehicles and bicycles. As this system alone cannot be used to judge safety, over-reliance on this system may lead to an accident resulting in death or serious injury. In certain situations, this system may not function to its fullest extent. Therefore it is necessary for the occupants to visually check for safety directly and using the mirrors.

System components

A Multi-information display

Turning the safe exit assist on/off. If collision with a door is likely and the door is opened, the door will be displayed on the multi-information display. Also, if a door is opened when an outside rear view mirror indicator is illuminated, a buzzer will sound as a warning.

B Outside rear view mirror indicators

When a vehicle or bicycle which may collide with a door when opened is detected, the outside rear view mirror indicator (→P.110) on the detected side will illuminate. If the door on the detected side is opened, the outside rear view mirror indicator will blink.

C Driving assist information indicator

Illuminates when the safe exit assist is turned off. At this time, a message will be displayed on the multi-information display.

D Speakers

When the outside rear view mirror indicator blinks, the driver is informed through voice guidance that the system has operated. After

the notification through voice guidance is made, no more voice guidance notifications will be made again until the door is fully closed.

■ Outside rear view mirror indicator visibility

In strong sunlight, the outside rear view mirror indicator may be difficult to see.

■ Buzzer

If the volume setting of the audio system is high or the surrounding area is loud, it may be difficult to hear the buzzer.

■ Voice notifications

In the following situations, voice notifications will not be output:

- When it is estimated that no occupants are on board*
- After opening a door and entering the vehicle, until the fuel cell system is started
- When 3 minutes or more have elapsed since the fuel cell system was stopped
- When the language setting of the multimedia display has been set to a language that does not support voice notifications
- When all of the doors have been locked from outside the vehicle
- When a door remains open for 1 minute or more after the fuel cell system is stopped
- When the ACC mode (→P.681) has been enabled through a customize setting on the multimedia display and the fuel cell system has been stopped

- When the parking assist volume setting on the multimedia display has been set to off

*: For each seating position, judgment is made based on the opening and closing of a door, before driving for ingress and after driving for egress.

■ Customization

Some functions can be customized. (→P.687)

WARNING

■ To ensure the system can operate properly

→P.331

Turning the safe exit assist system ON/OFF

The safe exit assist system can be enabled/disabled through a customize setting. (→P.687)

When the safe exit assist is off, the driving assist information indicator will illuminate and a message will be displayed on the multi-information display.

Each time the power switch is turned to ON, the safe exit assist is enabled*.

*: When the power switch is turned off and then to ON immediately after that, the safe exit assist may not be enabled.

Safe Exit Assist operation

■ Objects that can be detected by the safe exit assist

When the safe exit assist detects the following vehicles or bicycles

behind your vehicle using a rear side radar sensor, the occupants of the vehicle are informed through an outside rear view mirror indicator, buzzer, multi-information display, and voice notification.

A Vehicle or bicycle which has a high possibility of colliding with a door when opened

■ **The safe exit assist detection areas**

The areas that vehicles can be detected in are outlined below.

A Approximately 145 ft. (45 m) rearward from the front door*

*: The faster a vehicle or bicycle is approaching, the distance at which an outside rear view mirror indicator will illuminate or blink will become further.

■ **The safe exit assist is operational when**

The safe exit assist is operational when all of the following conditions are met:

- When the power switch is ON, less than 3 minutes have elapsed since the fuel cell system was off or less than 3 minutes have elapsed since a door was opened and someone has entered the vehicle (the time which operation

is possible may be extended if a door is opened and closed)

- Safe exit assist is on
- The vehicle is stopped.
- The shift position is in a position other than R.

■ **The safe exit assist will detect a vehicle when**

The safe exit assist will detect a vehicle present in the detection area in the following situations:

When the vehicle is stopped and a vehicle or bicycle, which is traveling parallel to the vehicle, is approaching within the area that a door opens

■ **Conditions under which the system will not detect a vehicle**

- Safe exit assist does not detect the following objects, vehicles, and bicycles:
 - Vehicles or bicycles which are approaching slowly*
 - Vehicles or bicycles which are determined to have a low possibility of colliding with a door when opened*
 - Vehicles or bicycles which are approaching from directly behind*
 - Vehicles or bicycles which are approaching from the front*
 - Guardrails, walls, signs, parked vehicles, and other stationary objects*
 - Pedestrians, animals, etc.*

*: Depending on the conditions, detection of a vehicle and/or object may occur.

- In situations such as the following, safe exit assist will not operate:
 - When 3 minutes or more have elapsed since the fuel cell system off (the time which operation is possible may be extended if a door is opened and closed)
 - When your vehicle is not completely stopped

■ **Conditions under which the system may not function correctly**

- The safe exit assist may not detect vehicles correctly in the following situations:
 - When the sensor is misaligned due to a strong impact to the sensor or its surrounding area
 - When mud, snow, ice, a sticker, etc., is covering the sensor or surrounding area on the rear bumper
 - When driving on a road surface that is wet with standing water

- during bad weather, such as heavy rain, snow, or fog
- When a vehicle or bicycle approaches from behind a nearby parked vehicle
- When an approaching vehicle or bicycle suddenly changes direction
- Immediately after a vehicle or bicycle starts moving
- When the trunk is open
- When a bicycle carrier, ramp, or other accessory is installed to the back of the vehicle
- When a parked vehicle, wall, sign, person or other stationary object is behind the vehicle
- When the vehicle is stopped at an angle to the road
- When a vehicle is traveling near an approaching vehicle or bicycle
- When an approaching vehicle or bicycle is traveling along a stationary object, such a wall or sign
- When a vehicle or bicycle is approaching at high speed
- When towing with the vehicle
- When stopped on a steep slope
- When stopped on a curve or at the exit of a curve
- Instances of the safe exit assist unnecessarily detecting a vehicle and/or object may increase in the following situations:
 - When the sensor is misaligned due to a strong impact to the sensor or its surrounding area
 - When a vehicle or bicycle approaches your vehicle from directly behind in an offset position
 - When the vehicle is stopped at an angle to the road
 - When a vehicle or bicycle approaches from behind a parked vehicle at an angle
 - When a parked vehicle, wall, sign, person or other stationary object is behind the vehicle
 - When an approaching vehicle or bicycle suddenly changes direction
 - When an approaching vehicle or bicycle is traveling along a station-

- any object, such a wall or sign
- When the trunk is open
- When a bicycle carrier, ramp, or other accessory is installed to the back of the vehicle
- When a vehicle or bicycle is approaching at high speed
- When towing with the vehicle
- When stopped on a steep slope
- When stopped on a curve or at the exit of a curve
- When a vehicle or bicycle approaches from behind a vehicle stopped in an adjacent lane

Intuitive parking assist (Vehicles without Toyota Teammate Advanced Drive)*

*: If equipped

The intuitive parking assist function detects the approximate distance from the vehicle and an object such as a wall using ultrasonic sensors and informs the driver with the multimedia display distance display and buzzer.

System components

■ **Type of sensors**

- A** Front corner sensors
- B** Front center sensors
- C** Rear corner sensors
- D** Rear center sensors
- E** Front side sensors (vehicles with Advanced Park)
- F** Rear side sensors (vehicles with Advanced Park)

■ **Display**

When the sensors detect an object, such as a wall, a graphic is shown on the multimedia display depending on the position and distance to the object.

Vehicles without multimedia display or rear camera: When detecting a stationary object, the intuitive parking assist detection indicator illuminates. (→P.110)

► Multimedia display

- A** Front corner sensor detection
- B** Front center sensor detection
- C** Rear corner sensor detection
- D** Rear center sensor detection
- E** Front side sensor detection (vehicles with Advanced Park)
- F** Rear side sensor detection (vehicles with Advanced Park)

Turning the intuitive parking assist function ON/OFF

The intuitive parking assist func-

tion can be enabled/disabled through a customize setting. (→P.687)

When the intuitive parking assist function is disabled, the intuitive parking assist OFF indicator (→P.110) illuminates on the multi-information display.

If the system switches to OFF (disabled) and the intuitive parking assist is stopped, the intuitive parking assist will not be re-enabled until ON (enabled) is selected again from the customize setting (→P.687).

(It remains off even if the power switch is turned to ON again after the power switch has been turned off.)

Vehicles without the multimedia display or rear camera: However, the system will automatically turn on (enabled) and the intuitive parking assist OFF indicator will turn off if the shift position is changed to R.

When the shift position is R, the intuitive parking assist cannot be turned on or off.

The setting of intuitive parking assist itself will not change.

⚠ WARNING**■ Cautions regarding the use of the system**

There is a limit to the degree of recognition accuracy and control performance that this system can provide, do not overly rely on this system. The driver is always responsible for paying attention to the vehicle's surroundings and driving safely.

■ To ensure the system can operate properly

Make sure to observe the following precautions. The system may not operate properly and may lead to an unexpected accident. When these precautions cannot be observed, turn the system off.

- Do not damage the sensors, and always keep them clean.
- Do not attach a sticker or install an electronic component, such as a backlit license plate (especially fluorescent type), fog lights, fender pole or wireless antenna near a radar sensor.
- Do not subject the surrounding area of the sensor to a strong impact. If subjected to an impact, have the vehicle inspected by your Toyota dealer. If the front or rear bumper needs to be removed/installed or replaced, contact your Toyota dealer.
- Do not modify, disassemble or paint the sensors.
- Do not attach a license plate cover.
- Keep your tires properly inflated.
- Do not install a suspension other than a genuine suspension.

⚠ WARNING**■ Notes when washing the vehicle**

- When using a high pressure washer to wash the vehicle, do not spray the sensors directly, as doing so may cause a sensor to malfunction.
- When using steam to clean the vehicle, do not direct steam too close to the sensors as doing so may cause a sensor to malfunction.

■ The system can be operated when

- The power switch is in ON.
- The intuitive parking assist is on.
- The vehicle speed is less than about 6 mph (10 km/h).
- A shift position other than P is selected.

Vehicles without the multimedia display or rear camera: The system will automatically turn on (enabled) and the intuitive parking assist OFF indicator will turn off if the shift position is changed to R.

The setting of intuitive parking assist itself will not change.

■ Sensor detection information

- The sensor's detection areas are limited to the areas around the vehicle's front and rear bumpers.
- Certain vehicle conditions and the surrounding environment may affect the ability of a sensor to correctly detect an object.
- Objects may not be detected if they are too close to the sensor.
- There will be a short delay between object detection and display. Even at low speeds, there is a

possibility that the object will come within the sensor's detection areas before the display is shown and the warning beep sounds.

- It might be difficult to hear the buzzer due to the volume of the audio system or air flow noise of the air conditioning system.
- It may be difficult to hear the sound of this system due to the buzzers of other systems.
- If the meter malfunctions, the buzzer may not sound.

■ Objects which the system may not be properly detected

The shape of the object may prevent the sensor from detecting it. Pay particular attention to the following objects:

- Wires, fences, ropes, etc.
- Cotton, snow and other materials that absorb sound waves
- Sharply-angled objects
- Low objects
- Tall objects with upper sections projecting outwards in the direction of your vehicle

People may not be detected if they are wearing certain types of clothing.

■ Situations in which the system may not operate properly

Certain vehicle conditions and the surrounding environment may affect the ability of a sensor to correctly detect objects. Particular instances where this may occur are listed below.

- There is dirt, snow, water drops or ice on a sensor. (Cleaning the sensors will resolve this problem.)
- A sensor is frozen. (Thawing the area will resolve this problem.) In especially cold weather, if a sensor is frozen the sensor display may be displayed abnormally, or objects, such as a wall, may not

be detected.

- When a sensor or the area around a sensor is extremely hot or cold.

- On an extremely bumpy road, on an incline, on gravel, or on grass.
- When vehicle horns, vehicle detectors, motorcycle engines, air brakes of large vehicles, the clearance sonar of other vehicles or other devices which produce ultrasonic waves are near the vehicle
- A sensor is coated with a sheet of spray or heavy rain.
- If objects draw too close to the sensor.
- When a pedestrian is wearing clothing that does not reflect ultrasonic waves (ex. skirts with gathers or frills).
- When objects that are not perpendicular to the ground, not perpendicular to the vehicle traveling direction, uneven, or waving are in the detection range.
- When strong winds are blowing
- When driving in inclement weather such as fog, snow or a sandstorm
- When an object that cannot be detected is between the vehicle and a detected object
- If an object such as a vehicle, motorcycle, bicycle or pedestrian cuts in front of the vehicle or runs out from the side of the vehicle
- If the orientation of a sensor has been changed due to a collision or other impact
- When equipment such as a towing eyelet, transport hook, bumper protector, bumper trim, bicycle

carrier or snow-removal device (snow plow) is installed near the sensor

- If the front of the vehicle is raised or lowered due to the carried load
- If the vehicle cannot be driven in a stable manner, such as when the vehicle has been in an accident or is malfunctioning
- When tire chains, compact spare tire or an emergency tire puncture repair kit are used
- When towing with the vehicle

■ **Situations in which the system may operate even if there is no possibility of a collision**

In some situations, such as the following, the system may operate even though there is no possibility of a collision.

- When driving on a narrow road

- When driving toward a banner, flag, low-hanging branch or boom barrier (such as those used at railroad crossings, toll gates and parking lots)
- When there is a rut or hole in the surface of the road
- When driving on a metal cover (grating), such as those used for drainage ditches
- When driving up or down a steep slope
- If a sensor is hit by a large amount of water, such as when driving on a flooded road
- There is dirt, snow, water drops or ice on a sensor. (Cleaning the sensors will resolve this problem.)

- A sensor is coated with a sheet of spray or heavy rain
- When driving in inclement weather such as fog, snow or a sandstorm
- When strong winds are blowing

- When vehicle horns, vehicle detectors, motorcycle engines, air brakes of large vehicles, the clearance sonar of other vehicles or other devices which produce ultrasonic waves are near the vehicle
- If the front of the vehicle is raised or lowered due to the carried load
- If the orientation of a sensor has been changed due to a collision or other impact
- The vehicle is approaching a tall or curved curb
- Driving close to columns (H-shaped steel beams, etc.) in multi-story parking garages, construction sites, etc.
- If the vehicle cannot be driven in a stable manner, such as when the vehicle has been in an accident or is malfunctioning
- On an extremely bumpy road, on an incline, on gravel, or on grass

- When tire chains, compact spare tire or an emergency tire puncture repair kit are used

● When towing with the vehicle

■ Certification

→P.751

Sensor detection display, object distance

■ Detection range of the sensors

▶ Vehicles without Advanced Park

A Approximately 3.3 ft. (100 cm)

B Approximately 4.9 ft. (150 cm)

C Approximately 2.0 ft. (60 cm)

The diagram shows the detection range of the sensors. Note that the sensors cannot detect objects that are extremely close to the vehicle.

The range of the sensors may change depending on the shape of the object, etc.

▶ Vehicles with Advanced Park

A Approximately 6.6 ft. (200 cm)

The diagram shows the detection range of the sensors. Note that the sensors cannot detect objects that are extremely close to the vehicle.

The range of the sensors may change depending on the shape of the object, etc.

■ **The distance and buzzer**

▶ Vehicles without Advanced Park

Approximate distance to obstacle	Buzzer
Front center sensor: Approximately 3.3 ft. (100 cm) to 2.0 ft. (60 cm)* Rear center sensor: Approximately 4.9 ft. (150 cm) to 2.0 ft. (60 cm)*	Slow
Approximately 2.0 ft. (60 cm) to 1.5 ft. (45 cm)*	Medium
Approximately 1.5 ft. (45 cm) to 1.0 ft. (30 cm)*	Fast
Approximately less than 1.0 ft. (30 cm)	Continuous

*: Automatic buzzer mute function is enabled. (→P.352)

► Vehicles with Advanced Park

Approximate distance to obstacle	Buzzer
Front center sensor: Approximately 6.6 ft. (200 cm) to 3.3 ft. (100 cm) Rear center sensor: Approximately 6.6 ft. (200 cm) to 4.9 ft. (150 cm) Corner sensor: Approximately 6.6 ft. (200 cm) to 2.0 ft. (60 cm) Side sensor: Approximately 6.6 ft. (200 cm) to 5.4 ft. (165 cm)	Does not sound (Display only)
Front center sensor: Approximately 3.3 ft. (100 cm) to 2.0 ft. (60 cm)* Rear center sensor: Approximately 4.9 ft. (150 cm) to 2.0 ft. (60 cm)* Side sensor: Approximately 5.4 ft. (165 cm) to 2.0 ft. (60 cm)*	Slow
Except side sensor: Approximately 2.0 ft. (60 cm) to 1.5 ft. (45 cm)* Side sensor: Approximately 2.0 ft. (60 cm) to 1.3 ft. (40 cm)*	Medium
Except side sensor: Approximately 1.5 ft. (45 cm) to 1.0 ft. (30 cm)* Side sensor: Approximately 1.3 ft. (40 cm) to 1.0 ft. (30 cm)*	Fast
Approximately less than 1.0 ft. (30 cm)	Continuous

*: Automatic buzzer mute function is enabled. (→P.352)

Intuitive parking assist buzzer

A buzzer sounds when the sensors are operating.

- The buzzer beeps faster as the vehicle approaches a static object.
When the vehicle comes within the approximately 1.0 ft. (30 cm) of the object, the buzzer will sound continuously.
- When 2 or more sensors simultaneously detect a static object, the buzzer sounds for the nearest object.
- After a buzzer begins sounding, if the distance between the vehicle and the detected a static object does not become shorter, the buzzer will be muted automatically. (automatic buzzer mute function)

■ Adjusting the buzzer volume

The buzzer volume of the intuitive parking assist, RCTA, and RCD can all be changed at once from the customize settings. (→P.687)

■ Muting a buzzer

When the temporary mute switch is displayed on the multimedia display, this switch can be pressed to temporarily mute the buzzer.

Select the switch to mute a buzzer of the intuitive parking assist, RCTA,

When the vehicle is moving, the side sensors or side cameras can detect objects. While the vehicle is moving, if a detected object can

and RCD all together.

- Mute will be automatically canceled in the following situations:
 - When the shift position is changed.
 - When the vehicle speed exceeds a certain speed.
 - When there is a malfunction in a sensor or the system is temporarily unavailable.
 - When the operating function is disabled manually.
 - When the power switch is turned off.

Intuitive parking assist object warning function (vehicles with Advanced Park)

The object warning function informs the driver of the existence of objects along the side of the vehicle, using a display and buzzer, if the objects are within the estimated path of the vehicle.

A Object

B Calculated vehicle route

no longer be detected by the side sensors or side cameras, the location of the object relative to the vehicle is estimated. If the object is determined to be in the estimated path of the vehicle, the object warning function will operate.

A Object detected by side sensors or side cameras

- 1 The vehicle is stopped and objects along the sides of the vehicle are not detected.
- 2 Objects are detected as the vehicle is moving.
- 3 Even though the objects are outside of the detection area of the side sensors or side cameras, a warning is displayed and a buzzer sounds.

Object warning function operating conditions

- The vehicle moves about 23.0 ft. (7 m) after the fuel cell system is started.
- The R shift position is selected.
- After the D shift position has been selected, the vehicle has moved 23.0 ft. (7 m) or less.
-  switch has been pressed and the multimedia display is displayed.
- The front or rear sensor detects a stationary object.

Detection of objects along the sides of the vehicle

- Objects along the sides of the vehicle are not instantaneously detected. The location of objects in relation to the vehicle is estimated after they are first detected

by the front or rear side sensors, or side cameras. Therefore, after the power switch is changed to ON, even if an object is along the side of the vehicle, it may not be detected until the vehicle has been driven a small amount and the side sensors or side cameras completely scan the areas along the sides of the vehicle.

- If a vehicle, person, animal, etc., is detected by a side sensors or side cameras, but then leaves the detection area of the side sensors or side cameras, the system will assume the object has not moved.

⚠ WARNING

■ **Side sensors and side cameras**

In situations such as the following, the function may not operate correctly, possibly leading to an accident. Proceed carefully.

- When starting off shortly after the power switch is turned to ON and a small vehicle or other object which cannot be detected by a front side sensor is next to the vehicle.
In the situation shown in the following illustration, even if the vehicle starts off, the vehicle on the left will not be detected and the object warning function will not operate.

- When an object or person is in a position which cannot be detected by the side sensors or side cameras.
- When, after the side sensors have completed scanning the areas along the sides of the vehicle, a vehicle, person, or other object approaches the side of the vehicle and cannot be detected.
- When the outside rear view mirror is closed, the side sensors or side cameras cannot detect objects.
- If the 12-volt battery was discharged or has been removed and installed, fold and extend the outside rear view mirrors.

Intuitive parking assist (Vehicles with Toyota Teammate Advanced Drive)*

*: If equipped

The distance from your vehicle to objects, such as a wall, when parallel parking or maneuvering into a garage is measured by the sensors and communicated via the multimedia display and a buzzer. Always check the surrounding area when using this system.

System components

■ **Types of sensors**

- A** Front corner sensors
- B** Front center sensors
- C** Rear corner sensors
- D** Rear center sensors
- E** Front side sensors (vehicles with Advanced Park)
- F** Rear side sensors (vehicles

with Advanced Park)

■ **Display**

When the sensors detect an object, such as a wall, a graphic is shown on the multimedia display depending on the position and distance to the object. (As the distance to the object becomes short, the distance segments may blink.)

- ▶ Multimedia display (vehicles without Advanced Park)

- ▶ Multimedia display (vehicles with Advanced Park)

- A** Front corner sensor detection
- B** Front center sensor detection
- C** Rear corner sensor detection
- D** Rear center sensor detection
- E** Front side sensor detection

- F** Rear side sensor detection

Turning intuitive parking assist on/off

Use the meter control switches to enable/disable the intuitive parking assist. (→P.144)

- 1 Press < or > to select .
- 2 Press ^ or v to select and then press OK.

When the intuitive parking assist function is disabled, the intuitive parking assist OFF indicator (→P.138) illuminates.

To re-enable the system when it was disabled, select on the multi-information display, select and then On. If disabled using this method, the system will not be re-enabled by turning the power switch off and then to ON.

WARNING

■ **Cautions regarding the use of the system**

There is a limit to the degree of recognition accuracy and control performance that this system can provide, do not overly rely on this system. The driver is always responsible for paying attention to the vehicle' surroundings and driving safely.

5
Driving

 **WARNING**

■ **To ensure the system can operate properly**

Observe the following precautions.

Failing to do so may result in the vehicle being unable to be driven safely and possibly cause an accident.

- Do not damage the sensors, and always keep them clean.
- Do not attach a sticker or install an electronic component, such as a backlit license plate (especially fluorescent type), fog lights, fender pole or wireless antenna near a radar sensor.
- Do not subject the surrounding area of the sensor to a strong impact. If subjected to an impact, have the vehicle inspected by your Toyota dealer. If the front or rear bumper needs to be removed/installed or replaced, contact your Toyota dealer.
- Do not modify, disassemble or paint the sensors.
- Do not attach a license plate cover.
- Keep your tires properly inflated.

■ **When to disable the function**

In the following situations, disable the function as it may operate even though there is no possibility of a collision.

- Failing to observe the warnings above.
- A non-genuine Toyota suspension (lowered suspension, etc.) is installed.

■ **Notes when washing the vehicle**

Do not apply intensive bursts of water or steam to the sensor area.

Doing so may result in the sensor malfunctioning.

- When using a high pressure washer to wash the vehicle, do not spray the sensors directly, as doing so may cause a sensor to malfunction.
- When using steam to clean the vehicle, do not direct steam too close to the sensors as doing so may cause a sensor to malfunction.

■ **The system can be operated when**

- The power switch is in ON.
- Intuitive parking assist function is on.
- The vehicle speed is less than about 6 mph (10 km/h).
- A shift position other than P is selected.

■ **If “Clean Parking Assist Sensor” is displayed on the multi-information display**

A sensor may be covered with water drops, ice, snow, dirt, etc. Remove the water drops, ice, snow, dirt, etc., from the sensor to return the system to normal.

Also, due to ice forming on a sensor at low temperatures, a warning message may be displayed or the sensor may not be able to detect an object. Once the ice melts, the system will return to normal.

If a warning message is displayed even if the sensor is clean, there may be a sensor malfunction. Have the vehicle inspected by your Toyota dealer.

■ If “Parking Assist Unavailable” is displayed on the multi-information display

Water may be continuously flowing over the sensor surface, such as in a heavy rain. When the system determines that it is normal, the system will return to normal.

■ Sensor detection information

- The sensor’s detection areas are limited to the areas around the vehicle’ front and rear bumpers.
- The following situations may occur during use.
 - Depending on the shape of the object and other factors, the detection distance may shorten, or detection may be impossible.
 - Detection may be impossible if static objects draw too close to the sensor.
 - There will be a short delay between static object detection and display (warning buzzer sounds). Even at low speeds, there is a possibility that the object will come within 11.9 in. (30 cm) before the display is shown and the warning buzzer sounds.
 - It might be difficult to hear the buzzer due to the volume of the audio system or air flow noise of the air conditioning system.
 - It may be difficult to hear the sound of this system due to the buzzers of other systems.

■ Objects which the system may not be properly detected

The shape of the object may prevent the sensor from detecting it. Pay particular attention to the following objects:

- Wires, fences, ropes, etc.
- Cotton, snow and other materials that absorb sound waves
- Sharply-angled objects
- Low objects
- Tall objects with upper sections projecting outwards in the direction of your vehicle

■ Situations in which the system may not operate properly

Certain vehicle conditions and the surrounding environment may affect the ability of a sensor to correctly detect objects. Particular instances where this may occur are listed below.

- There is dirt, snow, water drops or ice on a sensor. (Cleaning the sensors will resolve this problem.)
- A sensor is frozen. (Thawing the area will resolve this problem.) In especially cold weather, if a sensor is frozen the sensor display may be displayed abnormally, or objects, such as a wall, may not be detected.
- When a sensor or the area around a sensor is extremely hot or cold.

- On an extremely bumpy road, on an incline, on gravel, or on grass.
- When vehicle horns, vehicle detectors, motorcycle engines, air brakes of large vehicles, the clearance sonar of other vehicles or other devices which produce ultrasonic waves are near the vehicle
- A sensor is coated with a sheet of spray or heavy rain.
- If objects draw too close to the

sensor.

- When a pedestrian is wearing clothing that does not reflect ultrasonic waves (ex. skirts with gathers or frills).
- When objects that are not perpendicular to the ground, not perpendicular to the vehicle traveling direction, uneven, or waving are in the detection range.
- Strong wind is blowing
- When driving in inclement weather such as fog, snow or a sandstorm
- When an object that cannot be detected is between the vehicle and a detected object
- If an object such as a vehicle, motorcycle, bicycle or pedestrian cuts in front of the vehicle or runs out from the side of the vehicle
- If the orientation of a sensor has been changed due to a collision or other impact
- When equipment that may obstruct a sensor is installed, such as a towing eyelet, bumper protector (an additional trim strip, etc.), bicycle carrier, or snow plow
- If the front of the vehicle is raised or lowered due to the carried load
- If the vehicle cannot be driven in a stable manner, such as when the vehicle has been in an accident or is malfunctioning
- When a tire chains, compact spare tire or an emergency tire puncture repair kit is used

■ **Situations in which the system may operate even if there is no possibility of a collision**

In some situations, such as the following, the system may operate even though there is no possibility of a collision.

- When driving on a narrow road

- When driving toward a banner, flag, low-hanging branch or boom barrier (such as those used at railroad crossings, toll gates and parking lots)
- When there is a rut or hole in the surface of the road
- When driving on a metal cover (grating), such as those used for drainage ditches
- When driving up or down a steep slope
- If a sensor is hit by a large amount of water, such as when driving on a flooded road
- There is dirt, snow, water drops or ice on a sensor. (Cleaning the sensors will resolve this problem.)
- A sensor is coated with a sheet of spray or heavy rain
- When driving in inclement weather such as fog, snow or a sandstorm
- When strong winds are blowing

- When vehicle horns, vehicle detectors, motorcycle engines, air brakes of large vehicles, the clearance sonar of other vehicles or other devices which produce ultrasonic waves are near the vehicle
- If the front of the vehicle is raised or lowered due to the carried load

- If the orientation of a sensor has been changed due to a collision or other impact
- The vehicle is approaching a tall or curved curb
- Driving close to columns (H-shaped steel beams, etc.) in multi-story parking garages, construction sites, etc.
- If the vehicle cannot be driven in a stable manner, such as when the vehicle has been in an accident or is malfunctioning
- On an extremely bumpy road, on an incline, on gravel, or on grass

- When a tire chains, compact spare tire or an emergency tire puncture repair kit is used

■ **Certification**

→P.751

Sensor detection display, object distance

■ **Detection range of the sensors (vehicles without Advanced Park)**

A Approximately 3.3 ft. (100 cm)

B Approximately 4.9 ft. (150 cm)

C Approximately 2.0 ft. (60 cm)

The diagram shows the detection range of the sensors. Note that the sensors cannot detect objects that are extremely close to the vehicle.

The range of the sensors may change depending on the shape of the object, etc.

■ **Detection range of the sensors (vehicles with Advanced Park)**

A Approximately 6.6 ft. (200 cm)

The diagram shows the detection range of the sensors. Note that the sensors cannot detect objects that are extremely close to the vehicle.

The range of the sensors may change depending on the shape of the object, etc.

■ **The distance and buzzer**

▶ **Vehicles without Advanced Park**

Approximate distance to obstacle	Buzzer
Front center sensor: Approximately 3.3 ft. to 2.0 ft. (100 cm to 60 cm)* Rear center sensor: Approximately 4.9 ft. to 2.0 ft. (150 cm to 60 cm)*	Slow
Approximately 2.0 ft. to 1.5 ft. (60 cm to 45 cm)*	Medium
Approximately 1.5 ft. to 1.0 ft. (45 cm to 30 cm)*	Fast
Approximately 1.0 ft. to 0.5 ft. (30 cm to 15 cm)	Continuous
Less than approximately 0.5 ft. (15 cm)	

*: Automatic buzzer mute function is enabled. (→P.362)

► Vehicles with Advanced Park

Approximate distance to obstacle	Buzzer
Front center sensor: Approximately 6.6 ft. to 3.3 ft. (200 cm to 100 cm) Rear center sensor: Approximately 6.6 ft. to 4.9 ft. (200 cm to 150 cm) Side sensor: Approximately 6.6 ft. to 4.1 ft. (200 cm to 125 cm) Corner sensor: Approximately 6.6 ft. to 2.0 ft. (200 cm to 60 cm)	Does not sound (Display only)
Front center sensor: Approximately 3.3 ft. to 2.0 ft. (100 cm to 60cm)* Rear center sensor: Approximately 4.9 ft. to 2.0 ft. (150 cm to 60cm)* Side sensor: Approximately 4.1 ft. to 2.0ft. (125 cm to 60 cm)*	Slow
Approximately 2.0 ft. to 1.5 ft. (60 cm to 45 cm)*	Medium
Approximately 1.5 ft. to 1.0 ft. (45 cm to 30 cm)*	Fast
Less than approximately 1.0 ft. (30 cm)	Continuous

*: Automatic buzzer mute function is enabled. (→P.362)

■ **Buzzer operation and distance to an object**

A buzzer sounds when the sensors are operating.

- The buzzer beeps faster as the vehicle approaches an object. When the vehicle comes within approximately 1.0 ft.

(30 cm) of the object, the buzzer sounds continuously.

- When 2 or more sensors simultaneously detect a static object, the buzzer sounds for the nearest object.
- Even when the sensors are operating, the buzzer will be muted in some situations. (automatic buzzer mute function)

■ Adjusting the buzzer volume

The buzzer volume can be adjusted on the multi-information display.

Use the meter control switches to change settings. (→P.144)

- 1 Press < or > of the meter control switch to select .
- 2 Press ^ or v of the meter control switch to select  and then press and hold OK.
- 3 Select the volume and then press OK.

Each time the switch is pressed, the volume level will change between 1, 2, and 3.

■ Muting a buzzer temporarily

When an object is detected, the temporary mute switch is displayed on the multimedia display system.

Select  to mute a buzzer of

intuitive parking assist, RCTA*, and RCD* all together.

Mute will be canceled automatically in the following situations:

- When the shift position is changed.
- When the vehicle speed exceeds a certain speed.
- When there is a malfunction in a sensor or the system is temporarily unavailable.
- When the operating function is disabled manually.
- When the power switch is turned off.

*: If equipped

Object warning function (vehicles with Advanced Park)

The object warning function informs the driver of the existence of objects along the side of the vehicle, using a display and buzzer, if the objects are within the estimated path of the vehicle.

A Object

B Calculated vehicle route

When the vehicle is moving, the side sensors or side cameras can detect objects. While the vehicle is moving, if a detected object can no longer be detected by the side sensors or side cameras, the location of the object relative to the vehicle is estimated. If the object is determined to be in the estimated path of the vehicle, the object warning function will operate.

A Object detected by side sensors or side cameras

- 1 The vehicle is stopped and objects along the sides of the vehicle are not detected.
- 2 Objects are detected as the vehicle is moving.
- 3 Even though the objects are outside of the detection area of the side sensors or side cameras, a warning is displayed and a buzzer sounds.

■ Object warning function operating conditions

- The Advanced Park is operating.
- The vehicle moves about 23.0 ft. (7 m) after the fuel cell system is started.
- The R shift position is selected.
- After the D shift position has been selected, the vehicle has moved 23.0 ft. (7 m) or less.
- Camera switch has been pressed and the multimedia display is displayed.
- The front or rear sensor detects a stationary object.

■ Detection of objects along the sides of the vehicle

- Objects along the sides of the vehicle are not instantaneously detected. The location of objects in relation to the vehicle is estimated after they are first detected by the front or rear side sensors, or side cameras. Therefore, after the power switch is changed to ON, even if an object is along the side of the vehicle, it may not be detected until the vehicle has been driven a small amount and the side sensors or side cameras completely scan the areas along the sides of the vehicle.
- If a vehicle, person, animal, etc., is detected by a side sensors or side cameras, but then leaves the

detection area of the side sensors or side cameras, the system will assume the object has not moved.

- If the 12-volt battery was discharged or has been removed and installed, fold and extend the outside rear view mirrors.

⚠ WARNING

■ **Side sensors and side cameras**

In situations such as the following, the function may not operate correctly, possibly leading to an accident. Proceed carefully.

- When starting off shortly after the power switch is turned to ON and a small vehicle or other object which cannot be detected by a front side sensor is next to the vehicle.

In the situation shown in the following illustration, even if the vehicle starts off, the vehicle on the left will not be detected and the object warning function will not operate.

- When an object or person is in a position which cannot be detected by the side sensors or side cameras.
- When, after the side sensors have completed scanning the areas along the sides of the vehicle, a vehicle, person, or other object approaches the side of the vehicle and cannot be detected.
- When the outside rear view mirror is closed, the side sensors or side cameras cannot detect objects.

RCTA (Rear Cross Traffic Alert) (Vehicles without Toyota Teammate Advanced Drive)

The RCTA function uses the BSM rear side radar sensors installed behind the rear bumper. This function is intended to assist the driver in checking areas that are not easily visible when backing up.

⚠ WARNING

■ Cautions regarding the use of the system

The driver is solely responsible for safe driving. Always drive safely, taking care to observe your surroundings.

The RCTA function is only a supplementary function which alerts the driver that a vehicle is approaching from the right or left at the rear of the vehicle.

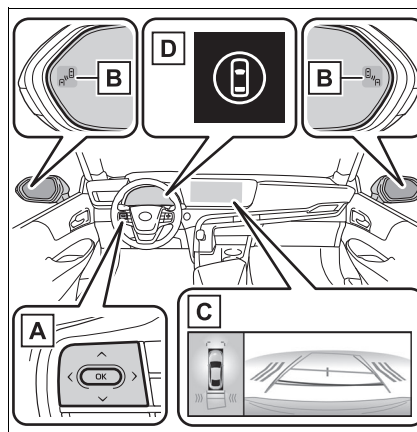

As the RCTA function may not function correctly under certain conditions, the driver's own visual confirmation of safety is necessary.

Over reliance on this function may lead to an accident resulting death or serious injury.

■ To ensure the system can operate properly

→P.331

System components

A Meter control switches

Operate the meter control switches to enable/disable the RCTA function on the multi-information display.

B Outside rear view mirror indicators

If a vehicle is detected as approaching from the left or right behind the vehicle, both outside rear view mirror indicators (→P.110) will blink and a buzzer will sound.

C Multimedia display

If a vehicle approaching from the right or left at the rear of the vehicle is detected, the RCTA icon (→P.366) for the detected side will be displayed on the multimedia display. This illustration* shows an example of a vehicle approaching from both sides of the vehicle.

*: Depending on the vehicle grade and equipped options, the actual screen may be different from this illustration.

D Driving assist information indicator

Illuminates when the RCTA is turned off. At this time, a message will be displayed on the multi-information display.

Turning the RCTA function on/off

The RCTA can be enabled/disabled through a customize setting. (→P.688)

When the RCTA function is off, the driving assist information indicator (→P.110) will illuminate and a message will be displayed on the multi-information display. Each time the power switch is turned to ON, the RCTA function is enabled.

Outside rear view mirror indicator visibility

In strong sunlight, the outside rear view mirror indicator may be difficult to see.

Hearing the RCTA buzzer

The RCTA buzzer may be difficult to hear over loud noises, such as if the audio system volume is high.

Rear side radar sensors

→P.331

RCTA function

Operation of the RCTA function

The RCTA function uses rear side radar sensors to detect vehicles approaching from the

right or left at the rear of the vehicle and alerts the driver of the presence of such vehicles by flashing the outside rear view mirror indicators and sounding a buzzer.

A Approaching vehicles

B Detection areas of approaching vehicles

RCTA icon display

When a vehicle approaching from the right or left at the rear of the vehicle is detected, the following will be displayed on the multimedia display.

- Example: Vehicles are approaching from both sides of the vehicle.

RCTA function detection areas

The areas that vehicles can be

detected in are outlined below.

The buzzer can alert the driver of faster vehicles approaching from farther away.

Example:

Approaching vehicle speed	A Approximate alert distance
34mph(56km/h) (fast)	98 ft. (30m)
5mph(8km/h) (slow)	13 ft. (4m)

■ The RCTA function is operational when

The RCTA function operates when all of the following conditions are met:

- The power switch is in ON.
- The RCTA function is on.
- The shift position is in R.
- The vehicle speed is less than approximately 9 mph (15 km/h).
- The approaching vehicle speed is between approximately 5 mph (8 km/h) and 34 mph (56 km/h).

■ Setting the buzzer volume

The buzzer volume of the RCTA, intuitive parking assist (if equipped), and RCD (if equipped) can be adjusted all together through a customize setting. (→P.688)

■ Muting a buzzer temporarily

When an object is detected, the temporary mute switch is displayed on the multimedia display.

Select the switch to mute the buzzer of the intuitive parking assist (if equipped), RCTA, and RCD (if equipped) all together.

Mute will be canceled automatically in the following situations:

- When the shift lever is changed.
- When the vehicle speed exceeds a certain speed.
- When there is a malfunction in a sensor or the system is temporarily unavailable.
- When the operating function is disabled manually.
- When the power switch is turned off.

■ Conditions under which the system will not detect a vehicle

The RCTA function is not designed to detect the following types of vehicles and/or objects:

- Vehicles approaching from directly behind
- Vehicles backing up in a parking space next to your vehicle
- Vehicles that the sensors cannot detect due to obstructions

- Guardrails, walls, signs, parked vehicles and similar stationary objects*
- Small motorcycles, bicycles, pedestrians, etc.*
- Vehicles moving away from your vehicle

- Vehicles approaching from the parking spaces next to your vehicle*
- The distance between the sensor and approaching vehicle gets too close

*: Depending on the conditions, detection of a vehicle and/or object may occur.

■ Situations in which the system may not operate properly

The RCTA function may not detect vehicles correctly in the following situations:

- When the sensor is misaligned due to a strong impact to the sensor or its surrounding area
- When mud, snow, ice, a sticker, etc., is covering the sensor or surrounding area on the position above the rear bumper
- When driving on a road surface that is wet with standing water during bad weather, such as heavy rain, snow, or fog
- When multiple vehicles are approaching with only a small gap between each vehicle
- When a vehicle is approaching at high speed
- When equipment that may obstruct a sensor is installed, such as a towing eyelet, bumper protector (an additional trim strip, etc.), bicycle carrier, or snow plow
- When backing up on a slope with a sharp change in grade

- When backing out of a sharp angle parking spot

- Immediately after the RCTA function is turned on
- Immediately after the fuel cell system is started with the RCTA function on
- When the sensors cannot detect a vehicle due to obstructions
- When towing with the vehicle
- When there is a significant difference in height between your vehicle and the vehicle that enters the detection area
- When a sensor or the area around a sensor is extremely hot or cold
- If the suspension has been modified or tires of a size other than specified are installed
- If the front of the vehicle is raised or lowered due to the carried load
- When turning while backing up

- When a vehicle turns into the detection area

■ Situations in which the system may operate even if there is no possibility of a collision

Instances of the RCTA function unnecessarily detecting a vehicle and/or object may increase in the following situations:

- When the parking space faces a street and vehicles are being driven on the street

- When the distance between your vehicle and metal objects, such as a guardrail, wall, sign, or parked vehicle, which may reflect electrical waves toward the rear of the vehicle, is short

- When equipment that may obstruct a sensor is installed, such as a towing eyelet, bumper protector (an additional trim strip, etc.), bicycle carrier, or snow plow
- When a vehicle passes by the side of your vehicle

- When a detected vehicle turns while approaching the vehicle

- When there are spinning objects near your vehicle such as the fan of an air conditioning unit
- When water is splashed or sprayed toward the rear bumper, such as from a sprinkler
- Moving objects (flags, exhaust fumes, large rain droplets or snowflakes, rain water on the road surface, etc.)
- When the distance between your vehicle and a guardrail, wall, etc., that enters the detection area is short
- Gratings and gutters

- When a sensor or the area around a sensor is extremely hot or cold
- If the suspension has been modified or tires of a size other than specified are installed
- If the front of the vehicle is raised or lowered due to the carried load
- When towing with the vehicle

RCTA (Rear Cross Traffic Alert) (Vehicles with Toyota Teammate Advanced Drive)*

*: If equipped

The RCTA function uses the BSM rear side radar sensors installed behind the rear bumper. This function is intended to assist the driver in checking areas that are not easily visible when backing up.

 **WARNING**

■ **Cautions regarding the use of the system**

The driver is solely responsible for safe driving. Always drive safely, taking care to observe your surroundings.

The RCTA function is only a supplementary function which alerts the driver that a vehicle is approaching from the right or left at the rear of the vehicle.

As the RCTA function may not function correctly under certain conditions, the driver's own visual confirmation of safety is necessary.

Over reliance on this function may lead to an accident resulting death or serious injury.

■ **To ensure the system can operate properly**

→P.336

System components

A Meter control switches

Turning the RCTA function on/off.

B Outside rear view mirror indicators

When a vehicle approaching from the right or left at the rear of the vehicle is detected, both outside rear view mirror indicators will flash.

C Multimedia display

If a vehicle approaching from the right or left at the rear of the vehicle is detected, the RCTA icon (→P.372) for the detected side will be displayed on the multimedia display. This illustration shows an example of a vehicle approaching from both sides of the vehicle.

D RCTA buzzer

If a vehicle approaching from the right or left at the rear of the vehicle is detected, a buzzer will sound.

The buzzer also sounds for approximately 1 second immediately after the RCTA function is turned on.

Turning the RCTA function on/off

Use the meter control switches to enable/disable the RCTA function. (→P.144)

- 1 Press < or > to select .
- 2 Press ^ or v to select “RCTA” and then press OK.

When the RCTA function is disabled, the RCTA OFF indicator (→P.138) illuminates. (Each time the power switch is turned off then changed to ON, the RCTA function will be enabled automatically.)

Outside rear view mirror indicator visibility

In strong sunlight, the outside rear view mirror indicator may be difficult to see.

Hearing the RCTA buzzer

The RCTA buzzer may be difficult to hear over loud noises, such as high audio volume.

When “Rear Cross Traffic Alert Unavailable” is shown on the multi-information display

The sensor voltage has become abnormal, or water, snow, mud, etc., may be built up in the vicinity of the sensor area of the rear bumper. (→P.336)

Removing the water, snow, mud, etc., from the vicinity of the sensor area should return it to normal. Also, the sensor may not function normally when used in extremely hot or cold weather.

■ **When “Rear Cross Traffic Alert Malfunction Visit Your Dealer” is shown on the multi-information display**

There may be a sensor malfunction or misaligned. Have the vehicle inspected at your Toyota dealer.

■ **Radar sensors**

→P.336

RCTA function

■ **Operation of the RCTA function**

The RCTA function uses radar sensors to detect vehicles approaching from the right or left at the rear of the vehicle and alerts the driver of the presence of such vehicles by flashing the outside rear view mirror indicators and sounding a buzzer.

A Approaching vehicles

B Detection areas of approaching vehicles

■ **RCTA icon display**

When a vehicle approaching from the right or left at the rear of the vehicle is detected, the following will be displayed on the multimedia display.

This illustration shows an example of a vehicle approaching from both sides of the vehicle.

■ **RCTA function detection areas**

The areas that vehicles can be detected in are outlined below.

The buzzer can alert for faster vehicles approaching from farther away.

Example:

Approaching vehicle	Speed	A Approximate alert distance
Fast	34 mph (56 km/h)	131 ft. (40 m)
Slow	5 mph (8 km/h)	18 ft. (5.5 m)

■ The RCTA function is operational when

The RCTA function operates when all of the following conditions are met:

- The power switch is in ON.
- The RCTA function is on.
- The shift position is in R.
- The vehicle speed is less than approximately 9 mph (15 km/h).
- The approaching vehicle speed is between approximately 5 mph (8 km/h) and 34 mph (56 km/h).

■ Adjusting the buzzer volume

The buzzer volume can be adjusted on the multi-information display.

Use the meter control switches to change settings. (→P.144)

- 1 Press < or > of the meter control switch to select .
- 2 Press ^ or v of the meter control switch to select "RCTA" and then press and hold OK.
- 3 Press OK to select the volume.

Each time the switch is pressed, the volume level will change between 1, 2, and 3.

■ Muting a buzzer temporarily

When an objects is detected, the temporary mute switch is displayed on the multimedia display system.

Select  to mute a buzzer of the intuitive parking assist*, RCTA and RCD* all together.

Mute will be canceled automatically in the following situations:

- When the shift lever is changed.
- When the vehicle speed exceeds a certain speed.
- When there is a malfunction in a

sensor or the system is temporarily unavailable.

- When the operating function is disabled manually.
- When the power switch is turned off.

*: If equipped

■ Conditions under which the system will not detect a vehicle

The RCTA function is not designed to detect the following types of vehicles and/or objects:

- Vehicles approaching from directly behind
- Vehicles backing up in a parking space next to your vehicle
- Vehicles that the sensors cannot detect due to obstructions

- Guardrails, walls, signs, parked vehicles and similar stationary objects*
- Small motorcycles, bicycles, pedestrians, etc.*
- Vehicles moving away from your vehicle
- Vehicles approaching from the parking spaces next to your vehicle*
- The distance between the sensor and approaching vehicle gets too close

*: Depending on the conditions, detection of a vehicle and/or object may occur.

■ Situations in which the system may not operate properly

The RCTA function may not detect

vehicles correctly in the following situations:

- When the sensor is misaligned due to a strong impact to the sensor or its surrounding area
- When mud, snow, ice, a sticker, etc., is covering the sensor or surrounding area on the rear bumper
- When driving on a road surface that is wet with standing water during bad weather, such as heavy rain, snow, or fog
- When multiple vehicles are approaching with only a small gap between each vehicle
- When a vehicle is approaching at high speed
- When equipment that may obstruct a sensor is installed, such as a towing eyelet, bumper protector (an additional trim strip, etc.), bicycle carrier, or snow plow
- When backing up on a slope with a sharp change in grade

- When backing out of a sharp angle parking spot

- Immediately after the RCTA function is turned on
- Immediately after the fuel cell system is started with the RCTA function on
- When the sensors cannot detect a vehicle due to obstructions
- When towing a trailer
- When there is a significant difference in height between your vehicle and the vehicle that enters the detection area
- When a sensor or the area around a sensor is extremely hot or cold
- If the suspension has been modified or tires of a size other than specified are installed
- If the front of the vehicle is raised or lowered due to the carried load
- When turning while backing up

- When a vehicle turns into the detection area

■ **Situations in which the system may operate even if there is no possibility of a collision**

Instances of the RCTA function unnecessarily detecting a vehicle and/or object may increase in the following situations:

- When the parking space faces a street and vehicles are being driven on the street

- When the distance between your vehicle and metal objects, such as a guardrail, wall, sign, or parked vehicle, which may reflect electrical waves toward the rear of the vehicle, is short

- When equipment that may obstruct a sensor is installed, such as a towing eyelet, bumper protector (an additional trim strip, etc.), bicycle carrier, or snow plow
- When a vehicle passes by the side of your vehicle

- When a detected vehicle turns

while approaching the vehicle

- When there are spinning objects near your vehicle such as the fan of an air conditioning unit
- When water is splashed or sprayed toward the rear bumper, such as from a sprinkler
- Moving objects (flags, exhaust fumes, large rain droplets or snowflakes, rain water on the road surface, etc.)
- When the distance between your vehicle and a guardrail, wall, etc., that enters the detection area is short
- Gratings and gutters
- When a sensor or the area around a sensor is extremely hot or cold
- If the suspension has been modified or tires of a size other than specified are installed
- If the front of the vehicle is raised or lowered due to the carried load

RCD (Rear Camera Detection) (Vehicles without Toyota Teammate Advanced Drive)*

*: If equipped

When the vehicle is backing up, the rear camera detection function can detect pedestrians in the detection area behind the vehicle. If a pedestrian is detected, a buzzer will sound and an icon will be displayed on the multimedia display to inform the driver of the pedestrian.

⚠ WARNING

■ Cautions regarding the use of the system

The recognition and control capabilities for this system are limited.

The driver should always drive safely by always being responsible without over relying on the system and have a understanding of the surrounding situations.

■ To ensure the system can operate properly

Observe the following, otherwise there is the danger that could lead to an accident.

- Always clean the camera without damaging it.
- Do not install market electronic parts (such as illuminated license plate, fog lamps, etc.) in the camera vicinity.

- Do not subject the camera vicinity to strong impacts. If the vicinity is subjected to a strong impact, have the vehicle inspected by your Toyota dealer.
- Do not disassemble, remodel or paint the camera.
- Do not attach accessories or stickers to the camera.
- Do not install market protection parts (bumper trim, etc.) to the rear bumper.
- Maintain suitable tire air pressure.
- Make sure the trunk is completely closed.

■ RCD function is turned off

In the following situations the system turns off. The RCD function may not operate properly and thus there is the danger that an accident may occur.

- The contents mentioned above are not observed.
- Suspensions other than Toyota genuine parts are installed.

System component

Location of the rear camera

RCD display

A Pedestrian detection icon
Displayed automatically when a pedestrian is detected behind the vehicle.

Turning the RCD function on/off

The RCD function can be enabled/disabled through a customize setting. (→P.688)

When the RCD function is disabled, the driving assist information indicator (→P.110) illuminates, and a message is displayed on the multi-information display.

Each time the power switch is turned off then changed to ON, the RCD function will be enabled automatically.

When a pedestrian is detected

If a pedestrian is in the area behind the vehicle or if the rear camera detected that a pedestrian is approaching the vehicle

from behind, the system urges caution from the driver by sounding the buzzer and displaying the detection of a pedestrian on the multimedia display as follows:

- A** If a pedestrian is detected in area **A**
Buzzer: Sounds repeatedly
Pedestrian detection icon: Blinks
- B** If a pedestrian is detected in area **B**
Buzzer (When the vehicle is stationary): Sounds 3 times
Buzzer (When the vehicle is backing up, when a pedestrian approaches the rear of the vehicle): Sounds repeatedly
Pedestrian detection icon: Blinks
- C** If the system determines that your vehicle may collide with a pedestrian in area **C**

Buzzer: Sounds repeatedly
 Pedestrian detection icon:
 Blinks

■ **The rear camera detection function is operational when**

- The power switch is in ON.
- RCD function is on.
- The shift position is in R.
- Advanced Park is not operating.

■ **Setting the buzzer volume**

The buzzer volume of the intuitive parking assist, RCTA, and RCD can all be changed at once from the customize settings. (→P.688)

■ **Muting a buzzer temporarily**

When an object is detected, the temporary mute switch is displayed on the multimedia display. Select the switch to mute a buzzer of the intuitive parking assist, RCTA and RCD all together.

Mute will be automatically canceled in the following situations:

- When the shift position is changed.
- When the vehicle speed exceeds a certain speed.
- When there is a malfunction in a sensor or the system is temporarily unavailable.
- When the operating function is disabled manually.
- When the power switch is turned off.

■ **Situations in which the system may not operate properly**

- Some pedestrians, such as the following, may not be detected by the rear camera detection function, preventing the function from operating properly:
 - Pedestrians who are bending forward or squatting
 - Pedestrians who are lying down
 - Pedestrians who are running

- Pedestrians who suddenly appear from the shadow of the vehicle or a building
- Pedestrians who are riding moving objects such as a bicycle or skateboard
- Pedestrians wearing oversized clothing such as a rain coat, long skirt, etc., making their silhouette obscure
- Pedestrians whose body is partially hidden by an object, such as a cart or umbrella
- Pedestrians which are obscured by darkness, such as at night
- In some situations, such as the following, pedestrians may not be detected by the rear camera detection function, preventing the function from operating properly:
 - When backing up in inclement weather (rain, snow, fog, etc.)
 - The lens is dirty (by dirt or snow-melting agent, etc.) or scratched
 - When a very bright light, such as the sun, or the headlights of another vehicle, shines directly into the rear camera
 - When backing up in a place where the surrounding brightness changes suddenly, such as at the entrance or exit of a garage or underground parking lot
 - When backing up in a dim environment such as during dusk or in an underground parking lot
 - When the camera position and direction are deviated
 - When a towing hook is attached
 - When water droplets are flowing on the camera lens
 - When the vehicle height is extremely changed (nose up, nose down, etc.)
 - When tire chains or an emergency tire puncture repair kit are used
 - When the suspension has been lowered or tires that have a different size than the genuine tires are installed
 - When an aftermarket electronic part (backlit license plate, fog light, etc.) is installed near the rear camera

- If a bumper protector, such as an additional trim strip, is installed to the rear bumper
- When towing with the vehicle
- **Situations in which the system may operate unexpectedly**
 - Even though there are no pedestrians in the detection area, some objects, such as the following, may be detected, possibly causing the rear camera detection function to operate.
 - Three dimensional objects, such as a pole, traffic cone, fence, or parked vehicle
 - Moving objects, such as a car or motorcycle
 - Objects moving toward your vehicle when backing up, such as flags or puddles (or airborne matter, such as smoke, steam, rain, or snow)
 - Cobblestone or gravel roads, tram rails, road repairs, white lines, pedestrian crossings or fallen leaves on the road
 - Metal covers (gratings), such as those used for drainage ditches
 - Objects reflected in a puddle or on a wet road surface
 - Shadows on the road
 - In some situations, such as the following, the rear camera detection function may operate even though there are no pedestrians in the detection area.
 - When backing up toward the roadside or a bump on the road
 - When backing up toward an incline/decline
 - When the vehicle height is extremely changed (nose up, nose down, etc.)
 - When an aftermarket electronic part (backlit license plate, fog light, etc.) is installed near the rear camera
 - If a bumper protector, such as an additional trim strip, is installed to the rear bumper
 - If the orientation of the rear camera has been changed due to a collision or other impact, or removal and installation
- If a towing eyelet is installed to the rear of the vehicle
- When water is flowing over the rear camera lens
- The lens is dirty (by dirt or snow-melting agent, etc.)
- If there is a flashing light in the detection area, such as the emergency flashers of another vehicle
- When tire chains or an emergency tire puncture repair kit are used
- When towing with the vehicle
- Situations in which the rear camera detection function may be difficult to notice
 - The buzzer may be difficult to hear if the surrounding area is noisy or the audio system volume is high.
 - If the temperature in the cabin is extremely high or low, the multimedia display may not operate correctly.

RCD (Rear Camera Detection) (Vehicles with Toyota Teammate Advanced Drive)*

*: If equipped

When the vehicle is backing up, the rear camera detection function can detect pedestrians in the detection area behind the vehicle. If a pedestrian is detected, a buzzer will sound and an icon will be displayed on the multimedia display to inform the driver of the pedestrian.

⚠ WARNING

■ Cautions regarding the use of the system

The recognition and control capabilities for this system are limited.

The driver should always drive safely by always being responsible without over relying on the system and have a understanding of the surrounding situations.

■ To ensure the system can operate properly

Observe the following, otherwise there is the danger that could lead to an accident.

- Always clean the camera without damaging it.
- Do not install market electronic parts (such as illuminated license plate, fog lamps, etc.) in the camera vicinity.

- Do not subject the camera vicinity to strong impacts. If the vicinity is subjected to a strong impact, have the vehicle inspected at a Toyota dealer.
- Do not disassemble, remodel or paint the camera.
- Do not attach accessories or stickers to the camera.
- Do not install market protection parts (bumper trim, etc.) to the rear bumper.
- Maintain suitable tire air pressure.
- Make sure the trunk is completely closed.

■ RCD function is turned off

In the following situations the system turns off. The RCD function may not operate properly and thus there is the danger that an accident may occur.

- The contents mentioned above are not observed
- Suspensions other than Toyota genuine parts are installed

System components

Location of the rear camera

Display of RCD

A Pedestrian detection icon
Displayed automatically when a pedestrian is detected.

Turning the RCD function on/off

Use the meter control switches to enable/disable the RCD function. (→P.144)

- 1 Press < or > to select .
- 2 Press ^ or v to select “RCD” and then press OK.

When the RCD function is disabled, the RCD OFF indicator (→P.138) illuminates.

Each time the power switch is turned ON, the RCD function will be enabled automatically.

When a pedestrian is detected

If the rear camera detection function detects a pedestrian in the detection area, the buzzer and pedestrian detection will operate as follows:

- A** If a pedestrian is detected in area **A**
Buzzer: Sounds repeatedly
Pedestrian detection icon: Blinks
- B** If a pedestrian is detected in area **B**
Buzzer (When the vehicle is stationary): Sounds 3 times
Buzzer (When the vehicle is backing up, when a pedestrian approaches the rear of the vehicle): Sounds repeatedly
Pedestrian detection icon: Blinks
- C** If the system determines that your vehicle may collide with a pedestrian in area **C**
Buzzer: Sounds repeatedly
Pedestrian detection icon: Blinks

■ The rear camera detection function is operational when

- The power switch is in ON.

- RCD function is on.
- The shift position is in R.
- Advanced Park is not operating.

■ Setting the buzzer volume

The buzzer volume can be adjusted on the multi-information display.

Use the meter control switches to change settings. (→P.144)

■ Muting a buzzer temporarily

When an object is detected, the temporary mute switch is displayed on the multimedia display system.

Select  to mute a buzzer of the intuitive parking assist, RCTA and RCD all together.

Mute will be canceled automatically in the following situations:

- When the shift lever is changed.
- When the vehicle speed exceeds a certain speed.
- When there is a malfunction in a sensor or the system is temporarily unavailable.
- When the operating function is disabled manually.
- When the power switch is turned off.

■ If “Rear Camera Detection Unavailable Remove the Dirt of Rear Camera” is displayed on the multi-information display

The rear camera lens may be dirty or covered with snow or ice. In such cases, if it is removed from the rear camera lens, the system should return to normal. (It may be necessary to drive the vehicle for some time before the system returns to normal.)

■ If “Rear Camera Detection Unavailable” is displayed on the multi-information display

- If the trunk is not fully closed, close the trunk tightly.
- If this message is displayed only

when the R shift position is selected, the rear camera lens may be dirty. Clean the rear camera lens.

■ Situations in which the system may not operate properly

- Some pedestrians, such as the following, may not be detected by the rear camera detection function, preventing the function from operating properly:
 - Pedestrians who are bending forward or squatting
 - Pedestrians who are lying down
 - Pedestrians who are running
 - Pedestrians who suddenly enter the detection area
 - People riding a bicycle, skateboard, or other light vehicle
 - Pedestrians wearing oversized clothing such as a rain coat, long skirt, etc., making their silhouette obscure
 - Pedestrians whose body is partially hidden by an object, such as a cart or umbrella
 - Pedestrians which are obscured by darkness, such as at night
- In some situations, such as the following, pedestrians may not be detected by the rear camera detection function, preventing the function from operating properly:
 - When backing up in inclement weather (rain, snow, fog, etc.)
 - When the rear camera is obscured (dirt, snow, ice, etc., are attached) or scratched
 - When a very bright light, such as the sun, or the headlights of another vehicle, shines directly into the rear camera
 - When backing up in a place where the surrounding brightness changes suddenly, such as at the entrance or exit of a garage or underground parking lot
 - When backing up in a dim environment such as during dusk or in an underground parking lot
 - When the camera position and direction are deviated
 - When a towing hook is attached

- When water droplets are flowing on the camera lens
 - When the vehicle height is extremely changed (nose up, nose down).
 - When tire chains or an emergency tire puncture repair kit is used
 - If the suspension has been modified or tires of a size other than specified are installed
 - If an electronic component, such as a backlit license plate or rear fog light, is installed near the rear camera
 - If a bumper protector, such as an additional trim strip, is installed to the rear bumper
- **Situations in which the system may operate unexpectedly**
- Even though there are no pedestrians in the detection area, some objects, such as the following, may be detected, possibly causing the rear camera detection function to operate.
 - Three dimensional objects, such as a pole, traffic cone, fence, or parked vehicle
 - Moving objects, such as a car or motorcycle
 - Objects moving toward your vehicle when backing up, such as flags or puddles (or airborne matter, such as smoke, steam, rain, or snow)
 - Cobblestone or gravel roads, tram rails, road repairs, white lines, pedestrian crossings or fallen leaves on the road
 - Metal covers (gratings), such as those used for drainage ditches
 - Objects reflected in a puddle or on a wet road surface
 - Shadows on the road
 - In some situations, such as the following, the rear camera detection function may operate even though there are no pedestrians in the detection area.
 - When backing up toward the roadside or a bump on the road
 - When backing up toward an incline/decline
 - If the rear of the vehicle is raised or lowered due to the carried load
 - If a bumper protector, such as an additional trim strip, is installed to the rear bumper
 - If the orientation of the rear camera has been changed
 - If a towing eyelet is installed to the rear of the vehicle
 - When water is flowing over the rear camera lens
 - When the rear camera is obscured (dirt, snow, ice, etc., are attached) or scratched
 - If there is a flashing light in the detection area, such as the emergency flashers of another vehicle
 - When a tire chains or an emergency tire puncture repair kit is used
 - Situations in which the rear camera detection function may be difficult to notice
 - The buzzer may be difficult to hear if the surrounding area is noisy, the volume of the audio system volume is high, the air conditioning system is being used, etc.
 - If the temperature in the cabin is extremely high or low, the audio system screen may not operate correctly.

PKSB (Parking Support Brake) (Vehicles without Toyota Teammate Advanced Drive)*

*: If equipped

The PKSB (Parking Support Brake) is a system that issues warnings and automatically performs braking to help reduce collision damage with operation targets that were detected when traveling at a low speed such as when parking.

PKSB (Parking Support Brake) system

The system has detected the following as operation targets. (The operation targets vary depending on the function.)

- Parking Support Brake function (static objects front and rear of the vehicle):
→P.393
- Parking Support Brake function (moving vehicles rear of the vehicle):
→P.401
- Parking Support Brake function (pedestrians rear of the vehicle):
→P.404
- Parking Support Brake function (static objects around the

vehicle) (vehicles with the Advanced Park):
→P.394

⚠ WARNING

■ Cautions regarding the use of the system

- Do not overly rely on the system, as doing so may lead to an accident.
- Always drive while checking the safety of the surroundings of the vehicle.
- Depending on the vehicle and road conditions, weather, etc., the system may not operate.
- The detection capabilities of sensors and radars are limited. Always drive while checking the safety of the surroundings of the vehicle.
- The driver is solely responsible for safe driving. Always drive carefully, taking care to observe your surroundings. The Parking Support Brake system is designed to provide support to lessen the severity of collisions. However, it may not operate in some situations.
- The Parking Support Brake system is not designed to stop the vehicle completely. Additionally, even if the system has stopped the vehicle, it is necessary to depress the brake pedal immediately as brake control will be canceled after approximately 2 seconds.
- It is extremely dangerous to check the system operations by intentionally driving the vehicle into the direction of a wall, etc. Never attempt such actions.

⚠ WARNING**■ When to disable the Parking Support Brake**

In the following situations, disable the Parking Support Brake as the system may operate even though there is no possibility of a collision.

- When inspecting the vehicle using a chassis roller, chassis dynamo or free roller
- When loading the vehicle onto a boat, truck or other transport vessel
- If the suspension has been modified or tires of a size other than specified are installed
- If the front of the vehicle is raised or lowered due to the carried load
- When equipment such as a towing hook, transport hook, bumper protector, bumper trim, bicycle carrier or snow-removal device (snow plow) is installed near the sensor
- When using automatic car washing devices
- If the vehicle cannot be driven in a stable manner, such as when the vehicle has been in an accident or is malfunctioning
- When the vehicle is driven in a sporty manner or off-road
- When the tires are not properly inflated
- When the tires are very worn
- When tire chains, a compact spare tire or an emergency tire puncture repair kit are used.
- When towing with the vehicle

■ Precautions for the suspension

Do not modify the suspension of the vehicle. If the height or tilt of the vehicle is changed, the sensors may not be able to detect detectable objects and the system may not operate correctly, possibly leading to an accident.

Enabling/Disabling the Parking Support Brake

The Parking Support Brake function can be enabled/disabled through a customize setting. (→P.689)

When the PKSB (Parking Support Brake) is disabled, the driving assist information indicator (→P.110) illuminates, and a message is displayed on the multi-information display.

If the system switches to OFF (disabled) and the PKSB (Parking Support Brake) is stopped, the PKSB (Parking Support Brake) will not be re-enabled until ON (enabled) is selected again from the customize setting (→P.689).

(It remains off even if the power switch is turned to ON again after the power switch has been turned off.)

Display and buzzer for fuel cell system output restriction control and brake control

If the fuel cell system output restriction control or brake control operates, a buzzer will sound and a message will be displayed on the multimedia display and multi-information display, to alert the driver.

Depending on the situation, output restriction control operates to either limit acceleration or restrict output as much as possible.

- Fuel cell system output restriction control is operating (acceleration restriction)

Acceleration greater than a certain amount is restricted by the system.

Multimedia display: No warning displayed

Multi-information display: "Object Detected Acceleration Reduced"

Driving assist information indicator: Not illuminated

Buzzer: Does not sound

- Fuel cell system output restriction control is operating (output restricted as much as possible)

The system has determined that stronger-than-normal brake operation is necessary.

Multimedia display (vehicles with panoramic view monitor): "BRAKE!"

Multi-information display: "BRAKE!"

Driving assist information indicator: Not illuminated

Buzzer: Short beep

- Brake control is operating

The system determined that emergency braking is necessary.

Multimedia display (vehicles with panoramic view monitor): "BRAKE!"

Multi-information display: "BRAKE!"

Driving assist information indicator: Not illuminated

Buzzer: Short beep

- Vehicle stopped by system operation

The vehicle has been stopped by brake control operation.

Multimedia display (vehicles with panoramic view monitor): "Switch to Brake"

Multi-information display: "Accelerator Pedal is Pressed Press Brake Pedal"

If the accelerator pedal is not depressed, "Press Brake Pedal" will be displayed.

Driving assist information indicator: Illuminated

Buzzer: Sounds repeatedly

System overview

If the Parking Support Brake determines that a collision with a detected object or pedestrian is possible, the fuel cell system output will be restricted to restrain any increase in the vehicle speed. (Fuel cell system output restriction control: See figure 2 below.)

Additionally, if the accelerator

pedal continues to be depressed, the brakes will be applied automatically to reduce the vehicle speed. (Brake control: See figure 3.)

- Figure 1: When the PKSB (Parking Support Brake) is not operating

- A Fuel cell system output
- B Braking force
- C Time

- Figure 2: When fuel cell system output restriction control operates

- A Fuel cell system output
- B Braking force
- C Time
- D Fuel cell system output restriction control begins

operating (System determines that possibility of collision with detected object is high)

- Figure 3: When fuel cell system output restriction control and brake control operates

- A Fuel cell system output
- B Braking force
- C Time
- D Fuel cell system output restriction control begins operating (System determines that possibility of collision with detected object is high)
- E Brake control begins operating (System determines that possibility of collision with detected object is extremely high)

■ If the Parking Support Brake has operated

If the vehicle is stopped due to operation of the Parking Support Brake, the Parking Support Brake will be disabled and the driving assist information indicator will illuminate.

In addition, even when the PKSB

(Parking Support Brake) operates, the brake control is canceled after approximately 2 seconds to start off.

Furthermore, the brake control also can be canceled by depressing the brake pedal. Depressing the accelerator pedal again after that allows the vehicle to start off.

■ Re-enabling the Parking Support Brake

To re-enable the Parking Support Brake when it is disabled due to operation of the PKSB (Parking Support Brake), either enable the system again, or turn the power switch off and then back to ON.

Additionally, if any of the following conditions are met, the system will be re-enabled automatically and the driving assist information indicator will turn off (→P.110):

- The P shift position is selected
- Drive with no operation targets in the traveling direction of the vehicle
- Change the traveling direction of the vehicle

■ Buzzer

Regardless of whether the intuitive parking assist sensor is enabled or not (→P.346), if the PKSB (Parking Support Brake) system is enabled (→P.385), the buzzer will sound to notify the driver of the approximate distance to the object when the brake control and the fuel cell system output restriction control are operated.

PKSB (Parking Support Brake) (Vehicles with Toyota Teammate Advanced Drive)*

*: If equipped

The Parking Support Brake system consists of the following functions that operate when driving at a low speed or backing up, such as when parking. When the system determines that the probability of a collision with a detected object or pedestrian is high, a warning operates to urge the driver to take evasive action. If the system determines that the possibility of a collision with a detected object or pedestrian is extremely high, the brakes are automatically applied to help avoid the collision or help reduce the impact of the collision.

PKSB (Parking Support Brake) system

- Parking Support Brake function (static objects front and rear of the vehicle/static objects around the vehicle*)

→P.397

■ **Parking Support Brake function (moving vehicles rear of the vehicle)**

→P.402

■ **Parking Support Brake function (pedestrians rear of the vehicle)**

→P.406

* : If equipped

 **WARNING**

■ **Cautions regarding the use of the system**

Do not overly rely on the system, as doing so may lead to an accident.

Always drive while checking the safety of the surroundings of the vehicle.

Depending on the vehicle and road conditions, weather, etc., the system may not operate.

The detection capabilities of sensors and radars are limited. Always drive while checking the safety of the surroundings of the vehicle.

- The driver is solely responsible for safe driving. Always drive carefully, taking care to observe your surroundings. The Parking Support Brake system is designed to provide support to lessen the severity of collisions. However, it may not operate in some situations.
- The Parking Support Brake system is not designed to stop the vehicle completely. Additionally, even if the system has stopped the vehicle, it is necessary to depress the brake pedal immediately as brake control will be canceled after approximately 2 seconds.

- It is extremely dangerous to check the system operations by intentionally driving the vehicle into the direction of a wall, etc. Never attempt such actions.

■ **When to disable the Parking Support Brake**

In the following situations, disable the Parking Support Brake as the system may operate even though there is no possibility of a collision.

- When inspecting the vehicle using a chassis roller, chassis dynamo or free roller
- When loading the vehicle onto a boat, truck or other transport vessel
- If the suspension has been modified or tires of a size other than specified are installed
- If the front of the vehicle is raised or lowered due to the carried load
- When equipment that may obstruct a sensor is installed, such as a towing eyelet, bumper protector (an additional trim strip, etc.), bicycle carrier, or snow plow
- When using automatic car washing devices
- If the vehicle cannot be driven in a stable manner, such as when the vehicle has been in an accident or is malfunctioning
- When the vehicle is driven in a sporty manner or off-road
- When the tires are not properly inflated
- When the tires are very worn

⚠ WARNING

- When a tire chains, compact spare tire or an emergency tire puncture repair kit is used
- When towing with the vehicle
- **Precautions for the suspension**
Do not modify the suspension of the vehicle. If the height or tilt of the vehicle is changed, the sensors may not be able to detect detectable objects and the system may not operate correctly, possibly leading to an accident.

To re-enable the system when it was disabled, select  on the multi-information display, select “ PKSB” and then On. If disabled using this method, the system will not be re-enabled by turning the power switch off and then to ON.

Display and buzzer for fuel cell system output restriction control and brake control

Enabling/Disabling the Parking Support Brake

The Parking Support Brake can be enabled/disabled on the multi-information display. All of the Parking Support Brake functions (static objects front and rear of the vehicle, moving vehicles rear of the vehicle, pedestrians rear of the vehicle and static objects around the vehicle) are enabled/disabled simultaneously.

Use the meter control switches to enable/disable the parking support brake. (→P.144)

- 1 Press  or  to select .
- 2 Press  or  to select “ PKSB” and then press **OK**.

When the Parking Support Brake is disabled, the PKSB OFF indicator (→P.138) illuminates.

If the fuel cell system output restriction control or brake control operates, a buzzer will sound and a message will be displayed on the multi-information display and head-up display (if equipped), multimedia display, to alert the driver.

Depending on the situation, fuel cell system output restriction control will operate to either limit acceleration or restrict output as much as possible.

- Fuel cell system output restriction control is operating (acceleration restriction)

Acceleration greater than a certain amount is restricted by the system.

Multimedia display: No warning displayed

Multi-information display: “Object Detected Acceleration Reduced”

Head-up display (if equipped): No warning displayed

PKSB OFF indicator: Not illuminated

Buzzer: Does not sound

- Fuel cell system output restriction control is operating (output restricted as much as possible)

The system has determined that stronger-than-normal brake operation is necessary.

Multimedia display: "BRAKE!"
 Multi-information display: "BRAKE!"
 Head-up display (if equipped): "BRAKE!"
 PKSB OFF indicator: Not illuminated
 Buzzer: Short beep

- Brake control is operating

The system determined that emergency braking is necessary.

Multimedia display: "BRAKE!"
 Multi-information display: "BRAKE!"
 Head-up display (if equipped): "BRAKE!"
 PKSB OFF indicator: Not illuminated
 Buzzer: Short beep

- Vehicle stopped by system operation

The vehicle has been stopped by brake control operation.

Multimedia display: "Switch to Brake" (If the accelerator pedal is not depressed, "Press Brake Pedal" will be displayed.)

Multi-information display: "Switch to Brake" (If the accelerator pedal is not depressed, "Brake" will be displayed.)

Head-up display (if equipped): "Switch to Brake" (If the accelerator

pedal is not depressed, "Press Brake Pedal" will be displayed.)
 PKSB OFF indicator: Illuminated
 Buzzer: Sounds repeatedly

System overview

If the Parking Support Brake determines that a collision with a detected object or pedestrian is possible, the fuel cell system output will be restricted to restrain any increase in the vehicle speed. (Fuel cell system output restriction control: See figure 2.)

Additionally, if the accelerator pedal continues to be depressed, the brakes will be applied automatically to reduce the vehicle speed. (Brake control: See figure 3.)

- Figure 1 When the PKSB (Parking Support Brake) is not operating

- A Fuel cell system output
- B Braking force
- C Time

- Figure 2 When fuel cell sys-

tem output restriction control operates

- A** Fuel cell system output
- B** Braking force
- C** Time
- D** Fuel cell system output restriction control begins operating (System determines that possibility of collision with detected object is high)

● Figure 3 When fuel cell system output restriction control and brake control operates

- A** Fuel cell system output
- B** Braking force
- C** Time
- D** Fuel cell system output restriction control begins operating (System determines that possibility of collision with detected object is high)

operating (System determines that possibility of collision with detected object is high)

- E** Brake control begins operating (System determines that possibility of collision with detected object is extremely high)

■ **If the Parking Support Brake has operated**

If the vehicle is stopped due to operation of the Parking Support Brake, the Parking Support Brake will be disabled and the PKSB OFF indicator will illuminate. If the Parking Support Brake operates unnecessarily, brake control can be canceled by depressing the brake pedal or waiting for approximately 2 seconds for it to automatically be canceled. Then, the vehicle can be operated by depressing the accelerator pedal.

■ **Re-enabling the Parking Support Brake**

To re-enable the Parking Support Brake when it has been disabled due to operation of the Parking Support Brake, either enable the system again (→P.390), or turn the power switch off and then back to ON.

Additionally, if any of the following conditions are met, the system will be re-enabled automatically and the PKSB OFF indicator will turn off:

- The P shift position is selected
- The object is no longer detected in the traveling direction of the vehicle
- The traveling direction of the vehicle changes*

*: Except when the Pedestrian Rear of the Vehicle operated.

■ **If “PKSB Unavailable” is displayed on the multi-information display and the PKSB OFF indicator is on**

If the vehicle is stopped due to operation of the Parking Support Brake, the Parking Support Brake will be disabled and the PKSB OFF indicator will illuminate.

- A sensor may be covered with water drops, ice, snow, dirt, etc. Remove the water drops, ice, snow, dirt, etc., from the sensor to return the system to normal. Also, due to ice forming on a sensor at low temperatures, a warning message may be displayed or the sensor may not be able to detect an object. Once the ice melts, the system will return to normal.
- If this message is displayed only when the R shift position is selected, the rear camera lens may be dirty. Clean the camera lens. If this message is displayed when the shift position is any position other than R, a sensor on the front or rear bumper may be dirty. Clean the sensors and their surrounding area on the bumpers.
- If this message continues to be displayed even after cleaning the sensor, or is displayed even though the sensor is clean, have the vehicle inspected by your Toyota dealer.

■ **Intuitive parking assist buzzer**

Regardless of whether the Intuitive parking assist buzzer is enabled or not, if the PKSB (Parking Support Brake) system is enabled, the front or rear sensors detect a static object and brake control is performed, the Intuitive parking assist buzzer will sound to notify the driver of the approximate distance to the object.

Parking Support Brake function (static objects front and rear of the vehicle/static objects around the vehicle) (Vehicles without Toyota Teammate Advanced Drive)*

*: If equipped

If the sensors detect a static object, such as a wall, in the traveling direction of the vehicle and the system determines that a collision may occur due to the vehicle suddenly moving forward due to an accidental accelerator pedal operation, the vehicle moving the unintended direction due to the wrong shift position being selected, or while parking or traveling at low speeds, the system will operate to lessen the impact with the detected static object and reduce the resulting damage.

Examples of function operation (static objects front and rear of the vehicle)

This function will operate in situations such as the following if an object is detected in the traveling direction of the vehicle.

- When traveling at a low speed and the brake pedal is not depressed, or is depressed late

- When the vehicle moves forward due to the incorrect shift position being selected

- When the accelerator pedal is depressed excessively

Examples of function operation (static objects around the vehicle) (vehicles with Advanced Park)

The system will operate in the following situations when a stationary object is detected in the surrounding area.

- When moving forward and a collision with a stationary object on the inner side of a turn is likely

- When reversing and a collision with a stationary object on the outer side of a turn is likely

Types of sensors

→P.345

⚠ WARNING

- To ensure the system can operate properly

→P.346

- If the Parking Support Brake function operates unnecessarily, such as at a railroad crossing

→P.387

- Notes when washing the vehicle

→P.347

- The Parking Support Brake function (static objects front and rear of the vehicle) will operate when

The function will operate when the driving assist information indicator is not illuminated (→P.108, 110) and all of the following conditions are met:

- Fuel cell system output restriction control
- The Parking Support Brake is enabled.
- The vehicle speed is approximately 9 mph (15 km/h) or less.
- There is a static object in the traveling direction of the vehicle and approximately 6 to 13 ft. (2 to 4 m) away.
- The Parking Support Brake determines that a stronger-than-normal brake operation is necessary to avoid a collision.
- Brake control
- Fuel cell system output restriction control is operating.
- The Parking Support Brake determines that an immediate brake operation is necessary to avoid a collision.

■ **The Parking Support Brake function (static objects around the vehicle) will operating when (Vehicles with Advanced Park)**

This function is operable when any of the following conditions is met in addition to the operating conditions for static objects in front and rear of the vehicle.

- After the fuel cell system has been started, the vehicle has moved approximately 23.0 ft. (7 m) or less
- The R shift position is selected
- After the shift position has been changed from R to D, the vehicle has moved approximately 23.0 ft. (7 m) or less

■ **The Parking Support Brake function (static objects front and rear of the vehicle/static objects around the vehicle) will stop operating when**

The function will stop operating if any of the following conditions are met:

- Fuel cell system output restriction control
- The Parking Support Brake is disabled.
- The system determines that the collision has become avoidable with normal brake operation.
- The static object is no longer approximately 6 to 13 ft. (2 to 4 m) away from the vehicle or in the traveling direction of the vehicle.
- Brake control
 - The Parking Support Brake is disabled.
 - Approximately 2 seconds have elapsed since the vehicle was stopped by brake control.
 - The brake pedal is depressed after the vehicle is stopped by brake control.
 - The static object is no longer approximately 6 to 13 ft. (2 to 4 m) away from the vehicle or in the traveling direction of the vehicle.

■ **Detection range of the Parking Support Brake function (static objects front and rear of the vehicle/static objects around the vehicle)**

The detection range of the Parking Support Brake function (static objects front and rear of the vehicle/static objects around the vehicle) differs from the detection range of the intuitive parking assist. (→P.349) Therefore, even if the intuitive parking assist detects an object and provides a warning, the Parking Support Brake function (static objects front and rear of the vehicle/static objects around the vehicle) may not start operating.

■ **Situations in which the system may not operate properly**

→P.347

■ **Situations in which the system may operate even if there is no possibility of a collision**

→P.348

■ **Situations in which the system may operate even though there is no possibility of a collision (static objects around the vehicle) (vehicles with Advanced Park)**

In addition to the situations in which static objects in front and rear of the vehicle (→P.395) may not be detected, objects may not be detected by the sensors in the following situations:

- When moving sideways, such as when parallel parking (→P.421)
- **Detection of objects along the sides of the vehicle (static objects around the vehicle) (vehicles with Advanced Park)**
 - Objects along the sides of the vehicle are not instantaneously detected. The location of objects in relation to the vehicle is estimated after they are first detected by the front or rear side sensors, or side cameras. Therefore, after

the power switch is changed to ON, even if an object is along the side of the vehicle, it may not be detected until the vehicle has been driven a small amount and the side sensors or side cameras completely scan the areas along the sides of the vehicle.

- If a vehicle, person, animal, etc., is detected by a side sensors or side cameras, but then leaves the detection area of the side sensors or side cameras, the system will assume the object has not moved.

Parking Support Brake function (static objects front and rear of the vehicle/static objects around the vehicle*) (Vehicles with Toyota Teammate Advanced Drive)

*: If equipped

If the sensors detect a static object, such as a wall, in the traveling direction of the vehicle and the system determines that a collision may occur due to the vehicle suddenly moving forward due to an accidental accelerator pedal operation, the vehicle moving the unintended direction due to the wrong shift position being selected, or while parking or traveling at low speeds, the system will operate to lessen the impact with the detected static object and reduce the resulting damage.

Examples of function operation (static objects front and rear)

This function will operate in situations such as the following if an object is detected in the traveling direction of the vehicle.

- When traveling at a low speed and the brake pedal is not depressed, or is depressed late

- When the vehicle moves in the unintended direction due to the wrong shift position being selected

- When the accelerator pedal is depressed excessively

Examples of function operation (static objects around the vehicle) (vehicles with the Advanced Park)

The system will operate in the following situations when a stationary object is detected in the surrounding area.

- When moving forward and a collision with a stationary object on the inner side of a turn is likely

- When reversing and a collision with a stationary object on the outer side of a turn is likely

Types of sensors

→P.354

⚠ WARNING

- To ensure the system can operate properly
→P.356
- If the PKSB (Parking Support Brake) system operates unnecessarily, such as at a railroad crossing
→P.392
- Notes when washing the vehicle
→P.356

- The Parking Support Brake function (static objects front and rear) will operate when

The function will operate when the PKSB OFF indicator is not illuminated (→P.136, 138) and all of the following conditions are met:

- Fuel cell system output restriction control
- The Parking Support Brake is enabled.
- The vehicle speed is approximately 9 mph (15 km/h) or less.
- There is a static object in the traveling direction of the vehicle and approximately 6 to 13 ft. (2 to 4 m) away.
- The Parking Support Brake determines that a stronger-than-normal brake operation is necessary to avoid a collision.
- Brake control
- Fuel cell system output restriction control is operating.
- The Parking Support Brake determines that an immediate brake operation is necessary to avoid a collision.

- The Parking Support Brake function (static objects around the vehicle) (vehicles with the Advanced Park) will operate when

This function is operable when any

of the following conditions are met in addition to the operating conditions for stationary objects front and rear.

- After the fuel cell system has been started, the vehicle has moved approximately 23.0 ft. (7 m) or less
- The R shift position is selected
- After the shift position has been changed from R to D, the vehicle has moved approximately 23.0 ft. (7 m) or less

■ **The Parking Support Brake function (static objects front and rear/static objects around the vehicle) will stop operating when**

The function will stop operating if any of the following conditions are met:

- Fuel cell system output restriction control
- The Parking Support Brake is disabled.
- The system determines that the collision has become avoidable with normal brake operation.
- The static object is no longer approximately 6 to 13 ft. (2 to 4 m) away from the vehicle or in the traveling direction of the vehicle.
- Brake control
 - The Parking Support Brake is disabled.
 - Approximately 2 seconds have elapsed since the vehicle was stopped by brake control.
 - The brake pedal is depressed after the vehicle is stopped by brake control.
 - The static object is no longer approximately 6 to 13 ft. (2 to 4 m) away from the vehicle or in the traveling direction of the vehicle.

■ **Detection range**

The detection range of the Parking Support Brake function (static objects front and rear of the vehicle/static objects around the vehicle) differs from the detection range of

the intuitive parking assist. (→P.359)
Therefore, even if the intuitive parking assist detects an object and provides a warning, the PKSB (Parking Support Brake) may not start operating.

■ **Objects which the system may not be properly detected**

→P.357

■ **Side sensors and side cameras**

→P.364

■ **Situations in which the system may not operate properly**

→P.357

■ **Situations in which the system may operate even if there is no possibility of a collision**

→P.358

■ **Situations in which the system may operate even though there is no possibility of a collision (static objects around the vehicle) (vehicle with the Advanced Park)**

In addition to the situations in which stationary objects front and rear (→P.399) may not be detected, objects may not be detected by the sensors in the following situation:

- When moving sideways, such as when parallel parking

Parking Support Brake function (moving vehicles rear of the vehicle) (Vehicles without Toyota Teammate Advanced Drive)*

*: If equipped

If a rear radar sensor detects a vehicle approaching from the right or left at the rear of the vehicle and the system determines that the possibility of a collision is high, this function will perform brake control to reduce the likelihood of an impact with the approaching vehicle.

Examples of the function operation

This function will operate in situations such as the following if a vehicle is detected in the traveling direction of the vehicle.

- **When reversing, a vehicle is approaching and the brake pedal is not depressed, or is depressed late**

Types of sensors

→P.331

⚠ WARNING

■ **To ensure the system can operate properly**

→P.331

- **The Parking Support Brake function (moving vehicles rear of the vehicle) will operate when**

The function will operate when the driving assist information indicator is not illuminated (→P.108, 110) and all of the following conditions are met:

- Fuel cell system output restriction control
- The Parking Support Brake is enabled.
- The vehicle speed is approximately 9 mph (15 km/h) or less.
- Vehicles are approaching from the right or left at the rear of the vehicle at a traveling speed of approximately 5 mph (8 km/h) or more.
- The shift position is in R.
- The Parking Support Brake determines that a stronger than normal brake operation is necessary to

avoid a collision with an approaching vehicle.

- Brake control
- Fuel cell system output restriction control is operating.
- The Parking Support Brake determined that an emergency brake operation was necessary to avoid a collision with a vehicle approaching from the rear.

■ **The Parking Support Brake function (moving vehicles rear of the vehicle) will stop operating when**

The function will stop operating if any of the following conditions are met:

- Fuel cell system output restriction control
- The Parking Support Brake is disabled.
- The collision becomes avoidable with normal brake operation.
- A vehicle is no longer approaching from the right or left at the rear of the vehicle.
- Brake control
- The Parking Support Brake is disabled.
- Approximately 2 seconds have elapsed since the vehicle was stopped by brake control.
- The brake pedal is depressed after the vehicle is stopped by brake control.

■ **Situations in which the system may not operate properly**

→P.368

■ **Situations in which the system may operate even if there is no possibility of a collision**

→P.369

Parking Support Brake function (moving vehicle rear of the vehicle) (Vehicles with Toyota Teammate Advanced Drive)*

*: If equipped

If a rear radar sensor detects a vehicle approaching from the right or left at the rear of the vehicle and the system determines that the possibility of a collision is high, this function will perform brake control to reduce the likelihood of an impact with the approaching vehicle.

Examples of function operation

This function will operate in situations such as the following if a vehicle is detected in the traveling direction of the vehicle.

■ **When reversing, a vehicle is approaching and the brake pedal is not depressed, or is depressed late**

Types of sensors

→P.336

⚠ WARNING

■ **To ensure the system can operate properly**

→P.336

■ **The system will operate when**

The function will operate when the PKSB OFF indicator is not illuminated (→P.136, 138) and all of the following conditions are met:

- Fuel cell system output restriction control
 - The Parking Support Brake is enabled.
 - The vehicle speed is approximately 9 mph (15 km/h) or less.
 - Vehicles are approaching from the right or left at the rear of the vehicle at a traveling speed of approximately 5 mph (8 km/h) or more.
 - The shift position is in R.
 - The Parking Support Brake determines that a stronger than normal brake operation is necessary to avoid a collision with an approaching vehicle.
- Brake control
 - Fuel cell system output restriction

control is operating.

- The Parking Support Brake determines that an emergency brake operation is necessary to avoid a collision with an approaching vehicle.

■ **The system will stop operating when**

The function will stop operating if any of the following conditions are met:

- Fuel cell system output restriction control
- The Parking Support Brake is disabled.
- The collision becomes avoidable with normal brake operation.
- A vehicle is no longer approaching from the right or left at the rear of the vehicle.
- Brake control
 - The Parking Support Brake is disabled.
 - Approximately 2 seconds have elapsed since the vehicle was stopped by brake control.
 - The brake pedal is depressed after the vehicle is stopped by brake control.
 - A vehicle is no longer approaching from the right or left at the rear of the vehicle.

■ **Detection range**

The detection range of the moving vehicles rear of the vehicle differs from the detection area of the RCTA function (→P.372). Therefore, even if the RCTA function detects a vehicle and provides an alert, the moving vehicles rear of the vehicle may not start operating.

■ **RCTA buzzer**

Regardless of weather the RCTA function is on or off, if the PKSB (Parking Support Brake) system is not disabled, when the brake control operates, the buzzer will sounds to alert the driver.

■ **Situations in which the system may not operate properly**

→P.373

■ **Situations in which the system may operate even if there is no possibility of a collision**

→P.375

Parking Support Brake function (pedestrians rear of the vehicle) (Vehicles without Toyota Teammate Advanced Drive)*

*: If equipped

If the rear camera sensor detects a pedestrian behind the vehicle while backing up and the system determines that the possibility of colliding with the detected pedestrian is high, a buzzer will sound. If the system determines that the possibility of colliding with the detected pedestrian is extremely high, the brakes will be applied automatically to help reduce the impact of the collision.

Examples of system operation

The system operates when an approaching pedestrian is detected behind the vehicle while backing up, and when the brake pedal is not depressed or is depressed late.

Screen display of pedestrians rear of the vehicle

Displays a message to urge the driver to take evasive action when a pedestrian is detected in the detection area behind the vehicle.

- A** Pedestrian detection icon
- B** "BRAKE!"

⚠ WARNING

■ If the Parking Support Brake function (pedestrians rear of the vehicle) operates unnecessarily

Depress the brake pedal immediately after the Parking Support Brake function (pedestrians rear of the vehicle) operates. (Operation of the function is canceled by depressing the brake pedal.)

■ Correct use of the Parking Support Brake function (pedestrians rear of the vehicle)

→P.376

■ The Parking Support Brake function (pedestrians rear of the vehicle) will operate when

The function will operate when the driving assist information indicator is not illuminated (→P.108, 110) and all of the following conditions are met:

- Fuel cell system output restriction control
- The Parking Support Brake is enabled.
- The vehicle speed is 9 mph (15 km/h) or less.
- The shift position is in R.
- When a pedestrian is to the rear of the vehicle
- The PKSB (Parking Support Brake) determines that a stronger than-normal-brake operation is necessary to avoid a collision.
- Brake control
- Fuel cell system output restriction control is operating.
- The Parking Support Brake determines that an emergency brake operation is necessary to avoid a collision with a pedestrian.

■ The Parking Support Brake function (pedestrians rear of the vehicle) will stop operating when

The function will stop operating if any of the following conditions are met:

- Fuel cell system output restriction control
- The Parking Support Brake is disabled.
- The collision becomes avoidable with normal brake operation.
- The pedestrian is no longer detected behind your vehicle.

- Brake control
- The Parking Support Brake is disabled.
- Approximately 2 seconds have elapsed since the vehicle was stopped by brake control.
- The brake pedal is depressed after the vehicle is stopped by brake control.

■ **Re-enabling the Parking Support Brake function (pedestrians rear of the vehicle)**

→P.388

■ **Detection area of the Parking Support Brake function (pedestrians rear of the vehicle)**

The detection area of the Parking Support Brake function (pedestrians rear of the vehicle) differs from the detection area of the RCD function (→P.377). Therefore, even if the RCD function detects a pedestrian and provides an alert, the Parking Support Brake function (pedestrians rear of the vehicle) may not start operating.

■ **Situations in which the system may not operate properly**

→P.378

■ **Situations in which the system may operate unexpectedly**

→P.379

Parking Support Brake function (pedestrians rear of the vehicle) (Vehicles with Toyota Teammate Advanced Drive)*

*: If equipped

If the rear camera sensor detects a pedestrian behind the vehicle while backing up and the system determines that the possibility of colliding with the detected pedestrian is high, a buzzer will sound. If the system determines that the possibility of colliding with the detected pedestrian is extremely high, the brakes will be applied automatically to help reduce the impact of the collision.

Examples of system operation

When a pedestrian is detected behind the vehicle while backing up, the brake pedal is not depressed or is depressed late.

Multimedia display

Displays a message to urge the driver to take evasive action when a pedestrian is detected in the detection area behind the vehicle. (A message will also be displayed on the multi-information display and head-up display [if equipped].)

- A** Pedestrian detection icon
- B** "BRAKE"

WARNING

■ **If the PKSB (Parking Support Brake) operates unnecessarily**

Depress the brake pedal immediately after the PKSB (Parking Support Brake) system operates. (Operation of the function is canceled by depressing the brake pedal.)

■ **Correct use of the PKSB (Parking Support Brake) system**

→P.380

NOTICE

■ **If "Parking Support Brake Unavailable Remove the Dirt of Rear Camera" is displayed on the multi-information display and the PKSB OFF indicator is illuminated**

If this message is displayed immediately after the power switch is changed to ON, operate the vehicle carefully, paying attention to your surroundings.

■ **The system will operate when**

The function will operate when the PKSB OFF indicator is not illuminated (→P.136, 138) and all of the following conditions are met:

- Fuel cell system output restriction control
- The Parking Support Brake is enabled.
- The vehicle speed is 9 mph (15 km/h) or less.
- The shift position is in R.
- The rear camera sensor detects a pedestrian behind the vehicle while backing up and the system determines that the possibility of colliding with the detected pedestrian is high.
- When a pedestrian is detected behind the vehicle.
- The PKSB (Parking Support Brake) determines that a stronger-than-normal brake operation is necessary to avoid a collision.
- Brake control
- Fuel cell system output restriction control is operating.
- The Parking Support Brake determines that an emergency brake operation is necessary to avoid a collision with a pedestrians.

■ **The system will stop operating when**

The function will stop operating if any of the following conditions are met:

- Fuel cell system output restriction control
- The Parking Support Brake is disabled.
- The collision becomes avoidable with normal brake operation.
- The pedestrian is no longer detected behind your vehicle.
- Brake control
- The Parking Support Brake is disabled.
- Approximately 2 seconds have elapsed since the vehicle was stopped by brake control.
- The brake pedal is depressed after the vehicle is stopped by brake control.
- The pedestrian is no longer detected behind your vehicle.

■ Re-enabling the pedestrians of the vehicle

→P.392

■ Detection range

The detection area of the pedestrians rear of the vehicle differs from the detection area of the RCD function (→P.381). Therefore, even if the RCD function detects a pedestrian and provides an alert, the pedestrians rear of the vehicle may not start operating.

■ Situations in which the system may not operate properly

→P.382

■ Situations in which the system may operate unexpectedly

→P.383

Toyota Teammate Advanced Park (Vehicles without Toyota Teammate Advanced Drive)*

*: If equipped

Function description

The Advanced Park is a system which assists in a safe and smooth parking or exiting from a parking space by displaying the blind spots around the vehicle and the target parking spot through a bird's eye view, delivering operation guidance through displays and buzzer operation, and changing the shift position, operating the steering wheel, accelerator pedal, and brake pedal.

Additionally, the panoramic view monitor* can display the area in front, behind, and from above the vehicle, helping confirm the condition of the area around the vehicle.

The turn signal lights will blink automatically when the parking assistance starts until the vehicle reaches the target parking spot, to notify people around the vehicle that parking is being performed.

Depending on the condition of the road surface or the vehicle, the distance between the vehi-

cle and a parking space, etc., it may not be possible to assist in parking in the target space.

Only use Advanced Park in accordance with all local road traffic laws and regulations.

*: For details on the panoramic view monitor refer to "MULTIMEDIA OWNER'S MANUAL".

Functions

■ Perpendicular parking (forward/reverse) function

Assistance is provided from the position the vehicle is stopped near the target parking space until the vehicle is in the parking space. (→P.417)

■ Perpendicular exiting (forward/reverse) function

Assistance is provided from the parked position until the vehicle is in a position where you can easily exit from the parking space. (→P.419)

■ Parallel parking function

Assistance is provided from the position the vehicle is stopped near the target parking space until the vehicle is in the parking space. (→P.421)

■ Parallel exiting function

Assistance is provided from the parked position until the vehicle is in a position where you can easily exit from the parking space. (→P.425)

■ Memory function

Assistance is provided until the vehicle is guided into a previously registered parking space. (→P.427)

WARNING

■ Cautions regarding the use of the system

The recognition and control capabilities for this system are limited. The driver should always drive safely by always being responsible without over relying on the system and have a understanding of the surrounding situations.

- As with a normal vehicle, take care to observe your surroundings while the vehicle is moving.
- Always pay attention to the vehicle's surroundings while the system is operating and depress the brake pedal as necessary to slow or stop the vehicle.
- When parking, make sure that the vehicle can be parked in the target parking space before beginning operation.
- Depending on the condition of the road surface or the vehicle, the distance between the vehicle and a parking space, etc., it may not be possible to detect a parking space or the system may not be able to provide assistance to the point the vehicle is fully parked.

 **WARNING**

- This system will guide the vehicle to appropriate positions for changing the direction of travel, however, if you feel that the vehicle is approaching too close to an adjacent parked vehicle at any time, depress the brake pedal and change the shift position. However, if this is performed, the number of times the vehicle changes direction may increase, and the vehicle may be parked at an angle.
- As certain objects or materials, such as the following, may not be detected, make sure to check the safety of the area around your vehicle and depress the brake pedal to stop the vehicle if it may collide with an object.
 - Thin objects (wires, fences, ropes, poles, etc.) or objects that appear like thin from a certain angle of approach (signs, bicycles, etc.)
 - Materials that absorb sound waves (cotton, snow, etc.)
 - Sharp-edged objects (block walls/columns, wall corners, etc.)
 - Objects in lower places (curb stones/blocks, stairs, parking blocks, etc.)
 - Tall objects with upper sections that protrude outward (beams, etc.)
 - Objects which are not perpendicular to the ground
 - Objects to which the vehicle is approaching diagonally

- Even if there is an object in the target parking space, it may not be detected and assistance may be performed.
- If it is likely that your vehicle will collide with a nearby vehicle, object, or person, or go over the top of a parking block, depress the brake pedal to stop the vehicle and press the Advanced Park main switch to disable the system.
- Never use only the multimedia display to view the area behind the vehicle. The image displayed may differ than the actual situation. Using only the screen when backing up may lead to an accident, such as a collision with another vehicle. When backing up, make sure to look directly or use the mirrors to check the safety of the area around your vehicle, especially behind the vehicle.
- When the ambient temperature is extremely low, the screen may appear dark or the displayed image may become unclear. Also, as moving objects may appear distorted or may not be able to be seen on the screen, make sure to directly check the safety of the area around your vehicle.
- In the following situations, while the vehicle is stopped and held by Advanced Park, it may be canceled and the vehicle may start moving. Immediately depress the brake pedal. Failure to do so may lead to an accident.
 - When the driver's door is opened
 - When operations instructed by the system are not performed within a certain amount of time

⚠ WARNING

- When the brake pedal is depressed and the vehicle is stopped for a certain amount of time
- When the system malfunctions
- As the steering wheel will turn while this system is operating, pay attention to the following.
- Be careful so that a necktie, scarf, or arm does not get caught. Keep your upper body away from the steering wheel. Also, keep children away from the steering wheel.
- Long fingernails may be caught and when the steering wheel is rotating, leading to injury.
- In an emergency, depress the brake pedal to stop the vehicle, and then press the Advanced Park main switch to disable the system.
- Do not allow anyone to put their hands outside of a window while this system is operating.

■ To ensure correct operation of the Advanced Park

Observe the following precautions. Failing to do so may result in the vehicle being unable to be driven safely and possibly cause an accident.

- Do not use this system in situations such as the following:
- When in areas other than common parking spaces
- When the surface of the parking space is sand or gravel and is not clearly defined with parking space lines

- When the parking space is not level, such as on a slope, or having differences in height, holes, or gutters
- Mechanical parking system
- Parking lot with a device which raises to contact the bottom of the vehicle
- When the road surface is frozen, slick, or covered with snow
- When it is extremely hot and the asphalt is melting
- When there are objects around the vehicle
- When there is an object between your vehicle and the target parking spot or within the target parking spot (within the displayed blue box)
- When in high pedestrian or vehicle traffic areas
- When the parking space is in a location that is difficult to park in (too narrow for your vehicle, etc.)
- When images are unclear due to dirt or snow attached to the camera lens, light being shined into the camera or shadows
- When tire chains or a compact spare tire is installed to the vehicle
- When the doors or trunk are not completely closed
- When an arm is held outside of a window
- In inclement weather such as heavy rain or snow

⚠ WARNING

- Make sure to use only standard sized tires, such as those that were installed to the vehicle when it was shipped from the factory. Otherwise, Advanced Park may not operate properly. Also, when the tires have been replaced, the displayed position of the lines or box displayed on the screen may become incorrect. When replacing the tires, contact your Toyota dealer.
- In situations such as the following, it may not be possible for the system to provide assistance to a registered parking spot or to operate correctly:
 - When the tires are extremely worn or the tire inflation pressure is low
 - When carrying a heavy load
 - When the vehicle is tilted due to the carried load
 - When a heater is installed in the surface of the parking space (road surface freeze prevention heater)
 - When the wheels are misaligned, such after a wheel has been subjected to a strong impact
 - When a pedestrian or passing vehicle is detected during assistance
 - When a device, such as a towing hook, bumper protector, bumper trim, bicycle carrier, snow plow, etc., is installed
 - When something is incorrectly detected as a parking line (light, reflections from a building, difference in height on the parking surface, a gutter, painted road lines, redrawn lines, etc.)

If the vehicle deviates greatly from the set parking space in any situation other than the above, have the vehicle inspected by your Toyota dealer.

⚠ NOTICE

■ Precautions for use Advanced Park

If the 12-volt battery was discharged or has been removed and installed, fold and extend the outside rear view mirrors.

Types of cameras and sensors used for the Advanced Park

Cameras and sensors are used to detect parked vehicles, making it easier to identify parking spaces.

► Front camera

▶ Side cameras

▶ Rear camera

▶ Sensors

→P.345

■ Camera images

As special cameras are used, the colors in displayed images may differ from the actual color.

■ Precautions for use

For details on the following, refer to the "MULTIMEDIA OWNER'S MANUAL".

- Displayable range of the screens
- Cameras
- Differences between displayed images and the actual road
- Differences between displayed images and the actual objects

■ Detection range of the cameras and sensors

- If a parked vehicle is behind the target parking space and the distance between it and the vehicle

becomes far, it may no longer be able to be detected. Depending on shape or condition of a parked vehicle, the detection range may become short or the vehicle may not be detected.

- Objects other than parked vehicles, such as columns, walls, etc., may not be detected. Also, if they are detected, they may cause the target parking space to be misaligned.

■ Situations in which parking space lines may not be recognized properly

- In situations such as the following, parking space lines on the road surface may not be detected:
 - When the parking space does not use lines (parking space boundaries are marked with rope, blocks, etc.)
 - When the parking space lines are faded or dirty, making them unclear
 - When the road surface is bright, such as concrete, and the contrast between it and the white parking space lines is small
 - When the parking space lines are any color other than yellow or white
 - When the area surrounding the parking space is dark, such as at night, in an underground parking lot, parking garage, etc.
 - When it is raining or has rained and the road surface is wet and reflective or there are puddles
 - When the sun is shining directly into a camera, such as in the early morning or evening
 - When the parking space is covered with snow or de-icing agent
 - When there are marks from repairs or other marks on the road surface, or there is a traffic bollard, or other object on the road surface
 - When the color or brightness of the road surface is uneven
 - When a camera has been splashed by hot or cold water and the lens has fogged up

414 5-5. Using the driving support systems

- When the appearance of the parking space is affected by the shadow of the vehicle or trees
- When a camera lens is dirty or covered with water droplets
- In situations such as the following, the target parking space may not be recognized correctly:
- When there marks from repairs or other marks on the road surface, or there is a parking block, traffic bollard, or other object on the road surface
- When it is raining or has rained and the road surface is wet and reflective or there are puddles
- When the area around the vehicle is dark or backlit
- When the color or brightness of the road surface is uneven
- When the parking space is on a slope
- When there are diagonal lines (access aisle) near the parking space
- When the appearance of the parking space is affected by the shadow of a parked vehicle (such as shadows from the grille, side step, etc.)
- When accessories which obstruct the view of the camera are installed
- When the parking space lines are faded or dirty, making them unclear
- When the appearance of the parking space is affected by the shadow of the vehicle or trees

■ Sensor detection information

→P.347

■ Objects which the sensor may not be properly detected

→P.347

■ Situations in which the sensor may not operate properly

→P.347

■ Situations in which parking assistance may not operate even if there is no possibility of a collision

→P.348

WARNING

■ Precautions for the cameras and sensors

- Due to the characteristics of the camera lens, the position of and distance to people and objects displayed on the screen may differ from the actual situation. For details, refer to "MULTIMEDIA OWNER'S MANUAL".
- Make sure to observe the precautions for using the intuitive parking assist (→P.346), otherwise a sensor may not operate correctly, possibly leading to an accident.
- In situations such as the following, the sensors may not operate correctly, possibly leading to an accident. Proceed carefully.
- When there is a parked vehicle next to the target parking space, if the displayed target parking space is far from the actual target parking space, a sensor may be misaligned. Have the vehicle inspected by your Toyota dealer.
- Do not install any accessories near the detection area of the sensors.

Turning the Advanced Park system on/off

Press the Advanced Park main switch.

If the switch is pressed while assistance is being performed, the assistance will be canceled.

Operating conditions of the Advanced Park

Assistance will begin when all of the following conditions are met:

- The brake pedal is depressed
- The vehicle is stopped
- The driver's seat belt is fastened
- The steering wheel is not being operated
- The accelerator pedal is not depressed
- All of the doors and the trunk are closed
- The outside rear view mirrors are not folded
- The parking brake is not engaged
- The dynamic radar cruise control are not operating
- ABS, VSC, TRAC, PCS and PKSB are not operating
- The vehicle is not on a steep slope
- The VSC and TRAC are not turned off

If assistance cannot be started, check the message displayed on the multimedia display (→P.434)

Advanced Park guidance screens

Guidance screens are displayed on the multimedia display.

► Guidance screen (When assistance starts)

A Target parking space box (blue)

B Advice display

C Parking type change button

If multiple buttons are displayed, depending on the condition of the button its function differs as follows.

P or **P** : Change the target to another parking space.

P or **P** : Select the current target parking space.

(P) : Select to change to the parallel parking function

(P) : Change the perpendicular parking (forward/reverse) function

D "MODE" button

Select to change between the memory function and the perpendicular parking (forward/reverse) function and parallel parking function. (→P.429)

E "Start" button

Select to start parking assistance.

F Perpendicular parking direction change button

Select to change between the parking (forward) function and parking (reverse) function

: Change the perpendicular parking (forward) function

: Change the perpendicular parking (reverse) function

G Customize setting button

Select to display the Advanced Park setting screen. (→P.433)

H Registration button

Select to begin registering a parking space.

► Guidance screen (When reversing)

A Operation icon

Displayed when the Advanced Park is operating.

B Guide lines (yellow and red)

Display points from the center of the edge of the front or rear bumper to the target stopping position (yellow)* and approximately 1 ft. (0.3 m) (red) from the vehicle.

C Moving object warning icon

D Emergency support brake control operation display

“BRAKE!” is displayed.

E Intuitive parking assist display

→P.345

*: The yellow lateral line is not displayed when the target stopping position is approximately 8.2 ft. (2.5 m) or more away from the vehicle.

■ Intuitive parking assist pop-up display

Regardless of whether the intuitive parking assist is off or on (→P.346), if an object is detected by the intuitive parking assist when the Advanced Park is operating, the intuitive parking assist pop up display will automatically be displayed over the guidance display.

■ Brake control operation when Advanced Park is operating

While the Advanced Park is operating, if the system determines that the possibility of collision with detected moving or stationary object is high, the fuel cell system output restriction control and brake control will operate.

If brake control operates, Advanced Park operation will be suspended and a message will be displayed on the multi-information display.

■ Buzzer

Depending on surrounding sounds or sounds from other systems, it may be difficult to hear the buzzer of this system.

■ If a black screen is displayed on the multimedia display when the Advanced Park is operating

The system is being affected by radio waves or may be malfunctioning. If a radio antenna is installed near a camera, move it to a location as far from the cameras as possible. If a radio antenna is not installed near a camera, and the screen does

not return to normal after turning the power switch off and then starting the fuel cell system again, have the vehicle inspected by your Toyota dealer.

Perpendicular parking (forward/reverse) function

The perpendicular parking (forward/reverse) function can be used if the target parking space can be detected when the vehicle is stopped close and perpendicular to the center of the parking space. Also, depending on the condition of the parking space, etc., if it is necessary to change the direction of travel of the vehicle, the shift position can be changed by assistance control.

Parking using the perpendicular parking (forward/reverse) function

- 1 Stop the vehicle at a position close and perpendicular to the center of the target parking space.
 - ▶ If there are parking space lines

- A Approximately 3.3 ft. (1 m)*
- B Approximately 8.2 ft. (2.5 m)*
- C Approximately 19.7 ft. (6 m) or more*
- D Approximately 18.0 ft. (5.5 m) or more*

The system can operate even if there is a parking space line on only one side of the target parking space.

*: This is a reference measurement for detection of a parking space. Depending on the surrounding environment, detection may not be possible.

- ▶ If there is an adjacent parked vehicle

- A Approximately 3.3 ft. (1 m)*
- B Approximately 9.8 ft. (3 m) or more*
- C Approximately 19.7 ft. (6 m) or more*
- D Approximately 18.0 ft. (5.5 m) or more*

The system can operate even if there is a vehicle on only one side of the target parking space.

*: This is a reference measurement for detection of a parking space. Depending on the surrounding environment, detection may not be possible.

- 2 Press the Advanced Park main switch and check that a possible parking space is displayed on the multimedia display.

- If a space which your vehicle can be parked is detected, a target parking space box will be displayed.
- If it is possible to parallel park in the space, select the parking space, and then select to change to the parallel parking function.
- If it is possible to change the direction which a parking space is entered, select the parking space, and then select or to change the direction.

- Depending on the surrounding environment, it may not be possible to use this function. According to the information displayed on the multimedia display, use the function on another parking space.

- 3 Select "Start" button.

A buzzer will sound, an operation message will be displayed on the multi-information display, and assistance will begin operating.

- When the brake pedal is released, "Moving Forward...", "Backing Up..." will be displayed and the vehicle will begin moving forward/reverse.
- To cancel assistance, press the Advanced Park main switch.

If assistance is canceled, "Advanced Park Cancel" will be displayed.

If you feel that the vehicle is approaching close to a surrounding vehicle, object, person, or gutter: →P.419

- 4 Perform operations as indicated by the advice displays

until the vehicle stops in the target parking space.

When the vehicle stops, “Advanced Park Finished” will be displayed and parking assistance will end.

If you select  on the multimedia display, the vehicle displayed on the parking assist completion screen will rotate.

■ If you feel that the vehicle is approaching close to a surrounding vehicle, object, person, or gutter

Depress the brake pedal to stop the vehicle and then change the shift position to change the direction of travel of the vehicle. At this time, assist will be suspended. However, if the “Start” button is selected, assist will resume and the vehicle will move in the direction corresponding to the selected shift position.

■ When the brakes have been operated

When the brakes have been operated, brake operation sound may be heard. This does not indicate a malfunction.

 NOTICE

■ When using the perpendicular parking (forward/reverse) function

● Make sure that there are no obstructions within the yellow guide lines and between the vehicle and target parking spot. If there are any obstructions between the vehicle and the target parking space, or between the yellow guide lines, cancel the function.

● As the target parking space will not be able to be set correctly if the surface of the parking space is on a slope or has differences in height, the vehicle may stray from the target parking space or be slanted. Therefore, do not use the function for this kind of parking spot.

● When parking in a narrow parking space, the vehicle may closely approach an adjacent parked vehicle. If a collision seems likely, depress the brake pedal to stop the vehicle.

● If a detected parked vehicle is narrow or parked extremely close to the curb, the position at which assistance will park the vehicle will also be close to the curb. If it seems likely the vehicle will collide with something or drive off of the road, depress the brake pedal to stop the vehicle, and then press the Advance Park main switch to disable the system.

Advanced Park perpendicular exiting (forward/reverse) function

When exiting from a perpendicular parking space, if the system

determines that exit is possible the perpendicular exiting (forward/reverse) function can be used. Also, depending on the surrounding environment, if it is necessary to change the direction of travel of the vehicle, the shift position can be changed by assistance control.

Leaving a parking space using the perpendicular exiting (forward/reverse) function

- 1 With the brake pedal depressed and P shift position selected, press the Advanced Park main switch and check that the exit direction selection screen is displayed on the multimedia display.

- 2 Select an arrow on the multimedia display to select the direction you wish to exit.

If the turn signal lever is operated, only exit to the left or right can be

selected.

- 3 Depress the brake pedal and select "Start" button.

A buzzer will sound, an operation message will be displayed on the multi-information display, and assistance will begin operating.

To cancel assistance, press the Advanced Park main switch. If assistance is canceled, "Advanced Park Cancel" will be displayed.

If you feel that the vehicle is approaching close to a surrounding vehicle, object, person, or gutter: →P.421

- 4 Perform operations as indicated by the advice displays until the vehicle is in a position where exit is possible.

When the vehicle reaches a position where exit is possible, "You can exit by moving the steering wheel" will be displayed. If the steering wheel is operated, "Advanced Park Finished" will be displayed and assistance will end. As assistance will end while the vehicle is moving, grip the steering wheel and drive forward.

If the steering wheel is not operated, the vehicle will stop at the exit position. Assistance can be ended by depressing the accelerator pedal

or brake pedal.

- If you feel that the vehicle is approaching close to a surrounding vehicle, object, person, or gutter

→P.419

- Perpendicular exiting (forward/reverse) function

Do not use exiting (forward/reverse) function in any situation other than when exiting a parallel parking spot. If assistance is started unintentionally, depress the brake pedal and stop the vehicle, then press the Advanced Park main switch to cancel assistance.

- Situations in which the perpendicular exiting (forward/reverse) function will not operate

In situations such as the following, the perpendicular exiting (forward/reverse) function will not operate:

- When a vehicle which is waiting to park is in the exit direction

- When a wall, column, or person is detected as near a front or rear center or corner sensor

- When the brakes have been operated

→P.419

Advanced Park Parallel parking function

The parallel parking function can be used if the target parking space can be detected when the vehicle is stopped close and aligned with the center of the parking space. Also, depending on the condition of the parking space, etc., if it is necessary to change the direction of travel of the vehicle, the shift position can be changed by assistance control.

Parking using the parallel parking function

- 1 Stop the vehicle with it aligned near the center of the target parking space.

- ▶ If there are parking space lines

- A** Approximately 3.3 ft. (1 m)*
- B** Approximately 19.7 ft. (6 m)*
- C** Approximately 14.8 ft. (4.5 m) or more*
- D** Approximately 26.2 ft. (8 m) or more*

*: This is a reference measurement for detection of a parking space. Depending on the surrounding environment, detection may not be possible.

- ▶ If there is an adjacent parked vehicle

- A** Approximately 3.3 ft. (1 m)*
- B** Approximately 23.0 ft. (7 m) or more*
- C** Approximately 14.8 ft. (4.5 m) or more*
- D** Approximately 26.2 ft. (8 m) or more*

*: This is a reference measurement for detection of a parking space. Depending on the surrounding environment, detection may not be possible.

- 2 Press the Advanced Park main switch and check that a possible parking space is dis-

played on the multimedia display.

- If a space which your vehicle can be parked is detected, a target parking space box will be displayed.
- If it is possible to perpendicular parking (forward/reverse) in the space, select the parking space, and then select  to change to the perpendicular parking (forward/reverse) function.
- Depending on the surrounding environment, it may not be possible to use this function. According to the information displayed on the multimedia display, use the function on another parking space.

3 Select "Start" button.

A buzzer will sound, an operation message will be displayed on the multi-information display, and assis-

tance will begin operating.

- When the brake pedal is released, "Moving Forward..." will be displayed and the vehicle will begin moving forward.
- To cancel assistance, press the Advanced Park main switch.

If assistance is canceled, "Advanced Park Cancel" will be displayed.

If you feel that the vehicle is approaching close to a surrounding vehicle, object, person, or gutter: →P.424

- 4 Perform operations as indicated by the advice displays until the vehicle stops in the target parking space.

When the vehicle stops, "Advanced Park Finished" will be displayed and parking assistance will end.

If you select  on the multimedia display, the vehicle displayed on the parking assist completion

screen will rotate.

■ **If you feel that the vehicle is approaching close to a surrounding vehicle, object, person, or gutter**

→P.419

■ **If “No available parking space” is displayed**

Even if the vehicle is stopped parallel to a parking space, an adjacent parked vehicle may not be detected. In this case, if the vehicle is moved to a position that a parked vehicle can be detected, assistance can be started.

■ **When the brakes have been operated**

→P.419

 NOTICE

■ **When using the parallel parking function**

● Make sure that there are no obstructions within the yellow guide lines and between the vehicle and target parking spot. If any obstructions are detected within the yellow guide lines or between the vehicle and the target parking space, the parallel parking function will be cancelled or suspended.

● As the target parking space will not be able to be set correctly if the surface of the parking space is on a slope or has differences in height, the vehicle may stray from the target parking space or be slanted. Therefore, do not use the parallel parking function for this kind of parking spot.

 **NOTICE**

- If an adjacent parked vehicle is narrow or parked extremely close to the curb, the position at which assistance will park the vehicle will also be close to the curb. If it seems likely the vehicle will collide with the curb or drive off of the road, depress the brake pedal to stop the vehicle, and then press the Advanced Park main switch to disable the system.

- If there is a wall or other barrier on the inner side of the parking space, the vehicle may stop at a position slightly outside of the set target parking space.

Advanced Park Parallel exiting function

When exiting from a parallel parking space, if the system determines that exit is possible the parallel exiting function can be used. Also, depending on the surrounding environment, if it is necessary to change the direction of travel of the vehicle, the shift position can be changed by

assistance control.

Leaving a parking space using the parallel exiting function

- 1 With the brake pedal depressed and P shift position selected, press the Advanced Park main switch and check that the exit direction selection screen is displayed on the multimedia display.

- 2 Select an arrow on the multimedia display to select the direction you wish to exit.

If the turn signal lever is operated, only exit to the left or right can be selected.

- 3 Depress the brake pedal and select "Start" button.

A buzzer will sound, an operation message will be displayed on the multi-information display, and assistance will begin operating.

To cancel assistance, press the Advanced Park main switch.

If assistance is canceled, "Advanced Park Cancel" will be displayed.

If you feel that the vehicle is approaching close to a surrounding vehicle, object, person, or gutter: →P.426

- 4 Perform operations as indicated by the advice displays until the vehicle is in a position where exit is possible.

When the vehicle reaches a position where exit is possible, "You can exit by moving the steering wheel" will be displayed. If the steering wheel is operated, "Advanced Park Finished" will be displayed and assistance will end. As assistance will end while the vehicle is moving, grip the steering wheel and drive forward.

If the steering wheel is not operated, the vehicle will stop at the exit position.

Assistance can be ended by depressing the accelerator pedal or brake pedal.

■ **If you feel that the vehicle is approaching close to a surrounding vehicle, object, person, or gutter**

→P.419

■ **Parallel exiting function**

Do not use parallel exiting function in any situation other than when exiting a parallel parking spot. If assistance is started unintentionally, depress the brake pedal and stop the vehicle, then press the Advanced Park main switch to cancel assistance.

■ **Situations in which the parallel exiting function will not operate**

In situations such as the following, the parallel exiting function will not operate:

- When vehicles waiting at a traffic signal in the exit direction

- When a vehicle is stopped in the area behind where the vehicle will exit

- When a wall, column, or person is detected as near a front or rear side sensor

- When the vehicle has been parked on a curb and a side sensor detects the road surface

- When a vehicle is not parked in front of the vehicle
- When there is excessive space between the front of the vehicle and a parked vehicle

■ **When the brakes have been operated**

→P.419

Advanced Park Memory function

The memory function can be used to park in a previously registered parking space, even if there are no parking space lines or adjacent parked vehicles.

Up to 3 parking spaces can be registered.

Registering a parking space

- 1 Stop the vehicle with it aligned near the center of the target parking space.

A Approximately 3.3 ft. (1 m)

- 2 Press the main switch and then select

If the Advanced Park main switch is pressed at a parking space without parking lines or any adjacent parked vehicles, "No available parking space" may be displayed.

Continuously select and hold .

- 3 Select perpendicular parking (forward/reverse) function or parallel parking function.

Only parking spaces for which assist can be performed are displayed.

- 4 Select the parking direction.

When perpendicular parking (forward/reverse) was selected in step 3:

When parallel parking was selected in step 3:

- 5 Using the arrow buttons, adjust the position of the parking space to be registered,

and then select "OK" button.

- 6 Select "Start" button.

A buzzer will sound, an operation message will be displayed on the multi-information display, and assistance will begin operating.

When the brake pedal is released, "Moving Forward..." will be displayed and the vehicle will begin moving forward.

If you feel that the vehicle is approaching close to a surrounding vehicle, object, person, or gutter: →P.430

- 7 Perform operations as indicated by the advice displays

until the vehicle stops in the target parking space.

- 8 Check the position that the vehicle has stopped. If necessary, adjust the position of the parking spot to be registered using the arrow buttons, and then select "Reg." button.

"Registration Completed" will be displayed on the multimedia display.

- Register the parking space only if there are no obstructions within the area shown by the thick lines.
- The amount that the position of the parking spot to be registered can be adjusted is limited.

When parking in a parking space registered to the memory function

- 1 Stop the vehicle with it aligned near the center of the target parking space.

A Approximately 3.3 ft. (1 m)

- 2 Press the Advanced Park main switch and check that a possible parking space is displayed on the multimedia display.

If the "MODE" button is displayed, the button can be touched to change between the memory function, perpendicular parking (forward/reverse) function and parallel parking function.

- 3** Select the desired parking space, and then select “Start” button.

Perform the procedure for the perpendicular parking (forward/reverse) function from step **3**. (→P.417)

■ If you feel that the vehicle is approaching close to a surrounding vehicle, object, person, or gutter

→P.419

■ When overwriting a registered parking space

If the maximum number of parking spaces have been registered and  is selected, a registered parking space can be selected and then overwritten with a new parking space.

■ When multiple parking spaces are registered

Select the desired parking space, and then select “Start” button.

■ When the brakes have been operated

→P.419

 NOTICE

■ When using the memory function (→P.419, 424)

- The memory function is a function which provides assistance in parking in a previously registered parking space. If the condition of the road surface, vehicle, or surrounding area differs from when registration was performed, the parking space may not be able to be detected correctly or assistance may not be provided to the point that the vehicle is fully parked.
- Do not register a parking space in situations such as the following, as the set parking space may not be able to be registered or assistance may not be possible later.
 - When a camera lens is dirty or covered with water droplets
 - When it is raining or snowing
 - When the surrounding area is dark (at night, etc.)
- In situations such as the following, it may not be possible to register a parking space.
 - When there is insufficient space between the road and parking space
 - When the road surface around the parking space does not have any differences the system can recognize
- If a parking space has been registered in situations such as the following, assistance may not be able to be started later or assistance to the registered position may not be possible.

 NOTICE

- When shadows are cast on the parking space (there is a carport over the parking space, etc.)

- When there are leaves, garbage, or other objects which will likely move, in the parking space
- When the road surface around the parking space has the same repeating pattern (brick, etc.)

- In situations such as the following, it may not be possible for the system to provide assistance to a registered parking spot:
 - When the appearance of the parking space is affected by the shadow of the vehicle or trees
 - When an object is detected in the registered parking space
 - When a pedestrian or passing vehicle is detected during assistance

- When the position the vehicle is stopped when assistance is started differs from the position when registration was performed
- When the registered parking space cannot be reached due to the existence of parking blocks, etc.
- When the road surface around the parking space has changed (road surface has degraded or been resurfaced)
- When the sunlight conditions differ from when registration was performed (due to weather or time of day)
- When the sun is shining directly into a camera, such as in the early morning or evening
- When the color or brightness of the road surface is uneven
- When a light is temporarily shined on the parking space (lights of another vehicle, security light, etc.)
- When the road surface around the parking space has the same repeating pattern
- When there is a low protrusion on the road surface near the parking space
- When the parking space is on a slope
- When a camera has been splashed by hot or cold water and the lens has fogged up
- When a camera lens is dirty or covered with water droplets
- When accessories which obstruct the view of the camera are installed

 **NOTICE**

If assistance is ended during registration, perform registration again.

- When registering a parking space to the memory function, if the road surface cannot be detected “No available parking space to register” will be displayed.
- When using the memory function, make sure to stop immediately in front of the stop position. Otherwise the parking space may not be able to be detected correctly or assistance may not be provided to the point that the vehicle is fully parked.
- Do not use the memory function if a camera has been subjected to a strong impact or images of the panoramic view monitor are misaligned.
- If a camera has been replaced, as the installation angle of the camera will have changed, it will be necessary to reregister parking spaces of the memory function.

Advanced Park cancellation/suspension

■ **Assistance will be canceled when**

In situations such as the following, Advanced Park operation will be canceled. Firmly hold the steering wheel and depress the brake pedal to stop the vehicle.

As system operation has been canceled, begin the operation again or continue parking manually, using

- the steering wheel.
- The Advanced Park main switch is pushed
 - The shift position has been changed to P
 - The parking brake is engaged
 - A door or the trunk is opened
 - The driver’s seat belt is unfastened
 - The outside rear view mirrors are folded
 - The TRAC or VSC is turned off
 - The TRAC, VSC or ABS operates
 - The power switch is pressed
 - The system determines assistance cannot be continued in the current parking environment
 - The system malfunctions
 - While the vehicle was stopped, “Cancel” was selected on the multimedia display

■ **Assistance will be suspended when**

In situations such as the following, Advanced Park operation will be suspended.

Assistance can be started again by following the directions displayed on the multimedia display.

Also, when assistance is suspended, if the shift position is changed twice with the brake pedal

depressed, assistance will be canceled in that shift position. However, if assistance is suspended by changing the shift position, assistance will be canceled if the shift position is changed once.

- The steering wheel is operated
- The accelerator pedal is depressed
- The shift position has been changed
- A moving object or stationary object that may collide with your vehicle has been detected, resulting in the operation of the fuel cell system output control/braking control
- Camera switch is pressed

Changing the Advanced Park settings

Select  on the multimedia display, and then select “Advanced Park”.

■ Speed profile

The vehicle speed for when assistance is performed can be set.

This setting cannot be changed when registering a parking space to the memory function.

■ Obstacle detection range

The distance from which obstacles will be avoided while assis-

tance is being performed can be set.

■ Preferred parking method

The preferred parking direction displayed when at a parking space which perpendicular (forward/reverse) or parallel parking is possible can be set.

■ Preferred parking direction

The preferred parking direction displayed when it is possible to pull perpendicular forward or reverse into a parking space can be selected.

■ Preferred exit direction (perpendicular)

The preferred exit direction displayed when it is possible to pull forward or reverse to the left or right out of a parking space can be selected.

■ Preferred exit direction (parallel)

The preferred exit direction displayed when it is possible to exit to the left or right from a parallel parking space can be selected.

■ Camera view when parking

The display angle of the camera image when using the perpendicular parking (forward/reverse) function or parallel parking function can be set.

■ Camera view when exiting

The display angle of the camera

image when using the perpendicular exiting (forward/reverse) function or parallel parking exit function can be set.

■ **Parking path adjustment**

The course for when parking assistance is operating can be adjusted inward or outward.

If the tires are worn, the path of vehicle may be offset from the center of the parking space. In this case, use this setting to adjust the parking course.

■ **Road width adjustment**

When parking assistance is started, the amount of lateral movement while the vehicle is moving forward can be adjusted.

■ **Park position adjustment (forward)**

The position at which perpendicular parking (forward) is completed can be adjusted. (Except when using the memory function.)

■ **Park position adjustment (reverse)**

The position at which perpendicular parking (reverse) is completed can be adjusted. (Except when using the memory function.)

■ **Rear accessory setting**

If an accessory, such as a trailer hitch, has been installed to the rear of the vehicle, the length of

the rear of the vehicle can be adjusted to help avoid colliding with objects to the rear of the vehicle.

■ **Clear registered parking space**

The parking spaces registered to the memory function can be deleted. Parking space information cannot be deleted when assistance is being performed or when registering parking space information to the memory function.

 NOTICE

- Take care when using the park position adjustment (forward) or park position adjustment (reverse) for adjusting because the vehicle may collide with parking blocks, curb stones, or other low objects.
- If it is likely that your vehicle will collide with a nearby vehicle/object, parking block, curb stone, etc., depress the brake pedal to stop the vehicle and press the Advanced Park main switch to disable the system.

Advanced Park Displayed messages

The operating state, assistance operation, etc. of the Advanced Park is displayed on the multimedia display. If a message is displayed, respond according to the content displayed.

■ If “No available parking space” is displayed

Move the vehicle to a location where a parking space or parking lines can be detected.

■ If “Unavailable in current condition” is displayed

Move the vehicle to another location and use the system.

■ If “Not enough space to exit” is displayed

The parallel parking exit function cannot be used due to a situation such as the distance between your vehicle and vehicles parked in front of and behind your vehicle being short, the existence of an object in the exit direction, etc.

Check the conditions of the area around your vehicle and exit from the parking space manually.

■ If “Cannot control speed” is displayed

The system judged that it cannot adjust the speed of the vehicle when using the system in an area with a slope or step and assistance was canceled.

Use the system in a level location.

■ If “Obstacle detected” is displayed

As a moving object or stationary object that may collide with your vehicle has been detected, the fuel cell system output control/braking control operates to suspend Advanced Park assistance.

Check the condition of the surrounding area. To resume assistance, select the “Start” button on the multimedia display.

■ If “No available parking space to register” is displayed

This message is displayed when  is selected at a parking space that cannot be detected.

Operate the system at a parking space where differences in the road surface can be recognized.
(→P.427)

Toyota Teammate Advanced Park (Vehicles with Toyota Teammate Advanced Drive)*

*: If equipped

Function description

The Advanced Park is a system which assists in a safe and smooth parking or exiting from a parking space by displaying the blind spots around the vehicle and the target parking spot through a bird's eye view, delivering operation guidance through displays and buzzer operation, and changing the shift position, operating the steering wheel, accelerator pedal, and brake pedal.

Additionally, the panoramic view monitor* can display the area in front, behind, and from above the vehicle, helping confirm the condition of the area around the vehicle.

Depending on the condition of the road surface or the vehicle, the distance between the vehicle and a parking space, etc., it may not be possible to assist in parking in the target space.

*: For details on the panoramic view monitor refer to "MULTIMEDIA OWNER'S MANUAL".

Functions

■ Perpendicular parking (forward/reverse) function

Assistance is provided from the position the vehicle is stopped near the target parking space until the vehicle is in the parking space. (→P.444)

■ Perpendicular exiting (forward/reverse) function

Assistance is provided from the parked position until the vehicle is in a position where you can easily exit from the parking space. (→P.447)

■ Parallel parking function

Assistance is provided from the position the vehicle is stopped near the target parking space until the vehicle is in the parking space. (→P.449)

■ Parallel exiting function

Assistance is provided from the parked position until the vehicle is in a position where you can easily exit from the parking space. (→P.452)

■ Memory function

Assistance is provided until the vehicle is guided into a previously registered parking space. (→P.454)

**WARNING****■ Cautions regarding the use of the system**

The recognition and control capabilities for this system are limited. The driver should always drive safely by always being responsible without over relying on the system and have a understanding of the surrounding situations.

- As with a normal vehicle, take care to observe your surroundings while the vehicle is moving.
- Always pay attention to the vehicle's surroundings while the system is operating and depress the brake pedal as necessary to slow or stop the vehicle.
- When parking, make sure that the vehicle can be parked in the target parking space before beginning operation.
- Depending on the condition of the road surface or the vehicle, the distance between the vehicle and a parking space, etc., it may not be possible to detect a parking space or the system may not be able to provide assistance to the point the vehicle is fully parked.
- This system will guide the vehicle to appropriate positions for changing the direction of travel, however, if you feel that the vehicle is approaching too close to an adjacent parked vehicle at any time, depress the brake pedal and change the shift position. However, if this is performed, the number of times the vehicle changes direction may increase, and the vehicle may be parked at an angle.

- As following objects may not be detected, make sure to check the safety of the area around your vehicle and depress the brake pedal to stop the vehicle if it may collide with an object.
 - Wires, fences, ropes, etc.
 - Cotton, snow and other materials that absorb sound waves
 - Sharply-angled objects
 - Low objects (curb stones, parking blocks, etc.)
 - Tall objects with upper sections projecting outwards in the direction of your vehicle
- Even if there is an object in the target parking space, it may not be detected and assistance may be performed.
- While the system is operating, if it is likely that your vehicle will collide with a nearby vehicle, parking block, object, or person, depress the brake pedal to stop the vehicle and press the Advanced Park main switch to disable the system.
- Never use only the multimedia display to view the area behind the vehicle. The image displayed may differ than the actual situation. Using only the screen when backing up may lead to an accident, such as a collision with another vehicle. When backing up, make sure to look directly or use the mirrors to check the safety of the area around your vehicle, especially behind the vehicle.

 **WARNING**

- When the ambient temperature is extremely low, the screen may appear dark or the displayed image may become unclear. Also, as moving objects may appear distorted or may not be able to be seen on the screen, make sure to directly check the safety of the area around your vehicle.
- In the following situations, while the vehicle is stopped and held by Advanced Park, it may be canceled and the vehicle may start moving. Immediately depress the brake pedal. Failure to do so may lead to an accident.
 - When the driver's door is opened
 - When operations instructed by the system are not performed within a certain amount of time
 - When the brake pedal is depressed and the vehicle is stopped for a certain amount of time
 - When the system malfunctions
- As the steering wheel will turn while this system is operating, pay attention to the following.
 - Be careful so that a necktie, scarf, or arm does not get caught. Keep your upper body away from the steering wheel. Also, keep children away from the steering wheel.
 - Long fingernails may be caught and when the steering wheel is rotating, leading to injury.

- In an emergency, depress the brake pedal to stop the vehicle, and then press the Advanced Park main switch to disable the system.

- Do not allow anyone to put their hands outside of a window while this system is operating.

■ **To ensure correct operation of the Advanced Park**

Observe the following precautions. Failing to do so may result in the vehicle being unable to be driven safely and possibly cause an accident.

- Do not use this system in situations such as the following:
 - When in areas other than common parking spaces
 - When the surface of the parking space is sand or gravel and is not clearly defined with parking space lines
 - When the parking space is not level, such as when on a slope or has differences in height
 - Mechanical parking system
 - Parking lot with a device which raises to contact the bottom of the vehicle
 - When the road surface is frozen, slick, or covered with snow
 - When it is extremely hot and the asphalt is melting
 - When there are objects around the vehicle
 - When there is an object between your vehicle and the target parking spot or within the target parking spot (within the displayed blue box)

 **WARNING**

- When there is a gutter between your vehicle and the target parking space or within the target parking spot (within the displayed blue box)
- When there is a hole or gutter in the exit direction
- When in high pedestrian or vehicle traffic areas
- When the parking space is in a location that is difficult to park in (too narrow for your vehicle, etc.)
- When images are unclear due to dirt or snow attached to the camera lens, light being shined into the camera or shadows
- When tire chains or a compact spare tire is installed to the vehicle
- When the doors or trunk are not completely closed
- When an arm is held outside of a window
- In inclement weather such as heavy rain or snow
- Make sure to use only standard sized tires, such as those that were installed to the vehicle when it was shipped from the factory. Otherwise, Advanced Park may not operate properly. Also, when the tires have been replaced, the displayed position of the lines or box displayed on the screen may become incorrect. When replacing the tires, contact your Toyota dealer.
- In situations such as the following, it may not be possible for the system to provide assistance to a registered parking spot:

- When the tires are extremely worn or the tire inflation pressure is low
- When carrying a heavy load
- When the vehicle is tilted due to the carried load
- When a heater is installed in the surface of the parking space (road surface freeze prevention heater)
- When the wheels are misaligned, such as after a wheel has been subjected to a strong impact
- When a pedestrian or passing vehicle is detected during assistance
- When something is incorrectly detected as a parking line (light, reflections from a building, difference in height on the parking surface, a gutter, painted road lines, redrawn lines, etc.)

If the vehicle deviates greatly from the set parking space in any situation other than the above, have the vehicle inspected by your Toyota dealer.

 **NOTICE**

■ Precautions for use Advanced Park

If the 12-volt battery was discharged or has been removed and installed, fold and extend the outside rear view mirrors.

Type of cameras and sensors used for the Advanced Park

Cameras and sensors are used to detect parked vehicles, mak-

ing it easier to identify parking spaces.

▶ Front camera

▶ Side cameras

▶ Rear camera

▶ Sensors

→P.354

■ Camera images

As special cameras are used, the colors in displayed images may differ from the actual color.

■ Precautions for use

For details on the following, refer to “Panoramic view monitor” of “Panoramic view monitor functions” in the “MULTIMEDIA OWNER’S MANUAL”.

- Displayable range of the screens
- Cameras
- Differences between displayed images and the actual road
- Differences between displayed images and the actual objects

■ Detection range of the cameras and sensors

- If a parked vehicle is behind the target parking space and the distance between it and the vehicle becomes far, it may no longer be able to be detected. Depending on shape or condition of a parked vehicle, the detection range may become short or the vehicle may not be detected.
- Objects other than parked vehicles, such as columns, walls, etc., may not be detected. Also, if they are detected, they may cause the target parking space to be misaligned.

■ Situations in which parking space lines may not be recognized properly

- In situations such as the following, parking space lines on the road surface may not be detected:
 - When the parking space does not use lines (parking space boundaries are marked with rope, blocks, etc.)
 - When the parking space lines are faded or dirty, making them unclear
 - When the road surface is bright, such as concrete, and the contrast between it and the white parking space lines is small
 - When the parking space lines are any color other than yellow or white
 - When the area surrounding the

- parking space is dark, such as at night, in an underground parking lot, parking garage, etc.
- When it is raining or has rained and the road surface is wet and reflective or there are puddles
 - When the sun is shining directly into a camera, such as in the early morning or evening
 - When the parking space is covered with snow or de-icing agent
 - When there marks from repairs or other marks on the road surface, or there is a traffic bollard, or other object on the road surface
 - When the color or brightness of the road surface is uneven
 - When a camera has been splashed by hot or cold water and the lens has fogged up
 - When the appearance of the parking space is affected by the shadow of the vehicle or trees
 - When a camera lens is dirty or covered with water droplets
- In situations such as the following, the target parking space may not be recognized correctly:
 - When there marks from repairs or other marks on the road surface, or there is a parking block, traffic bollard, or other object on the road surface
 - When it is raining or has rained and the road surface is wet and reflective or there are puddles
 - When the area around the vehicle is dark or backlit
 - When the color or brightness of the road surface is uneven
 - When the parking space is on a slope
 - When there are diagonal lines (access aisle) near the parking space
 - When the appearance of the parking space is affected by the shadow of a parked vehicle (such as shadows from the grille, side step, etc.)
 - When accessories which obstruct the view of the camera are installed
 - When the parking space lines are faded or dirty, making them unclear
- When the appearance of the parking space is affected by the shadow of the vehicle or trees
- **Sensor detection information**
→P.357
 - **Objects which the sensor may not be properly detected**
→P.357
 - **Situations in which the sensor may not operate properly**
→P.357
 - **Situations in which parking assistance may operate even if there is no possibility of a collision**
→P.358

 **WARNING**
Precautions for the cameras and sensors

- Due to the characteristics of the camera lens, the position of and distance to people and objects displayed on the screen may differ from the actual situation. For details, refer to "MULTIMEDIA OWNER'S MANUAL".
- Make sure to observe the precautions for using the intuitive parking assist (→P.355), otherwise a sensor may not operate correctly, possibly leading to an accident.
- In situations such as the following, the sensors may not operate correctly, possibly leading to an accident. Proceed carefully.

⚠ WARNING

- When there is a parked vehicle next to the target parking space, if the displayed target parking space is far from the actual target parking space, a sensor may be misaligned. Have the vehicle inspected by your Toyota dealer.
- Do not install any accessories near the detection area of the sensors.

Turning the Advanced Park system on/off

Press the Advanced Park main switch.

If the switch is pressed while assistance is being performed, the assistance will be canceled.

■ Operating conditions of the Advanced Park

Assistance will begin when all of the following conditions are met:

- The brake pedal is depressed
- The vehicle is stopped
- The driver's seat belt is fastened
- The steering wheel is not being operated
- The accelerator pedal is not depressed
- All of the doors and the trunk are

closed

- The outside rear view mirrors are not folded
- The parking brake is not engaged
- The dynamic radar cruise control are not operating
- ABS, VSC, TRAC, PCS and PKSB are not operating
- The vehicle is not on a steep slope
- The VSC and TRAC are not turned off

If assistance cannot be started, check the message displayed on the multimedia display (→P.461)

Advanced Park guidance screens

Guidance screens are displayed on the multimedia display.

- ▶ Guidance screen (When assistance starts)

A Target parking space box (blue)

B Advice display

C Parking type change button

If multiple buttons are displayed, depending on the condition of the button its function differs as follows.

or : Change the target to another parking space.

or : Select the current target parking space.

: Select to change to the parallel parking function

: Change the perpendicular parking (forward/reverse) function

D “MODE” button
Select to change between the memory function and the perpendicular parking (forward/reverse) function and parallel parking function. (→P.456)

E “Start” button
Select to start parking assistance.

F Perpendicular parking direction change button
Select to change between the parking (forward) function and parking (reverse) function

: Change the perpendicular parking (forward) function

: Change the perpendicular parking (reverse) function

G Customize setting button
Select to display the Advanced Park setting screen. (→P.460)

H Registration button
Select to begin registering a park-

ing space.

▶ Guidance screen (When reversing)

A Operation icon
Displayed when the Advanced Park is operating.

B Guide lines (yellow and red)
Display points from the center of the edge of the front or rear bumper to the target stopping position (yellow)* and approximately 1 ft. (0.3 m) (red) from the vehicle.

C Moving object warning icon

D Emergency support brake control operation display
“BRAKE!” is displayed.

E Intuitive parking assist display
→P.355

*: The yellow lateral line is not displayed when the target stopping position is approximately 8.2 ft. (2.5 m) or more away from the vehicle.

Intuitive parking assist pop-up display

Regardless of whether the intuitive parking assist is off or on (→P.355), if an object is detected by the intui-

tive parking assist when the Advanced Park is operating, the intuitive parking assist pop up display will automatically be displayed over the guidance display.

■ Brake control operation when Advanced Park is operating

While the Advanced Park is operating, if the system determines that the possibility of collision with detected moving or stationary object is high, the fuel cell system output restriction control and brake control will operate.

If brake control operates, Advanced Park operation will be suspended and a message will be displayed on the multi-information display.

■ Buzzer

Depending on surrounding sounds or sounds from other systems, it may be difficult to hear the buzzer of this system.

■ If a black screen is displayed on the multimedia display when the Advanced Park is operating

The system is being affected by radio waves or may be malfunctioning. If a radio antenna is installed near a camera, move it to a location as far from the cameras as possible. If a radio antenna is not installed near a camera, and the screen does not return to normal after turning the power switch off and then starting the fuel cell system again, have the vehicle inspected by your Toyota dealer.

Perpendicular parking (forward/reverse) function

The perpendicular parking (forward/reverse) function can be used if the target parking space can be detected when the vehicle is stopped close and perpendicular to the center of the

parking space. Also, depending on the condition of the parking space, etc., if it is necessary to change the direction of travel of the vehicle, the shift position can be changed by assistance control.

■ Parking using the perpendicular parking (forward/reverse) function

- 1 Stop the vehicle at a position close and perpendicular to the center of the target parking space.
- ▶ If there are parking space lines

- A** Approximately 3.3 ft. (1 m)*
- B** Approximately 8.2 ft. (2.5 m)*
- C** Approximately 19.7 ft. (6 m) or more*
- D** Approximately 18.0 ft. (5.5 m) or more*

The system can operate even if there is a parking space line on only one side of the target parking space.

*: This is a reference measurement for detection of a parking space.

Depending on the surrounding environment, detection may not be possible.

- ▶ If there is an adjacent parked vehicle

- A** Approximately 3.3 ft. (1 m)*
- B** Approximately 9.8 ft. (3 m) or more*
- C** Approximately 19.7 ft. (6 m) or more*
- D** Approximately 18.0 ft. (5.5 m) or more*

The system can operate even if there is a vehicle on only one side of the target parking space.

*: This is a reference measurement for detection of a parking space. Depending on the surrounding environment, detection may not be possible.

- 2 Press the Advanced Park main switch and check that a possible parking space is dis-

played on the multimedia display.

- If a space which your vehicle can be parked is detected, a target parking space box will be displayed.
- If it is possible to parallel park in the space, select the parking space, and then select **(P)** to change to the parallel parking function.
- If it is possible to change the direction which a parking space is entered, select the parking space, and then select or change the direction.
- Depending on the surrounding environment, it may not be possible to use this function. According to the information displayed on the multimedia display, use the function on another parking space.

3 Select “Start” button.

A buzzer will sound, an operation message will be displayed on the multi-information display, and assistance will begin operating.

- When the brake pedal is released, “Moving Forward...”, “Backing Up...” will be displayed and the vehicle will begin moving forward/reverse.
- To cancel assistance, press the Advanced Park main switch.

If assistance is canceled, “Advanced Park Cancel” will be displayed.

If you feel that the vehicle is approaching close to a surrounding vehicle, object, person, or gutter: →P.446

4 Perform operations as indicated by the advice displays until the vehicle stops in the target parking space.

When the vehicle stops, “Advanced Park Finished” will be displayed and parking assistance will end.

If you select  on the multimedia display, the vehicle displayed on the parking assist completion

screen will rotate.

■ **If you feel that the vehicle is approaching close to a surrounding vehicle, object, person, or gutter**

Depress the brake pedal to stop the vehicle and then change the shift position to change the direction of travel of the vehicle. At this time, assist will be suspended. However, if the “Start” button is selected, assist will resume and the vehicle will move in the direction corresponding to the selected shift position.

■ **When the brakes have been operated**

When the brakes have been operated, brake operation sound may be heard. This does not indicate a malfunction.

 NOTICE

■ **When using the perpendicular parking (forward/reverse) function**

- Make sure that there are no obstructions within the yellow guide lines and between the vehicle and target parking spot. If there are any obstructions between the vehicle and the target parking space, or between the yellow guide lines, cancel the function.

 NOTICE

- As the target parking space will not be able to be set correctly if the surface of the parking space is on a slope or has differences in height, the vehicle may stray from the target parking space or be slanted. Therefore, do not use the function for this kind of parking spot.
- When parking in a narrow parking space, the vehicle may closely approach an adjacent parked vehicle. If a collision seems likely, depress the brake pedal to stop the vehicle.
- If a detected parked vehicle is narrow or parked extremely close to the curb, the position at which assistance will park the vehicle will also be close to the curb. If it seems likely the vehicle will collide with something or drive off of the road, depress the brake pedal to stop the vehicle, and then press the Advance Park main switch to disable the system.

Advanced Park perpendicular exiting (forward/reverse) function

When exiting from a perpendicular parking space, if the system determines that exit is possible the perpendicular exiting (forward/reverse) function can be used. Also, depending on the surrounding environment, if it is necessary to change the direction of travel of the vehicle, the shift position can be changed by assistance control.

Leaving a parking space using the perpendicular exiting (forward/reverse) function

- 1 With the brake pedal depressed and P shift position selected, press the Advanced Park main switch and check that the exit direction selection screen is displayed on the multimedia display.

- 2 Select an arrow on the multimedia display to select the direction you wish to exit.

If the turn signal lever is operated, only exit to the left or right can be selected.

- 3 Depress the brake pedal and select "Start" button.

A buzzer will sound, an operation message will be displayed on the multi-information display, and assis-

tance will begin operating.

To cancel assistance, press the Advanced Park main switch. If assistance is canceled, "Advanced Park Cancel" will be displayed.

If you feel that the vehicle is approaching close to a surrounding vehicle, object, person, or gutter: →P.448

- 4 Perform operations as indicated by the advice displays until the vehicle is in a position where exit is possible.

When the vehicle reaches a position where exit is possible, "You can exit by moving the steering wheel" will be displayed. If the steering wheel is operated, "Advanced Park Finished" will be displayed and assistance will end. As assistance will end while the vehicle is moving, grip the steering wheel and drive forward.

If the steering wheel is not operated, the vehicle will stop at the exit position. Assistance can be ended by depressing the accelerator pedal or brake pedal.

- If you feel that the vehicle is approaching close to a surrounding vehicle, object, person, or gutter

→P.446

- Perpendicular exiting (forward/reverse) function

Do not use exiting (forward/reverse) function in any situation other than when exiting a parallel parking spot. If assistance is started unintentionally, depress the brake pedal and stop the vehicle, then press the Advanced Park main switch to cancel assistance.

- Situations in which the perpendicular exiting (forward / reverse) function will not operate

In situations such as the following, the perpendicular exiting (forward/reverse) function will not operate:

- When a vehicle which is waiting to park is in the exit direction

- When a wall, column, or person is detected as near a front or rear center or corner sensor

- When the brakes have been operated

→P.446

Advanced Park Parallel parking function

The parallel parking function can be used if the target parking space can be detected when the vehicle is stopped close and aligned with the center of the parking space. Also, depending on the condition of the parking space, etc., if it is necessary to change the direction of travel of the vehicle, the shift position can be changed by assistance control.

■ Parking using the parallel parking function

- 1 Stop the vehicle with it aligned near the center of the target parking space.
- ▶ If there are parking space lines

- A** Approximately 3.3 ft. (1 m)*
- B** Approximately 19.7 ft. (6 m)*
- C** Approximately 14.8 ft. (4.5 m) or more*
- D** Approximately 26.2 ft. (8 m) or more*

*: This is a reference measurement for detection of a parking space. Depending on the surrounding environment, detection may not be possible.

- ▶ If there is an adjacent parked vehicle

- A** Approximately 3.3 ft. (1 m)*
- B** Approximately 23.0 ft. (7 m) or more*
- C** Approximately 14.8 ft. (4.5 m) or more*
- D** Approximately 26.2 ft. (8 m)

or more *

*: This is a reference measurement for detection of a parking space. Depending on the surrounding environment, detection may not be possible.

- 2 Press the Advanced Park main switch and check that a possible parking space is displayed on the multimedia display.

- If a space which your vehicle can be parked is detected, a target parking space box will be displayed.
- If it is possible to perpendicular parking (forward/reverse) in the space, select the parking space, and then select  to change to the perpendicular parking (forward/reverse) function.
- Depending on the surrounding environment, it may not be

possible to use this function. According to the information displayed on the multimedia display, use the function on another parking space.

- 3 Select "Start" button.

A buzzer will sound, an operation message will be displayed on the multi-information display, and assistance will begin operating.

- When the brake pedal is released, "Moving Forward..." will be displayed and the vehicle will begin moving forward.
- To cancel assistance, press the Advanced Park main switch.

If assistance is canceled, "Advanced Park Cancel" will be displayed.

If you feel that the vehicle is approaching close to a surrounding vehicle, object, person, or gutter: →P.451

- 4 Perform operations as indicated by the advice displays until the vehicle stops in the target parking space.

When the vehicle stops, "Advanced Park Finished" will be displayed and parking assistance will end.

If you select  on the multimedia display, the vehicle displayed on the parking assist completion screen will rotate.

■ **If you feel that the vehicle is approaching close to a surrounding vehicle, object, person, or gutter**

→P.446

■ **If “No available parking space” is displayed**

Even if the vehicle is stopped parallel to a parking space, an adjacent parked vehicle may not be detected. In this case, if the vehicle is moved to a position that a parked vehicle can be detected, assistance can be started.

■ **When the brakes have been operated**

→P.446

 **NOTICE**

■ **When using the parallel parking function**

- Make sure that there are no obstructions within the yellow guide lines and between the vehicle and target parking spot. If any obstructions are detected within the yellow guide lines or between the vehicle and the target parking space, the parallel parking function will be cancelled or suspended.
- As the target parking space will not be able to be set correctly if the surface of the parking space is on a slope or has differences in height, the vehicle may stray from the target parking space or be slanted. Therefore, do not use the parallel parking function for this kind of parking spot.

 NOTICE

- If an adjacent parked vehicle is narrow or parked extremely close to the curb, the position at which assistance will park the vehicle will also be close to the curb. If it seems likely the vehicle will collide with the curb or drive off of the road, depress the brake pedal to stop the vehicle, and then press the Advanced Park main switch to disable the system.

- If there is a wall or other barrier on the inner side of the parking space, the vehicle may stop at a position slightly outside of the set target parking space.

Advanced Park Parallel exiting function

When exiting from a parallel parking space, if the system determines that exit is possible the parallel exiting function can be used. Also, depending on the surrounding environment, if it is necessary to change the direction of travel of the vehicle, the shift position can be changed by

assistance control.

■ **Leaving a parking space using the parallel exiting function**

- 1 With the brake pedal depressed and P shift position selected, press the Advanced Park main switch and check that the exit direction selection screen is displayed on the multimedia display.

- 2 Select an arrow on the multimedia display to select the direction you wish to exit.

If the turn signal lever is operated, only exit to the left or right can be selected.

- 3 Depress the brake pedal and select "Start" button.

A buzzer will sound, an operation message will be displayed on the multi-information display, and assistance will begin operating.

To cancel assistance, press the Advanced Park main switch.

If assistance is canceled, "Advanced Park Cancel" will be dis-

played.

If you feel that the vehicle is approaching close to a surrounding vehicle, object, person, or gutter: →P.453

- 4 Perform operations as indicated by the advice displays until the vehicle is in a position where exit is possible.

When the vehicle reaches a position where exit is possible, "You can exit by moving the steering wheel" will be displayed. If the steering wheel is operated, "Advanced Park Finished" will be displayed and assistance will end. As assistance will end while the vehicle is moving, grip the steering wheel and drive forward.

If the steering wheel is not operated, the vehicle will stop at the exit position.

Assistance can be ended by depressing the accelerator pedal or brake pedal.

■ **If you feel that the vehicle is approaching close to a surrounding vehicle, object, person, or gutter**

→P.446

■ **Parallel exiting function**

Do not use parallel exiting function in any situation other than when exiting a parallel parking spot. If assistance is started unintentionally, depress the brake pedal and stop the vehicle, then press the Advanced Park main switch to cancel assistance.

■ **Situations in which the parallel exiting function will not operate**

In situations such as the following, the parallel exiting function will not operate:

- When vehicles waiting at a traffic signal in the exit direction

- When a vehicle is stopped in the area behind where the vehicle will exit

- When a wall, column, or person is detected as near a front or rear side sensor

- When the vehicle has been parked on a curb and a side sensor detects the road surface

- When a vehicle is not parked in front of the vehicle
- When there is excessive space between the front of the vehicle and a parked vehicle

■ **When the brakes have been operated**

→P.446

Advanced Park Memory function

The memory function can be used to park in a previously registered parking space, even if there are no parking space lines or adjacent parked vehicles.

Up to 3 parking spaces can be registered.

■ **Registering a parking space**

- 1 Stop the vehicle with it aligned near the center of the target parking space.

A Approximately 3.3 ft. (1 m)

- 2 Press the Advanced Park main switch and then select

If the Advanced Park main switch is pressed at a parking space without parking lines or any adjacent parked vehicles, “No available parking space” may be displayed.

Continuously select and hold .

- 3 Select perpendicular parking (forward/reverse) function or parallel parking function.

Only parking spaces for which assist can be performed are displayed.

4 Select the parking direction.

When perpendicular parking (forward/reverse) was selected in step 3:

When parallel parking was selected in step 3:

5 Using the arrow buttons, adjust the position of the parking space to be regis-

tered, and then select "OK" button.

6 Select "Start" button.

A buzzer will sound, an operation message will be displayed on the multi-information display, and assistance will begin operating.

When the brake pedal is released, "Moving Forward..." will be displayed and the vehicle will begin moving forward.

If you feel that the vehicle is approaching close to a surrounding vehicle, object, person, or gutter: →P.457

7 Perform operations as indicated by the advice displays

until the vehicle stops in the target parking space.

- 8 Check the position that the vehicle has stopped. If necessary, adjust the position of the parking spot to be registered using the arrow buttons, and then select "Reg." button.

"Registration Completed" will be displayed on the multimedia display.

- Register the parking space only if there are no obstructions within the area shown by the thick lines.
- The amount that the position of the parking spot to be registered can be adjusted is limited.

■ **When parking in a parking space registered to the memory function**

- 1 Stop the vehicle with it aligned near the center of the target parking space.

A Approximately 3.3 ft. (1 m)

- 2 Press the Advanced Park main switch and check that a possible parking space is displayed on the multimedia display.

If the "MODE" button is displayed, the button can be touched to change between the memory function, perpendicular parking (forward/reverse) function and parallel parking function.

- 3** Select the desired parking space, and then select “Start” button.

Perform the procedure for the perpendicular parking (forward/reverse) function from step **3**. (→P.444)

■ **If you feel that the vehicle is approaching close to a surrounding vehicle, object, person, or gutter**

→P.446

■ **When overwriting a registered parking space**

If the maximum number of parking spaces have been registered and  is selected, a registered parking space can be selected and then overwritten with a new parking space.

■ **When multiple parking spaces are registered**

Select the desired parking space, and then select “Start” button.

■ **When the brakes have been operated**

→P.446

 **NOTICE**

■ **When using the memory function →P.446, 451**

- The memory function is a function which provides assistance in parking in a previously registered parking space. If the condition of the road surface, vehicle, or surrounding area differs from when registration was performed, the parking space may not be able to be detected correctly or assistance may not be provided to the point that the vehicle is fully parked.
- Do not register a parking space in situations such as the following, as the set parking space may not be able to be registered or assistance may not be possible later.
 - When a camera lens is dirty or covered with water droplets
 - When it is raining or snowing
 - When the surrounding area is dark (at night, etc.)
- In situations such as the following, it may not be possible to register a parking space.
 - When there is insufficient space between the road and parking space
 - When the road surface around the parking space does not have any differences the system can recognize
- If a parking space has been registered in situations such as the following, assistance may not be able to be started later or assistance to the registered position may not be possible.

 NOTICE

- When shadows are cast on the parking space (there is a carport over the parking space, etc.)

- When there are leaves, garbage, or other objects which will likely move, in the parking space
- When the road surface around the parking space has the same repeating pattern (brick, etc.)

- In situations such as the following, it may not be possible for the system to provide assistance to a registered parking spot:
 - When the appearance of the parking space is affected by the shadow of the vehicle or trees
 - When an object is detected in the registered parking space
 - When a pedestrian or passing vehicle is detected during assistance

- When the position the vehicle is stopped when assistance is started differs from the position when registration was performed
- When the registered parking space cannot be reached due to the existence of parking blocks, etc.
- When the road surface around the parking space has changed (road surface has degraded or been resurfaced)
- When the sunlight conditions differ from when registration was performed (due to weather or time of day)
- When the sun is shining directly into a camera, such as in the early morning or evening
- When the color or brightness of the road surface is uneven
- When a light is temporarily shined on the parking space (lights of another vehicle, security light, etc.)
- When the road surface around the parking space has the same repeating pattern
- When there is a low protrusion on the road surface near the parking space
- When the parking space is on a slope
- When a camera has been splashed by hot or cold water and the lens has fogged up
- When a camera lens is dirty or covered with water droplets
- When accessories which obstruct the view of the camera are installed

**NOTICE**

If assistance is ended during registration, perform registration again.

- When registering a parking space to the memory function, if the road surface cannot be detected “No available parking space to register” will be displayed.
- When using the memory function, make sure to stop immediately in front of the stop position. Otherwise the parking space may not be able to be detected correctly or assistance may not be provided to the point that the vehicle is fully parked.
- Do not use the memory function if a camera has been subjected to a strong impact or images of the panoramic view monitor are misaligned.
- If a camera has been replaced, as the installation angle of the camera will have changed, it will be necessary to reregister parking spaces of the memory function.

Advanced Park cancellation/suspension**■ Assistance will be canceled when**

In situations such as the following, Advanced Park operation will be canceled. Firmly hold the steering wheel and depress the brake pedal to stop the vehicle.

As system operation has been canceled, begin the operation again or continue parking manually, using

the steering wheel.

- The Advanced Park main switch is pushed
- The shift position has been changed to P
- The parking brake is engaged
- A door or the trunk is opened
- The driver’s seat belt is unfastened
- The outside rear view mirrors are folded
- The TRAC or VSC is turned off
- The TRAC, VSC or ABS operates
- The power switch is pressed
- The system determines assistance cannot be continued in the current parking environment
- The system malfunctions
- While the vehicle was stopped, “Cancel” was selected on the multimedia display

■ Assistance will be suspended when

In situations such as the following, Advanced Park operation will be suspended.

Assistance can be started again by following the directions displayed on the multimedia display.

Also, when assistance is suspended, if the shift position is changed twice with the brake pedal

depressed, assistance will be canceled in that shift position. However, if assistance is suspended by changing the shift position, assistance will be canceled if the shift position is changed once.

- The steering wheel is operated
- The accelerator pedal is depressed
- The shift position has been changed
- A moving object or stationary object that may collide with your vehicle has been detected, resulting in the operation of the fuel cell system output control/braking control
- Camera switch is pressed

Changing the Advanced Park settings

Select  on the multimedia display, and then select “Advanced Park”.

■ Speed Profile

The vehicle speed for when assistance is performed can be set.

This setting cannot be changed when registering a parking space to the memory function.

■ Obstacle detection range

The distance from which obstacles will be avoided while assis-

tance is being performed can be set.

■ Preferred parking method

The preferred parking direction displayed when at a parking space which perpendicular (forward/reverse) or parallel parking is possible can be set.

■ Preferred parking direction

The preferred parking direction displayed when it is possible to pull perpendicular forward or reverse into a parking space can be selected.

■ Preferred exit direction (perpendicular)

The preferred exit direction displayed when it is possible to pull forward or reverse to the left or right out of a parking space can be selected.

■ Preferred exit direction (parallel)

The preferred exit direction displayed when it is possible to exit to the left or right from a parallel parking space can be selected.

■ Camera view when parking

The display angle of the camera image when using the perpendicular parking (forward/reverse) function or parallel parking function can be set.

■ Camera view when exiting

The display angle of the camera

image when using the perpendicular exiting (forward/reverse) function or parallel parking exit function can be set.

■ Parking path adjustment

The course for when parking assistance is operating can be adjusted inward or outward.

If the tires are worn, the path of vehicle may be offset from the center of the parking space. In this case, use this setting to adjust the parking course.

■ Road width adjustment

When parking assistance is started, the amount of lateral movement while the vehicle is moving forward can be adjusted.

■ Park position adjustment (forward)

The position at which perpendicular parking (forward) is completed can be adjusted. (Except when using the memory function.)

■ Park position adjustment (reverse)

The position at which perpendicular parking (reverse) is completed can be adjusted. (Except when using the memory function.)

■ Rear accessory setting

If an accessory, such as a trailer hitch, has been installed to the rear of the vehicle, the length of

the rear of the vehicle can be adjusted to help avoid colliding with objects to the rear of the vehicle.

■ Clear registered parking space

The parking spaces registered to the memory function can be deleted. Parking space information cannot be deleted when assistance is being performed or when registering parking space information to the memory function.

NOTICE

Take care when using the park position adjustment (forward) or park position adjustment (reverse) for adjusting because the vehicle may collide with parking blocks, curb stones, or other low objects. If it is likely that your vehicle will collide with a nearby vehicle/object, parking block, curb stone, etc., depress the brake pedal to stop the vehicle and press the Advanced Park main switch to disable the system.

Advanced Park Displayed messages

The operating state, assistance operation, etc. of the Advanced Park is displayed on the multimedia display. If a message is displayed, respond according to the content displayed.

■ If “No available parking space” is displayed

Move the vehicle to a location where

a parking space or parking lines can be detected.

■ **If “Unavailable in current condition” is displayed**

Move the vehicle to another location and use the system.

■ **If “Not enough space to exit” is displayed**

The parallel parking exit function cannot be used due to a situation such as the distance between your vehicle and vehicles parked in front of and behind your vehicle being short, the existence of an object in the exit direction, etc.

Check the conditions of the area around your vehicle and exit from the parking space manually.

■ **If “Cannot control speed” is displayed**

The system judged that it cannot adjust the speed of the vehicle when using the system in an area with a slope or step and assistance was canceled.

Use the system in a level location.

■ **If “Obstacle detected” is displayed**

As a moving object or stationary object that may collide with your vehicle has been detected, the fuel cell system output control/braking control operates to suspend Advanced Park assistance.

Check the condition of the surrounding area. To resume assistance, select the “Start” button on the multi-media display.

■ **If “No available parking space to register” is displayed**

This message is displayed when  is selected at a parking space that cannot be detected.

Operate the system at a parking space where differences in the road surface can be recognized. (→P.454)

Driving mode select switch

The driving modes can be selected to suit driving condition.

Selecting a drive mode

A Multi-information display

B Driving mode select switch

Driving mode changes if the switch is pressed.

1 Normal mode

Provides an optimal balance of fuel economy, quietness, and dynamic performance. Suitable for normal driving.

2 Sport mode

Controls the transmission and fuel cell system to provide quick, powerful acceleration. Making it suitable for when agile driving response is desired, such as when driving on roads with many curves.

When the sport mode is selected, sport mode indicator comes on.

3 Eco drive mode

Helps the driver accelerate in an eco friendly manner and improve fuel economy through moderate throttle characteristics and by controlling the operation of the air conditioning system (heating/ cooling). When the Eco drive mode is selected, Eco drive mode indicator comes on.

■ Operation of the air conditioning system in Eco drive mode

Eco drive mode controls the heating/ cooling operations and fan speed of the air conditioning system to enhance fuel efficiency. To improve air conditioning performance, perform the following operations:

- Turn off eco air conditioning mode (→P.476)
- Adjust the fan speed (→P.476)
- Turn off Eco drive mode

■ Automatic deactivation of sport mode

If the power switch is turned off after driving in sport mode, the drive mode will be changed to normal mode.

Snow mode

Snow mode can be selected to suit the conditions when driving on slippery road surfaces, such as on snow.

System operation

Press the snow mode switch

When the switch is pressed, snow mode turns on and the snow mode indicator illuminates on the multi-information display. When the switch is pressed again, the snow mode indicator turns off.

► Type A

► Type B

■ Snow mode automatic deactivation

Snow mode is automatically deactivated if the power switch is turned

off after driving in snow mode.

Driving assist systems

To keep driving safety and performance, the following systems operate automatically in response to various driving situations. Be aware, however, that these systems are supplementary and should not be relied upon too heavily when operating the vehicle.

Summary of the driving assist systems

■ **ECB (Electronically Controlled Brake System)**

The electronically controlled system generates braking force corresponding to the brake operation

■ **ABS (Anti-lock Brake System)**

Helps to prevent wheel lock when the brakes are applied suddenly, or if the brakes are applied while driving on a slippery road surface

■ **Brake assist**

Generates an increased level of braking force after the brake pedal is depressed when the system detects a panic stop situation

■ **VSC (Vehicle Stability Control)**

Helps the driver to control skidding when swerving suddenly or turning on slippery road surfaces.

■ **TRAC (Traction Control)**

Helps to maintain drive power and prevent the drive wheels from spinning when starting the vehicle or accelerating on slippery roads

■ **Active Cornering Assist (ACA)**

Helps to prevent the vehicle from drifting to the outer side by performing inner wheel brake control when attempting to accelerate while turning

■ **Hill-start assist control**

Helps to reduce the backward movement of the vehicle when starting on an uphill

■ **EPS (Electric Power Steering)**

Employs an electric motor to reduce the amount of effort needed to turn the steering wheel.

■ **VDIM (Vehicle Dynamics Integrated Management)**

Provides integrated control of the ABS, brake assist, TRAC, VSC, hill-start assist control and EPS systems

Helps to maintain vehicle stability when swerving on slippery

road surfaces by controlling the brakes, fuel cell system output, steering assist.

■ **The Secondary Collision Brake**

When the SRS airbag sensor detects a collision and the system operates, the brakes and brake lights are automatically controlled to reduce the vehicle speed and help reduce the possibility of further damage due to a secondary collision.

■ **When the TRAC/VSC/ABS systems are operating**

The slip indicator light will flash while the TRAC/VSC/ABS systems are operating.

■ **Disabling the TRAC system**

If the vehicle gets stuck in mud, dirt or snow, the TRAC system may reduce power from the fuel cell system to the wheels. Pressing  to turn the system off may make it easier for you to rock the vehicle in order to free it.

To turn the TRAC system off, quickly press and release .

The “Traction Control Turned OFF” will be shown on the multi-information display.

Press  again to turn the system back on.

A "Traction Control Turned OFF"

Turning off both TRAC and VSC systems

To turn the TRAC and VSC systems off, press and hold  for more than 3 seconds while the vehicle is stopped.

The VSC OFF indicator light will come on and the "Traction Control Turned OFF" will be shown on the multi-information display.*

Press  again to turn the system back on.

*: PCS will also be disabled (only Pre-Collision warning is available). The PCS warning light will come on and a message will be displayed on the multi-information display. (→P.274, 613)

When the message is displayed on the multi-information display showing that TRAC has been disabled even if  has not been pressed

TRAC is temporary deactivated. If the information continues to show, contact your Toyota dealer.

Operating conditions of hill-start assist control

When the following five conditions are met, the hill-start assist control will operate:

- The shift position is in a position other than P or N (when stating off forward/backward on an upward incline)
- The vehicle is stopped
- The accelerator pedal is not depressed
- The parking brake is not engaged
- Power switch is turned to ON

Automatic system cancelation of hill-start assist control

The hill-start assist control will turn off in any of the following situations:

- Shift the shift position to P or N
- The accelerator pedal is depressed
- The parking brake is engaged
- 2 seconds at maximum elapsed after the brake pedal is released
- Power switch is turned to OFF

Sounds and vibrations caused by the ABS, brake assist, VSC, TRAC and hill-start assist control systems

- A sound may be heard from the fuel cell unit compartment when the brake pedal is depressed repeatedly, when the fuel cell system is started or just after the vehicle begins to move. This sound does not indicate that a malfunction has occurred in any of these systems.
- Any of the following conditions may occur when the above systems are operating. None of these indicates that a malfunction has occurred.
 - Vibrations may be felt through the vehicle body and steering.
 - A motor sound may be heard also after the vehicle comes to a stop.

- The brake pedal may pulsate slightly after the ABS is activated.
- The brake pedal may move down slightly after the ABS is activated.

■ **ECB operating sound**

ECB operating sound may be heard in the following cases, but it does not indicate that a malfunction has occurred.

- Operating sound heard from the fuel cell unit compartment when the brake pedal is operated.
- Motor sound of the brake system heard from the front part of the vehicle when the driver's door is opened.
- Operating sound heard from the fuel cell unit compartment when one or two minutes passed after the stop of the fuel cell system.

■ **Active Cornering Assist operation sounds and vibrations**

When the Active Cornering Assist is operated, operation sounds and vibrations may be generated from the brake system, but this is not a malfunction.

■ **Automatic reactivation of TRAC and VSC systems**

After turning the TRAC and VSC systems off, the systems will be automatically re-enabled in the following situations:

- When the power switch is turned off
 - If only the TRAC system is turned off, the TRAC will turn on when vehicle speed increases
- If both the TRAC and VSC systems are turned off, automatic re-enabling will not occur when vehicle speed increases.

■ **Operating conditions of Active Cornering Assist**

The system operates when the following occurs.

- TRAC/VSC can operate
- The driver is attempting to accel-

erate while turning

- The system detects that the vehicle is drifting to the outer side
- The brake pedal is released

■ **Reduced effectiveness of the EPS system**

The effectiveness of the EPS system is reduced to prevent the system from overheating when there is frequent steering input over an extended period of time. The steering wheel may feel heavy as a result. Should this occur, refrain from excessive steering input or stop the vehicle and turn the fuel cell system off. The EPS system should return to normal within 10 minutes.

■ **Secondary Collision Brake operating conditions**

The system operates when the SRS airbag sensor detects a collision while the vehicle is in motion. However, the system does not operate in any of the following situations.

- When driving at a low speed
- Components are damaged

■ **Secondary Collision Brake automatic cancelation**

The system is automatically canceled in any of the following situations.

- The vehicle speed has decreased to a certain speed
- A certain amount of time elapses during operation
- The accelerator pedal is depressed a large amount

 **WARNING**

■ **The ABS does not operate effectively when**

- The limits of tire gripping performance have been exceeded (such as excessively worn tires on a snow covered road).

 **WARNING**

- The vehicle hydroplanes while driving at high speed on wet or slick roads.

■ **Stopping distance when the ABS is operating may exceed that of normal conditions**

The ABS is not designed to shorten the vehicle's stopping distance. Always maintain a safe distance from the vehicle in front of you, especially in the following situations:

- When driving on dirt, gravel or snow-covered roads
- When driving with tire chains
- When driving over bumps in the road
- When driving over roads with potholes or uneven surfaces

■ **TRAC/VSC may not operate effectively when**

Directional control and power may not be achievable while driving on slippery road surfaces, even if the TRAC/VSC system is operating. Drive the vehicle carefully in conditions where stability and power may be lost.

■ **Active Cornering Assist does not operate effectively when**

- Do not overly rely on Active Cornering Assist. Active Cornering Assist may not operate effectively when accelerating down slopes or driving on slippery road surfaces.
- When Active Cornering Assist frequently operates, Active Cornering Assist may temporarily stop operating to ensure proper operation of the brakes, TRAC and VSC.

■ **Hill-start assist control does not operate effectively when**

- Do not overly rely on hill-start assist control. Hill-start assist control may not operate effectively on steep inclines and roads covered with ice.
- Unlike the parking brake, hill-start assist control is not intended to hold the vehicle stationary for an extended period of time. Do not attempt to use hill-start assist control to hold the vehicle on an incline, as doing so may lead to an accident.

■ **When the TRAC/ABS/VSC is activated**

The slip indicator light flashes. Always drive carefully. Reckless driving may cause an accident. Exercise particular care when the indicator light flashes.

■ **When the TRAC/VSC systems are turned off**

Be especially careful and drive at a speed appropriate to the road conditions. As these are the systems to help ensure vehicle stability and driving force, do not turn the TRAC/VSC systems off unless necessary.

■ **Secondary Collision Brake**

Do not rely solely upon the Secondary Collision Brake. This system is designed to help reduce the possibility of further damage due to a secondary collision, however, that effect changes according to various conditions. Overly relying on the system may result in death or serious injury.

**WARNING****■ Replacing tires**

Make sure that all tires are of the specified size, brand, tread pattern and total load capacity. In addition, make sure that the tires are inflated to the recommended tire inflation pressure level.

The ABS, TRAC and VSC systems will not function correctly if different tires are installed on the vehicle.

Contact your Toyota dealer for further information when replacing tires or wheels.

■ Handling of tires and the suspension

Using tires with any kind of problem or modifying the suspension will affect the driving assist systems, and may cause a system to malfunction.

Winter driving tips

Carry out the necessary preparations and inspections before driving the vehicle in winter. Always drive the vehicle in a manner appropriate to the prevailing weather conditions.

Preparation for winter

- Use washer fluid that is appropriate to the prevailing outside temperatures.
- Have a service technician inspect the condition of the 12-volt battery.
- Have the vehicle fitted with four snow tires or purchase a set of tire chains for the rear tires.

Ensure that all tires are the specified size and brand, and that chains match the size of the tires.

WARNING

■ Driving with snow tires

Observe the following precautions to reduce the risk of accidents. Failure to do so may result in a loss of vehicle control and cause death or serious injury.

- Use tires of the specified size.
- Maintain the recommended level of air pressure.
- Do not drive in excess of 75 mph (120 km/h), regardless of the type of snow tires being used.

- Use snow tires on all, not just some wheels.

■ Driving with tire chains

Observe the following precautions to reduce the risk of accidents. Failure to do so may result in the vehicle being unable to be driven safely, and may cause death or serious injury.

- Do not drive in excess of the speed limit specified for the tire chains being used, or 30 mph (50 km/h), whichever is lower.
- Avoid driving on bumpy road surfaces or over potholes.
- Avoid sudden acceleration, abrupt steering, sudden braking, and sudden deceleration using Br mode.
- Slow down sufficiently before entering a curve to ensure that vehicle control is maintained.
- Do not use LTA (Lane Tracing Assist) system.

NOTICE

■ Repairing or replacing snow tires

Request repairs or replacement of snow tires from Toyota dealers or legitimate tire retailers. This is because the removal and attachment of snow tires affects the operation of the tire pressure warning valves and transmitters.

Before driving the vehicle

Perform the following according to the driving conditions:

- Do not try to forcibly open a window or move a wiper that is frozen. Pour warm water

over the frozen area to melt the ice. Wipe away the water immediately to prevent it from freezing.

- To ensure proper operation of the climate control system fan, remove any snow that has accumulated on the air inlet vents in front of the windshield.
- Check for and remove any excess ice or snow that may have accumulated on the exterior lights, outside rear view mirrors, windows, vehicle's roof, chassis, around the tires or on the brakes.
- Remove any snow or mud from the bottom of your shoes before getting in the vehicle.

■ When using the door mirrors in automatic mode in cold weather

When automatic mode is used in cold weather, the door mirror could freeze up and automatic stowing and return may not be possible. In this case, remove any ice and snow from the door mirror, then either operate the mirror using manual mode or move the mirror by hand.

■ When driving the vehicle

Accelerate the vehicle slowly, keep a safe distance between you and the vehicle ahead, and drive at a reduced speed suitable to road conditions.

■ When parking the vehicle

- Turn automatic mode of the parking brake off. Otherwise, the parking brake may freeze and not be able to be released automatically. Also, avoid using the following as the parking brake may operate automatically, even if automatic mode is off.
 - Brake hold system
- Park the vehicle and shift the shift position to P without setting the parking brake. The parking brake may freeze up, preventing it from being released. If the vehicle is parked without setting the parking brake, make sure to block the wheels. Failure to do so may be dangerous because it may cause the vehicle to move unexpectedly, possibly leading to an accident.
- When the parking brake is in automatic mode, release the parking brake after shifting the shift position to P. (→P.232)
- If the vehicle is parked without setting the parking brake, confirm that the shift position cannot be moved out of P.
- If the vehicle is left parked with the brakes damp in cold temperatures, there is a possibility of the brakes freezing.

Selecting tire chains

Use the correct tire chain size when mounting the tire chains. Chain size is regulated for each tire size.

A Side chain (0.12 in. [3 mm] in diameter)

B Cross chain (0.16 in. [4 mm] in diameter)

Regulations on the use of tire chains

Regulations regarding the use of tire chains vary depending on location and type of road. Always check local regulations before installing chains.

■ Tire chain installation

Observe the following precautions when installing and removing chains:

- Install and remove tire chains in a safe location.
- Install tire chains on the rear tires. Do not install tire chains on the front tires.
- Install tire chains on the rear tires as tightly as possible. Retighten chains after driving 1/4—1/2 mile

(0.5—1.0 km).

- Install tire chains following the instructions provided with the tire chains.

NOTICE

■ Fitting tire chains

The tire pressure warning valves and transmitters may not function correctly when tire chains are fitted.

Windshield wipers

To enable the windshield wipers to be lifted when heavy snow or icy conditions are expected, change the rest position of the windshield wipers from the retracted position below the hood to the service position using the wiper lever. (→P.251)

ALL AUTO control

The seat heaters seat ventilators (if equipped) and heated steering wheel (if equipped) are each automatically controlled according to the set temperature of the air conditioning system, the outside and cabin temperature, etc. ALL AUTO control allows a comfortable condition to be maintained without adjusting each system.

Turning on ALL AUTO control

Touch "All auto" on the air conditioning control screen. (→P.481)

The indicator on the "All auto" control screen illuminates, and the automatic air conditioning system, seat heaters and ventilators, and heated steering wheel operate in automatic mode.

If any of the system is operated manually, the indicator turns off. However, all other functions continue to operate in automatic mode.

Operation of each system

■ Automatic air conditioning system (→P.475)

The temperature can be adjusted independently for each seat.

■ Seat heaters and seat ventilators (if equipped) (→P.486)

Heating or ventilation is automatically selected according to the set temperature of the air conditioning system, the outside temperature, etc.

■ Heated steering wheel (if equipped) (→P.486)

Heated steering wheel operates automatically according to the set temperature of the air conditioning system, the outside temperature, etc.

■ Passenger detection functions

When a passenger is detected in the front passenger seat, the seat heater and ventilator will operate automatically.

■ Seat heater/ventilator operation (if equipped)

When automatic mode is selected using the seat heater/ventilator switch, passenger detection is not performed.

■ Rear seat heater operation (vehicles with 3-ZONE climate control)

The rear seat heaters are not controlled by the ALL AUTO control.

Automatic air conditioning system

Air outlets and fan speed are automatically adjusted according to the temperature setting.

The air conditioning system can be operated using the air conditioning control panel and air conditioning control screen.

Air conditioning controls

- A** Multimedia display
- B** “AUTO” switch
- C** Windshield defogger switch
- D** Fan speed increase switch
- E** “CLIMATE” switch
- F** Right-hand side temperature control switches
- G** “COMFORT” switch *
- H** Fan speed decrease switch
- I** Rear window and outside rear view mirror defoggers switch
- J** “OFF” switch
- K** Left-hand side temperature control switches

*: If equipped

■ Adjusting the temperature setting

Press  of the temperature control switches on the air conditioning control panel to increase the temperature.

Press  of the temperature control switches on the air conditioning control panel to decrease the temperature.

If the switch is pressed and held or selected and held, the temperature will continuously change.

If the "A/C" indicator is turned off, the system will blow ambient temperature air or heated air. (→P.481)

■ Setting the fan speed

Press the fan speed increase switch on the air conditioning control panel to increase the fan speed.

Press the fan speed decrease switch on the air conditioning control panel to decrease the fan speed.

Press the "OFF" switch on the air conditioning control panel to turn the fan off.

■ Change the airflow mode

Select the airflow mode control switch on the air conditioning control screen.

The airflow mode changes each time the switch is selected.

: Air flows to the upper body

: Air flows to the upper body and feet

: Air flows to the feet

: Air flows to the feet and the windshield defogger operates

■ Switching between outside air and recirculated air modes

Select the outside/recirculated air mode switch on the air conditioning control screen.

The mode switches between outside air mode and recirculated air mode each time the switch is selected.

When recirculated air mode is selected, the indicator illuminates on the outside/recirculated air mode switch.

■ Set cooling and dehumidification function

Select the "A/C" switch on the air conditioning control screen.

When the function is on, the indicator illuminates on the "A/C" switch.

■ Eco air conditioning mode

The air conditioning is controlled with low fuel consumption prioritized such as reducing fan speed, etc.

Select the eco air conditioning mode switch on the air conditioning control screen.

When the eco air conditioning mode is on, the indicator illuminates on the eco air conditioning mode switch.

■ **Defogging the windshield**

Defoggers are used to defog the windshield and front side windows.

Press the windshield defogger switch on the air conditioning control panel.

Set the outside/recirculated air mode switch to outside air mode if the recirculated air mode is used. (It may switch automatically.)

To defog the windshield and the side windows quickly, turn the air flow and temperature up.

To return to the previous mode, press the windshield defogger switch again when the windshield is defogged.

When the windshield defogger switch is on, the indicator illuminates on the windshield defogger switch.

■ **Defogging the rear window and outside rear view mirrors**

Defoggers are used to defog the rear window and to remove raindrops, dew and frost from the outside rear view mirrors.

Press the rear window and outside rear view mirror defoggers switch on the air conditioning control panel.

The defoggers will automatically turn off after 15 minutes.

When the rear window and outside rear view mirror defoggers switch is on, the indicator illuminates on the rear window and outside rear view mirror defoggers switch.

■ **When the outside temperature exceeds 75°F (24°C) and the air conditioning system is on**

- In order to reduce the air conditioning power consumption, the air conditioning system may switch to recirculated air mode automatically. This may also reduce fuel consumption.
- Recirculated air mode is selected as a default mode when the power switch is turned to ON.
- It is possible to switch to outside air mode at any time by selecting the outside/recirculated air mode switch.

■ **Fogging up of the windows**

- The windows will easily fog up when the humidity in the vehicle is high. Turning the cooling and dehumidification function on will dehumidify the air from the outlets and defog the windshield effectively.
- If you turn the cooling and dehumidification function off, the windows may fog up more easily.
- The windows may fog up if the recirculated air mode is used.

■ **When driving on dusty roads**

Close all windows. If dust thrown up by the vehicle is still drawn into the vehicle after closing the windows, it is recommended that the air intake mode be set to outside air mode and the fan speed to any setting except off.

■ **Windshield fog detection function (Vehicles with Toyota Teammate Advanced Drive)**

When automatic mode is set, the

humidity sensor detects fog on the windshield and controls the air conditioning system to prevent fog.

■ Outside/recirculated air mode

- Setting to the recirculated air mode temporarily is recommended in preventing dirty air from entering the vehicle interior and helping to cool the vehicle when the outside air temperature is high.
- Outside/recirculated air mode may automatically switch depending on the temperature setting or the inside temperature.

■ When the outside temperature falls to nearly 32°F (0°C)

The dehumidification function may not operate even when "A/C" switch is selected.

■ Operation of the air conditioning system in Eco drive mode

- In Eco drive mode, the air conditioning system is controlled as follows to prioritize fuel efficiency:
 - Fuel cell system and compressor operation controlled to restrict heating/cooling capacity
 - Fan speed restricted when automatic mode is selected
- To improve air conditioning performance, perform the following operations:
 - Adjust the fan speed
 - Turn off Eco drive mode (→P.462)
 - Turn off Eco air conditioning mode
- When the driving mode is set to Eco drive mode, the Eco air conditioning mode will be turned on automatically. Even in this case, the Eco air conditioning mode can be turned off by selecting the Eco air conditioning mode switch.

■ When cleaning the air conditioning control panel

Touch switches may respond when cleaning. Turn the power switch to OFF before proceeding with cleaning.

■ Ventilation and air conditioning odors

- To let fresh air in, set the air conditioning system to the outside air mode.
- During use, various odors from inside and outside the vehicle may enter into and accumulate in the air conditioning system. This may then cause odor to be emitted from the vents.
- In order to suppress odors that occur when the air conditioning system starts, the air flow mode may change to blow air to the feet or air may stop blowing for a short period of time immediately after the air conditioning system is started in automatic mode.
- When parking, the system automatically switches to outside air mode to encourage better air circulation throughout the vehicle, helping to reduce odors that occur when starting the vehicle.

■ Air conditioning filter

→P.588

■ Air conditioning system refrigerant

- A label regarding the refrigerant of the air conditioning system is attached to the hood at the location shown in the following illustration.

● The meaning of each symbol on the label are as follows:

	Caution
	Air conditioning system
	Air conditioning system lubricant type
	Requires registered technician to service air conditioning system
	Flammable refrigerant

■ **Customization**

Some functions can be customized. (Customizable features: →P.691)

⚠ WARNING

■ **To prevent the windshield from fogging up**
Do not use the windshield defogger switch during cool air operation in extremely humid weather. The difference between the temperature of the outside air and that of the windshield can cause the outer surface of the windshield to fog up, blocking your vision.

■ **When the outside rear view mirror defoggers are operating**
Do not touch the rear view mirror surfaces when the outside rear view mirror defoggers are on.

⚠ NOTICE

■ **To prevent 12-volt battery discharge**
Do not leave the air conditioning system on longer than necessary when the fuel cell system is off.

■ **Humidity sensor (Vehicles with Toyota Teammate Advanced Drive)**
In order to detect fog on the windshield, a sensor which monitors the temperature of the windshield, the surround humidity, etc. is installed. Follow these points to avoid damaging the sensor:

- Do not disassemble the sensor
- Do not spray glass cleaner on the sensor or subject it to strong impacts
- Do not stick anything on the sensor

Using automatic mode

- 1** Press the “AUTO” switch on the air conditioning control panel.
 - 2** Adjust the temperature setting.
 - 3** To stop the operation, press the “OFF” switch on the air conditioning control panel.
- If the fan speed setting or air flow modes are operated, the automatic mode indicator goes off. However, automatic mode for functions other than that operated is maintained.

■ Using automatic mode

Fan speed is adjusted automatically according to the temperature setting and the ambient conditions.

Therefore, the fan may stop for a while until warm or cool air is ready to flow immediately after the automatic mode switch is pressed.

Adjusting the temperature for driver and passenger seats simultaneously (“SYNC” mode)

- ▶ Vehicles with DUAL-ZONE climate control

To turn on the “DUAL” mode, select the “SYNC” switch on the air conditioning control screen.

The driver’s side temperature control switches can be used to adjust the temperature for the driver’s and passenger’s side. To enter individual mode, operate the passenger’s side temperature control switches or select the “SYNC” switch again.

When the “DUAL” mode is on, the indicator illuminates on the “SYNC” switch.

- ▶ Vehicles with 3-ZONE climate control

To turn on the “3-ZONE” mode, select the “SYNC” switch on the air conditioning control screen.

The driver’s side temperature control switches can be used to adjust the temperature for the driver’s and passenger’s side. To enter individual mode, operate the passenger’s side temperature control switches or select the “SYNC” switch again.

When the “3-ZONE” mode is on, the indicator illuminates on the “SYNC” switch.

Front seat concentrated airflow mode (S-FLOW)

This function automatically controls the air conditioning airflow so that priority is given to the front seats.

Vehicles with 3-ZONE climate control (Vehicles without Toyota Teammate Advanced Drive):
When the front passenger seat is not occupied, airflow may switch to only the front seat.

Vehicles with 3-ZONE climate control (Vehicles with Toyota Teammate Advanced Drive):
When the front passenger seat is not occupied, airflow may switch to only the driver’s seat.

Unnecessary air conditioning is suppressed, contributing to increased fuel efficiency.

Front seat concentrated airflow mode operates in the following situations.

- No passengers are detected in the rear seats
- The windshield defogger is not operating

While operating,  illuminates.

■ **Manually turning front seat concentrated airflow mode on/off**

In front seat concentrated airflow mode, directing airflow to the front seats only and to all seats can be switched via switch operation. When the mode has been switched manually, automatic airflow control stops operating.

Touch  on the air conditioning airflow control screen of the multimedia display.

- Indicator illuminated: Airflow to the front seats only
- Indicator off: Airflow to the all seats

■ **Operation of automatic airflow control**

- In order to maintain a comfortable interior, airflow may be directed to seats without passengers immediately after the fuel cell system is started and at other times depending on the outside temperature.
- After the fuel cell system is started, if passengers move around inside or enter/exit the vehicle, the system cannot accurately detect the presence of passengers and automatic airflow control will not operate.

■ **Operation of manual airflow control**

Even if the function is manually switched to directing airflow to only the front seats, when a rear seat is occupied, it may automatically direct airflow to all seats.

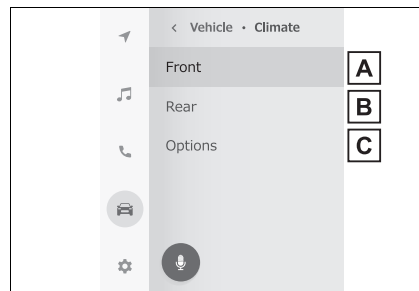

■ **To return to automatic airflow control**

- 1 With the indicator off, turn the power switch to OFF.
- 2 After 60 minutes or more elapse, turn the power switch to ON.

Air conditioning control screen

■ **Display procedure**

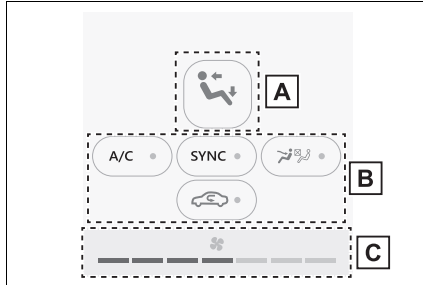

- 1 Touch  on the main menu on the multimedia display.
- 2 Touch “Climate” on the sub menu.
- 3 Select any screen.

- A** Displays the front air conditioning control screen.
- B** Displays the rear air conditioning control screen.
- C** Displays the option control screen.

■ **Air conditioning control screen**

When the “CLIMATE” switch on the air conditioner control panel is pressed, the screen switches as shown below.

A Select the air flow mode

Each time the switch is touched, the air flow mode changes.

: Air flows to the upper body

: Air flows to the upper body and feet

: Air flows to the feet

: Air flows to the feet and the windshield defogger operates

B Turns each function on/off

Each time the switch is touched, the function turns on/off.

When the function is on, the indicator on the switch illuminates.

“A/C”: Cooling and dehumidification function (→P.476)

“SYNC”: “SYNC” mode (→P.480)

: Front seat concentrated air-flow mode (S-FLOW) (→P.480)

: Outside/recirculated air mode (→P.474)

C Fan speed display

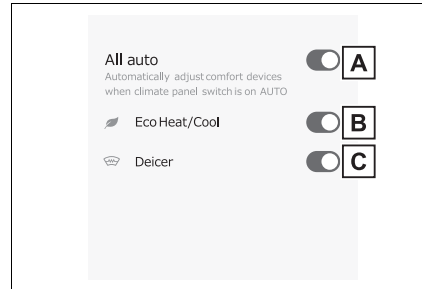

Setting of the fan speed is dis-

played.

■ Option control screen

The functions can be switched

(ON) and (OFF).

A ALL AUTO mode* (→P.474)

B Eco air conditioning mode (→P.478)

C Windshield wiper de-icer* (→P.482)

*: If equipped

Windshield wiper de-icer (if equipped)

This feature is used to prevent ice from building up on the windshield and wiper blades.

The functions can be switched

(ON) and (OFF).

Touch Windshield wiper de-icer on the multimedia display.

The indicator comes on when the system is on.

The windshield wiper de-icer will automatically turn off after approximately 15 minutes.

A Windshield wiper de-icer

⚠ WARNING

■ To prevent burns

Do not touch the glass at lower part of the windshield or to the side of the front pillars when the windshield wiper deicer is on.

Rear air conditioning control screen

If you do not operate for more than 20 seconds after switching to the rear air conditioner operation screen, it will return to the front air conditioner operation screen.

A Adjust the rear seat temperature setting

Air outlet layout and operations

■ Location of air outlets

The air outlets and air volume change according to the selected air flow mode.

■ Adjusting the air flow direction and opening/closing the air outlets

► Front

- 1** Direct air flow to the left or right, up or down
- 2** Open the vent
- 3** Close the vent

► Rear

- 1 Direct air flow to the left or right, up or down
- 2 Open the vent
- 3 Close the vent

⚠ WARNING

■ **To not interrupt the windshield defogger from operating**

Do not place anything on the instrument panel which may cover the air outlets. Otherwise, air flow may be obstructed, preventing the windshield defoggers from defogging.

Rear automatic air conditioning system*

*: If equipped

The air outlets and fan speed are automatically adjusted according to the temperature setting.

Rear air conditioning control

■ **Rear control panel**

The rear A/C can be operated by turning the rear control panel ON using the ON/OFF switch.

When the front seat A/C is OFF, the rear A/C cannot be turned ON independently.

A Rear control panel ON/OFF switch.

- B** Rear seat Airflow mode control switch
- C** Rear seat temperature control switch

Adjusting the temperature setting of the rear seats

The temperature setting of the rear seats can be adjusted using the following methods:

- When the “SYNC” indicator is off: Adjust the driver’s seat temperature.
- Adjust the temperature setting of rear seat using the multi-media display (rear air conditioning control screen) or rear control panel.

Air outlet layout and operations

■ **Location of air outlets**

The air outlets and air volume changes according to the selected air flow mode.

: Air flows to the upper body

: Air flows to the upper body and feet

: Air flows to the feet

■ **Adjusting the position of and opening and closing the air outlets**

► **Rear**

- 1** Direct air flow to the left or right, up or down
- 2** Open the vent
- 3** Close the vent

 **NOTICE**

■ **To prevent 12-volt battery discharge**

Do not leave the air conditioning system on longer than necessary when the fuel cell system is off.

Heated steering wheel^{*} / seat heaters / seat ventilators^{*}

^{*}: If equipped

- Heated steering wheel

Warms up the grip of the steering wheel

- Front seat heaters/Rear seat heaters

Warm up the seat upholstery

- Front seat ventilators/Rear seat ventilators

Maintain good ventilation by pulling air through the seat upholstery

WARNING

- To prevent minor burn injuries

Care should be taken if anyone in the following categories comes in contact with the steering wheel or seats when the heater is on:

- Babies, small children, the elderly, the sick and the physically challenged
- Persons with sensitive skin
- Persons who are fatigued
- Persons who have taken alcohol or drugs that induce sleep (sleeping drugs, cold remedies, etc.)

NOTICE

- To prevent damage to the seat heaters and seat ventilators

Do not put heavy objects that have an uneven surface on the seat and do not stick sharp objects (needles, nails, etc.) into the seat.

- To prevent 12-volt battery discharge

Do not use the functions when the fuel cell system is off.

Operating instructions

■ Front air conditioner controls

Press the “COMFORT” switch on the air conditioner control panel. Select the front or rear.

► Front

A Adjust the seat heater temperature level

The seat heater can be adjusted in 3 levels. (Low, Mid or Hi)

B Adjust the heated steering wheel temperature level

The heated steering wheel can be adjusted in 2 levels. (Low or Hi)

C Adjust the seat ventilator fan

speed level

The seat ventilator can be adjusted in 3 levels. (Low, Mid or Hi)

D AUTO control switch

When the AUTO control is on, the indicator illuminates on the screen. (→P.474)

► Rear

**A** Adjust the seat heater temperature level

The seat heater can be adjusted in 3 levels. (Low, Mid or Hi)

B Adjust the seat ventilator fan speed level

The seat ventilator can be adjusted in 3 levels. (Low, Mid or Hi)

C AUTO control switch

When the AUTO control is on, the indicator illuminates on the screen. (→P.474)

■ Rear control panel (if equipped)**A** Adjust the rear seat heater temperature level

The seat heater can be adjusted in 3 levels. (Low, Mid or Hi)

B Adjust the rear seat ventilator fan speed level

The seat ventilator can be adjusted in 3 levels. (Low, Mid or Hi)

C Indicators**■ The heated steering wheel, seat heaters and seat ventilators can be used when**

The power switch is in ON.

■ Air conditioning system-linked control mode

When the seat ventilator fan speed level is Hi, the seat ventilator fan speed becomes higher according to the fan speed of the air conditioning system.

■ When the air conditioning system is operating in S-FLOW mode

If a passenger is not detected in the passenger seat, the seat ventilator and seat heater of the passenger's seat will be turned off if on. (→P.480)

■ **Change settings for the rear control panel**

The following settings can be changed.

- Reaction time after touching the button.
 - Turn button operation sounds ON/OFF
- 1 Stop the vehicle in a safe place and stop the fuel cell system.
 - 2 Press the power switch 1 time with brake pedal released and switch the mode to ACC. The setting cannot be changed when the power switch is ON.
 - 3 Press $\overset{\text{CH}}{\text{FLD}}$ for 10 seconds or more while pressing the ⏻ button.
 - 4 Release the button after the buzzer sounds.
 - 5 Select customizable item

Change the reaction time for button operations:

When $\overset{\text{CH}}{\text{FLD}}$ is pressed it becomes faster, when $\underset{\text{CH}}{\text{FLD}}$ is pressed it becomes slower.

Change the button operation sounds ON/OFF

When $\overset{\text{VOL}}{\text{FLD}}$ is pressed it turns ON, when $\underset{\text{VOL}}{\text{FLD}}$ is pressed it turns OFF.

- 6 When changes are complete, the indicators for the seat heater/seat ventilator turns on as shown in the following table.

Function	Settings	Indicator
Reaction Time	Fast	
	A little fast	
	Normal	
	A little slow	
	Slow	
Operation sounds	ON	
	OFF	

7 Settings are complete with any of the following.

- Operate the ⏻ button and turn OFF the rear control panel.
- Press the power switch.
- Do not operate the power switch for approximately 10 seconds.

■ **Customization**

Some functions can be customized. (→P.692)

WARNING

■ **To prevent overheating and minor burn injuries**

Observe the following precautions when using the seat heaters.

- Do not cover the seat with a blanket or cushion when using the seat heater.
- Do not use seat heater more than necessary.

Interior lights list

Location of the interior lights

- A** Door trim ornament lights* (→P.491)
- B** Rear personal lights (→P.491)
- C** Inside door handle lights* (→P.491)
- D** Front personal lights (→P.491)
- E** Shift lever lights*
- F** Interior lights (→P.491)
- G** Outer foot lights*
- H** Front footwell lights
- I** Instrument panel ornament lights* (→P.491)
- J** Cup holder lights (→P.491)
- K** Rear footwell lights*
- L** Door courtesy lights

*: If equipped

Operating the interior lights

■ **Turning the door position on**

Press the door-linked interior light switch

The lights are turned on and off according to whether the doors are opened/closed.

■ **Turning the lights on/off**

Touch the light

The rear personal lights turn on/off along with the interior lights.

Operating the front personal lights

■ **Turning the lights on/off**

Touch the light

Operating the rear personal lights

■ **Turning the lights on/off**

Press the switch

The rear personal lights turn on/off along with the interior lights.

Changing the illumination color (if equipped)

Using the multimedia display, the color and brightness of the interior lights in the vehicle can be changed.

- Inside door handle lights
- Door trim ornament lights
- Cup holder lights
- Instrument panel ornament lights

1 Select .

492 6-2. Using the interior lights

- 2 Select "Illumination".
- 3 Select the desired color.

■ Illuminated entry system

The lights automatically turn on/off according to the power switch mode, the presence of the electronic key, whether the doors are locked/unlocked, and whether the doors are open/closed.

■ Power saving function (vehicles without Toyota Teammate Advanced Drive)

Under the following situations, unlocking the vehicle with the smart key system may take some time. In addition, the illumination lights may not turn on.

- The electronic key was left within approximately 3.5 m outside the vehicle for more than 20 seconds.

■ To prevent the 12-volt battery from being discharged

If the interior lights remain on when the power switch is turned off, the lights will go off automatically after 20 minutes.

■ When the interior lights or front personal lights do not respond as normal

- When water, dirt, etc., have adhered to the lens surface
- When operated with a wet hand
- When wearing gloves, etc.

■ Automatic illumination of the interior lights

If any of the SRS airbags deploy (inflate) or in the event of a strong rear impact, the interior lights will turn on automatically. The interior lights will turn off automatically after approximately 20 minutes.

The interior lights can be turned off manually. However, in order to help prevent further collisions, it is recommended that they be left on until safety can be ensured. (The interior

lights may not turn on automatically depending on the force of the impact and conditions of the collision.)

■ Using the voice control system (if equipped)

Interior lights can be operated using the voice control system. For details regarding the voice control system, refer to the "MULTIMEDIA OWNER'S MANUAL".

■ Customization

Some functions can be customized. (Customizable features: →P.674)

NOTICE

■ To prevent 12-volt battery discharge

Do not leave the lights on longer than necessary when the fuel cell system is off.

■ Removing light lenses

Never remove the lens for the interior lights and front personal lights. Otherwise, the lights will be damaged. If a lens needs to be removed, contact your Toyota dealer.

List of storage features

Location of the storage features

- A** Auxiliary boxes* (→P.495)
- B** Cup holders (→P.494)
- C** Console box (→P.495)
- D** Glove box (→P.493)

*: If equipped

WARNING

Items that should not be left in the storage spaces

Do not leave glasses, lighters or spray cans in the storage spaces, as this may cause the following when cabin temperature becomes high:

- Glasses may be deformed by heat or cracked if they come into contact with other stored items.

- Lighters or spray cans may explode. If they come into contact with other stored items, the lighter may catch fire or the spray can may release gas, causing a fire hazard.

Glove box

Pull up the lever to open.

- 1 Unlock with the mechanical key
- 2 Lock with the mechanical key

■ **Glove box light**

The glove box light turns on when the tail lights are on.

■ **Trunk opener main switch**

The trunk opener main switch is located in the glove box. (→P.175)

⚠ WARNING

■ **Caution while driving**

Keep the glove box closed. In the event of sudden braking or sudden swerving, an accident may occur due to an occupant being struck by the open glove box or the items stored inside.

Cup holders

- ▶ Front

- ▶ Rear (vehicles without rear seat heater)

Press in and release the button.

- ▶ Rear (vehicles with rear seat heater)

Press in and release the button.

⚠ WARNING

■ **Items unsuitable for the cup holder**

Do not place anything other than cups or beverage cans in the cup holders. Inappropriate items must not be stored in the cup holders even if the lid is closed. Other items may be thrown out of the holders in the event of an accident or sudden braking and cause injury. If possible, cover hot drinks to prevent burns.

■ **When not in use**

Keep the cup holders closed. Injuries may result in the event of an accident or sudden braking.

Console box

Press a button to open the console box.

! WARNING

Caution while driving

Keep the console box closed. Injuries may result in the event of an accident or sudden braking.

it.

! WARNING

Caution while driving

Do not leave the auxiliary box open while driving. Items may fall out and cause death or serious injury in case of an accident or sudden stop.

Items unsuitable for storing (overhead)

Do not store items heavier than 0.4 lb. (0.2 kg). Doing so may cause the auxiliary box to open and the items inside may fall out, resulting in an accident.

Auxiliary boxes

- Overhead (vehicles without electronic sunshade)

Push in and release the auxiliary box.

This box is useful for temporarily storing the small items.

- Rear seat (vehicles with rear seat heater)

Pull the armrest down then push the knob and lift the lid to open

Trunk features

Luggage mats

● Side covers

Lift the side covers and remove it.

► Type A

► Type B

● Luggage mat

1 Pull the strap upwards and lift up the luggage mat.

2 Lift the luggage mat until it engages with the hook.

⚠ NOTICE

■ To prevent damage to the hook for the luggage mat

Do not hang a grocery bag or any other object from the hook.

Warning reflector

► Type A

The warning reflector can be stowed underneath the luggage mat.

► Type B

Using a belt to hold a warning reflector on the luggage mat.

Electronic sunshade*

*: If equipped

Use the overhead switches to operate the electronic sunshade.

Operating the electronic sunshade

1 Open*

2 Close*

*: To stop the electronic sunshade partway, lightly press the either end of the switch.

■ The electronic sunshade can be operated when

The power switch is in ON.

■ Jam protection function for the electronic sunshade

- If an object becomes jammed between the electronic sunshade and the sunshade frame while the electronic sunshade is closing, the electronic sunshade movement is stopped and the electronic sunshade is opened slightly.
- When the jam protection function has operated, even if the "CLOSE" side of the switch is pressed again, the electronic sunshade will not move in the close direction until the reverse opera-

tion has stopped completely.

- The electronic sunshade may operate in reverse if the electronic sunshade is subject to an impact due to the surroundings or the driving conditions.

■ When the electronic sunshade does not close normally

Perform the following initialization procedure.

- 1 Turn the power switch to ON.
- 2 Press and hold the "CLOSE" side of the switch.

It closes until it is near the fully closed position and then stops. After that, it operates in the opening direction then closes to the fully closed position.

If the switch is released at the incorrect time, the procedure will have to be performed again from the beginning.

If the automatic opening and closing function does not work normally even after performing the operations above, have the vehicle inspected by your Toyota dealer.

⚠ WARNING

Observe the following precautions. Failure to do so may result in death or serious injury.

⚠ WARNING**■ Opening and closing the electronic sunshade**

- Check to make sure that all passengers do not have any part of their body in a position where it could be caught when the electronic sunshade is being operated.

- Do not let a child operate the electronic sunshade. Closing the electronic sunshade on someone can cause death or serious injury.
- **Jam protection function**
- Never use any part of your body to intentionally activate the jam protection function.
- The jam protection function may not work if something gets caught just before the electronic sunshade is fully closed. Also, the jam protection function is not designed to operate while the switch is being pressed. Take care so that your fingers, etc., do not get caught.

■ To prevent burns or injuries

Do not touch the area between the underside of the panoramic moon roof and the electronic sunshade. Your hand may get caught and you could injure yourself. Also, if the vehicle is left in direct sunlight for a long time, the underside of the panoramic moon roof could become very hot and could cause burns.

Other interior features**USB Type-C charging ports**

The USB Type-C charging ports are used to supply 3 A of electricity at 5 V to external devices. The USB Type-C charging ports are for charging only. They are not designed for data transfer or other purposes.

Depending on the external device, it may not charge properly. Refer to the manual included with the device before using a USB charging port. Refer to “MULTIMEDIA OWNER’S MANUAL” for USB Type-A information.

■ Using the USB Type-C charging ports

- ▶ In the console box
Open the console box.

- ▶ Rear of the console box
Open the lid.

■ **The USB Type-C charging ports can be used when**

The power switch is in ACC or ON.

■ **Situations in which the USB Type-C charging ports may not operate correctly**

- If a device which consumes more than 3 A at 5 V is connected
- If a device designed to communicate with a personal computer, such as a USB memory device, is connected
- If the connected external device is turned off (depending on device)
- If the temperature inside the vehicle is high, such as after the vehicle has been parked in the sun

■ **About connected external devices**

Depending on the connected external device, charging may occasionally be suspended and then start again. This is not a malfunction.

 NOTICE

■ **To prevent damage to the USB Type-C charging ports**

- Do not insert foreign objects into the ports.
- Do not spill water or other liquids into the ports.

● When the USB Type-C charging ports are not in use, close the lids. If a foreign object or liquid enters a port may cause a short circuit.

● Do not apply excessive force to or impact the USB Type-C charging ports.

● Do not disassemble or modify the USB Type-C charging ports.

■ **To prevent damage to external devices**

● Do not leave external devices in the vehicle. The temperature inside the vehicle may become high, resulting in damage to an external device.

● Do not push down on or apply unnecessary force to an external device or the cable of an external device while it is connected.

■ **To prevent 12-volt battery discharge**

Do not use the USB Type-C charging ports for a long period of time with the fuel cell system stopped.

Wireless charger (if equipped) (Type A)

A portable device can be charged by just placing Qi standard wireless charge compatible portable devices according to the Wireless Power Consortium, such as smartphones and mobile batteries, etc., on the charge area.

This function cannot be used with portable devices that are larger than the charging area.

Also, depending on the portable device, it may not operate as normal. Please read the operation manual for portable devices to be used.

■ The “Qi” logo

The “Qi” logo is a trademark of the Wireless Power Consortium.

■ Name for all parts

- A** Power supply switch
- B** Operation indicator light
- C** Charging tray
- D** Charge area *

*: Compatible portable devices and the wireless charger contain charging coils. The charging coil inside the wireless charger can move within the area around the

center of the charging tray. When the charging coil inside a portable device is detected within the charging area, the charging coil in the wireless charger will move near the other coil and charging will begin. If the charging coil inside the portable device is moved out of the charging area, charging will be stopped automatically. Additionally, if 2 or more portable devices are placed on the charging tray at the same time, each charging coil may not be detected correctly and charging may not be possible.

■ Using the wireless charger

- 1 Press the power supply switch of the wireless charger.

Switches on and off with each press of the power supply switch. When turned on, the operation indicator light (green) comes on.

Even with the fuel cell system off, the on/off state of the power supply switch is memorized.

- 2 Place the charging side of the portable device down.

Place the portable device so that it is centered in the charging area with its charging surface facing the wireless charger.

Depending on the portable device, its charging coil may not be in the center of the device. In this case, place the portable device so that its charging coil is centered in the charging area.

While charging, the operation indicator light (orange) will be illuminated.

If charging does not begin, move the portable device as close to the center of the charging area as possible.

If charging is not performed, the operation indicator light will slowly illuminate in green and orange alternatively and a sound of charging coil operation may be heard repeatedly.

When charging is complete, the operation indicator light (green) comes on.

■ **Recharging function**

- When charging is complete and after a fixed time in the charge suspension state, charging restarts.
- If a portable device is moved significantly within the charging area, the charging coil may disconnect and charging may temporarily be stopped. However, if a charging coil is detected within the charging area, the

charging coil inside the wireless charger will move near the other coil and charging will resume.

■ **Lighting conditions of operation indicator light**

Operation indicator light	Conditions
Turning off	When the Wireless charger power supply is off
Green (comes on)	On Standby (charging possible state) ^{*1}
	When charging is complete ^{*2}
Orange (comes on)	When placing the portable device on the charging area (detecting the portable device)
	Charging

^{*1}: While in standby, charging power is not output. If a metal object is placed on the charging tray in this state, the object will not heat up.

^{*2}: Depending on the portable device, there are cases where the operation indicator light will continue being lit up orange even after the charging is complete.

- When the operation indicator light flashes

When an error occurs, the operation indicator light flashes an orange color. Handle the error based on the following tables.

- Flashing repeatedly once every second (Orange)

Suspected causes	Handling method
Vehicle to charger communication failure.	If the fuel cell system is operating, stop the fuel cell system and then restart it. If the power switch is in ACC, start the fuel cell system.

- Repeatedly flashes 3 times continuously (Orange)

Suspected causes	Handling method
A foreign substance is between the portable device and charge area.	Remove the foreign substance from between portable device and the charge area.
The portable device is out of sync due to the device being shifted from the center of the charge area.	Place the portable device near the center of the charge area. Also, if a case or cover is installed to the portable device, remove it.

- Repeatedly flashes 4 times continuously (Orange)

Suspected causes	Handling method
Temperature rising within the wireless charger.	Stop charging, remove the portable device from the charging tray, and wait for the temperature to decrease before attempting to begin charging again.

■ **The wireless charger can be operated when**

The power switch is in ACC or ON.

■ **Usable portable devices**

- Qi standard wireless charge standard can be used on compatible devices. However, not all Qi standard devices and compatibility are guaranteed.
- Starting with mobile phones and smartphones, it is aimed for low power electrically supplied portable devices of no more than 5W.

■ **Using the smart key system**

During charging, when the smart key system searches for an electronic key, charging may be temporarily suspected.

■ **When covers and accessories are attached to portable devices**

Do not charge in situations where cover and accessories not able to handle Qi are attached to the portable device. Depending on the type of cover (including the certain genuine manufacture parts) and accessory, it may not be possible to charge. When charging is not performed even with the portable device placed on the charge area,

remove the cover and accessories.

■ **While charging, noise enters the AM radio**

Turn off the wireless charger and confirm that the noise has decreased. If the noise decreases, continuously pushing the power supply switch of the wireless charger for 2 seconds, the frequency of the charger can be changed and the noise can be reduced. Also, on that occasion, the operation indicator light will flash orange 2 times.

■ **Important points of the wireless charger**

When charging, the wireless charging device and portable device will get warmer, however this is not a malfunction.

When a portable device gets warm while charging, charging may stop due to the protection function on the portable device side. In this case, when the temperature of the portable device drops significantly, charge again.

■ **Operation sounds**

Operation sounds may be heard when the power switch is pressed to change to ACC or ON, or when a portable device is being detected. This does not indicate a malfunction.

■ **Certification**

→P.752

 **WARNING**

■ **Caution while driving**

When charging a portable device, for safety reasons, the driver should not operate the main part of the portable device while driving.

■ **Precautions for when driving**

Do not charge small, lightweight portable devices, such as wireless earbuds, while driving. Lightweight devices may fly off of the charging tray, possibly leading to an accident.

■ **Caution regarding interference with electronic devices**

People with implantable cardiac pacemakers, cardiac resynchronization therapy-pacemakers or implantable cardioverter defibrillators, as well as any other electrical medical device, should consult their physician about the usage of the wireless charger. The operations of the wireless charger may have an affect on medical devices.

■ **To prevent damage or burns**

Observe the following precautions. Failure to do so may result in a possibility of equipment failure and damage, catch fire, burns due to overheat.

- Do not insert any metallic objects between the charging area and the portable device while charging
- Do not place containers with liquid such as water on the wireless charger.
- Do not attach stickers, metallic objects, etc., to the charger area or portable device
- Do not hit or apply a strong force
- Do not attempt to dismantle for disassembly or modifications
- Do not charge portable devices other than designated

⚠ WARNING

- Do not allow magnetic objects to come near the wireless charger
- Do not perform charging if the charging area is dirty
- Do not cover with cloth, etc., and charge

⚠ NOTICE

■ Conditions in which the function may not operate correctly

In the following conditions, it may not operate correctly

- The portable device is fully charged
- When a portable device is being charged by a wired connection
- There is foreign matter between the charge area and portable device
- When the temperature near the charging tray is 95°F (35°C) or more due to being in direct sunlight, etc.
- The temperature of the portable device gets higher from charging
- The charging surface of the portable device is facing up
- When a portable device is larger than the charging tray
- The small portable device such as foldable type is placed in an area misaligned from the charge area
- The camera lens protrudes 0.12 in. (3 mm) or more from the surface of the portable device

- Near a TV tower, electric power plant, gas station, radio station, large display, airport or other facility that generates strong radio waves or electrical noise
- The electronic key is not inside the vehicle
- When any of the following objects are caught between the device and charging surface, resulting in a gap of 0.08 in. (2 mm) or more between the charging surface of a portable device and the charging area:
 - Thick cases or covers
 - Thick decorations
 - A case or cover with convex shape around the camera lens
 - Accessories, such as finger rings, straps, etc.
- When the portable device is in contact with, or is covered by the following metallic objects
 - Cards to which aluminum foil is attached
 - Cigarette boxes that have aluminum foil inside
 - Metallic wallets or bags
 - Coins
 - Hand warmers made of metal
 - Media such as CDs and DVDs
 - Metallic decorations
 - Metallic cases or covers
 - A case which has magnet in it on the charging side of the portable device
- When other wireless keys (that emit radio waves) are being used nearby

NOTICE

- When 2 or more portable devices are placed on the charging tray at the same time
In addition, excluding the above-mentioned, when the charger does not perform normally or the operation display lamp is flashing continuously, it is considered that the wireless charger is malfunctioning. Contact authorized Toyota dealer.
- **To prevent failure or damage to data**
- Do not bring magnetic cards, such as credit cards, or magnetic recording media, etc., close to the charger while charging, otherwise, data may disappear under the influence of magnetism. Also, do not bring precision instruments such as wrist watches, etc., close to the charger, as such objects may break.
- Do not perform charging with a contactless smart card, such as a credit card, between the charging surface of a portable device and the charging area. The IC chip in the card may become extremely hot, possibly damaging the portable device or smart card.
Be extra careful to not charge a portable device with a case or cover which a contactless smart card can be inserted.
- Do not leave portable devices in the cabin. The temperature inside the cabin may become high, when under the sun, and cause damage to the device.

■ **To prevent 12-volt battery discharge**

When the fuel cell system is stopped, do not use the wireless charger for a long time.

Wireless charger (if equipped) (Type B)

A portable device can be charged by just placing Qi standard wireless charge compatible portable devices according to the Wireless Power Consortium, such as smartphones and mobile batteries, etc., on the charge area.

The compatible portable devices can be found on the following Wireless Power Consortium website.

<https://www.wirelesspowerconsortium.com/>

This function cannot be used with portable devices that cannot be placed on the wireless charger. Also, depending on the portable device, it may not operate as normal. Please read the operation manual for portable devices to be used.

■ **The “Qi” logo**

The “Qi” logo is a trademark of the Wireless Power Consortium.

■ Name for all parts

- A** Operation indicator light
- B** Charge area *
- C** Charging tray
- D** Approximately 3.9 in. (10 cm)
- E** Approximately 1.0 in. (2.5 cm)

*: Portable devices and wireless chargers contain charging coils. The charging coil in the wireless charger can be moved within the charge area up to the position of the charging coil inside a portable device. Charging is possible if the center of the coil of the portable device is placed within the charge area. If 2 or more portable devices are placed on the wireless charger, their charging coils

may not be properly detected and they may not be charged.

■ Using the wireless charger

Place the portable device on the wireless charger.

Place the charging side of the portable device against the wireless charger with the center of the device in the center of the wireless charger. When charging, the operation indicator light (orange) on the wireless charger comes on. If charging is not occurring, refer to “Situations in which the function may not operate normally” (→P.512). When charging is complete, the operation indicator light (green) on the wireless charger comes on.

■ Recharging function

- When charging is complete and after a fixed time in the charge suspension state, charging restarts.
- When a portable device is moved significantly in the charge area, the charging coil is disconnected and charging is stopped momentarily. However, if there is a charging coil in the charge area, the charging coil inside the wire-

less charger will move toward it and then charging restarts. If the portable device is moved to somewhere outside of the charge area, charging will stop. Place the portable device near the center of the charge area.

■ **Rapid charging function**

- The following portable devices support rapid charging.
- Portable devices compliant with

- WPC Ver.1.3.2 and compatible with rapid charging
- iPhone's with an iOS version that supports 7.5 W charging (iPhone 8 and later models)
- Portable devices compatible with Galaxy original rapid charging standard
- When a portable device that supports rapid charging is charged, charging automatically switches to the rapid charging function.

■ **Lighting conditions of operation indicator light**

Operation indicator light		Conditions
Wireless charger side	Multimedia Display side	
Green (comes on)	Gray	On Standby (charging possible state) ^{*1}
		When charging is complete ^{*2}
Orange (comes on)	Blue	Charging

^{*1}: Charging power will not be output during standby. A metallic object will not be heated, if it is placed on the wireless charger in this state.

^{*2}: Depending on the portable device, there are cases where the operation indicator light will continue being lit up orange even after the charging is complete.

■ **When the wireless charger does not operate properly**

When the wireless charger does not operate properly, handle the probable cause based on the following tables.

Operation indicator light		Suspected causes/Handling method
Wireless charger side	Multimedia Display side	
Orange (Flashing repeatedly once every second)	Gray	Vehicle to wireless charger communication failure → If the fuel cell system is operating, stop and then restart the fuel cell system. If the power switch is in ACC, start the fuel cell system. (→P.219)
Green (Flashing repeatedly once every second)	Disappear	Wireless charger and multimedia system communication failure → If the fuel cell system is operating, stop and then restart the fuel cell system. If the power switch is in ACC, start the fuel cell system. (→P.219)
Green (comes on)	Blue	AM radio stations are being automatically selected → Wait until the system has completed the automatic selection of AM radio stations. In the case that automatic selection cannot be completed, stop automatic selection.
		The smart key system is detecting the electronic key. → Wait until electronic key detection has completed.

Operation indicator light		Suspected causes/Handling method
Wireless charger side	Multimedia Display side	
Green (comes on)	Gray	<p>Foreign substance detection: The abnormal heating prevention function for foreign substances operated due to the presence of a metallic foreign substance in the charge area → Remove the foreign substance from the charge area.</p>
		<p>Portable device misaligned/distanced from charging surface: The center of charging coil in the portable device moved outside of the charging area, or lens convex is large, or case is thick so the abnormal heating prevention function operated → Remove the portable device from the wireless charger, after 5 seconds, then place the portable device so that it is near the center of the wireless charger. Also, if a case or cover is installed to the portable device, remove it.</p>
		<p>Battery protection function of portable device: Before full charging, battery protection function of portable device operated → Confirm the setting of portable device.</p>
		<p>Continued detection of an electronic key: When a Multimedia function is used through vehicle customization, the electronic key is continually detected without being confirmed → In this case, turn the power switch in ACC or ON to confirm the key.</p>

Operation indicator light		Suspected causes/Handling method
Wireless charger side	Multimedia Display side	
Orange (Repeatedly flashes 4 times continuously)	Gray	Safety shutdown resulting when the temperature within the wireless charger exceeded the set value → Stop charging, remove the portable device from the wireless charger, wait for the temperature to drop, and then start charging again.

■ **The wireless charger can be operated when**

The power switch is in ACC or ON.

■ **Usable portable devices**

- Qi standard wireless charge standard can be used on compatible devices. However, compatibility with portable devices that comply with Qi Ver. 1.0, 1.3.2 and later versions is not guaranteed.
- Starting with mobile phones and smartphones, it is aimed for low power electrically supplied portable devices of no more than 5W.
- However, charging exceeding 5 W is supported by the following portable devices.
 - Charging at 10 W or less is supported by Galaxy device that support 10 W charging of original standard.
 - Charging at 7.5 W or less is supported by iPhone's that support 7.5 W charging.
 - Charging at 15 W or less is supported by portable devices compliant with EPP output as defined by WPC standard Ver.1.3.2.

■ **Using the smart key system**

Charging will be suspended for the smart key system to detect the electronic key during charging such as when the electronic key has been brought outside the vehicle. When the electronic key is detected,

charging will automatically start again.

■ **When covers and accessories are attached to portable devices**

Do not charge in situations where cover and accessories not able to handle Qi are attached to the portable device. Depending on the type of cover (including for certain genuine manufacturer parts) and accessory, it may not be possible to charge. When charging is not performed even with the portable device placed on the charge area, remove the cover and accessories.

■ **Operation when AM radio is being received**

- During charging, if noise occurs when listening to the AM radio, the charging frequency is automatically changed to reduce the noise.
- Rapid charging may not be performed as AM radio reception is prioritized during rapid charging.
- When automatically seeking AM radio stations, charging will be suspended to prevent charging noise from being detected as a radio station. Charging will resume automatically when seek tuning is stopped.

■ **Important points of the wireless charger**

- If the electronic key cannot be detected within the vehicle inte-

rior, charging cannot be done. When the door is opened and closed, charging may be temporarily suspended.

- When charging, the wireless charging device and portable device will get warmer, however this is not a malfunction. When a portable device gets warm while charging, charging may stop due to the protection function on the portable device side. In this case, when the temperature of the portable device drops significantly, charge again.

The fan may start operating to lower the temperature inside the wireless charger, however this is not a malfunction.

■ Operation sounds

A buzzing noise may be heard when pressing the power switch to turn to ACC or ON or when detecting a portable device. However, this is not a malfunction.

■ Cleaning the wireless charger

→P.540

■ Situations in which the function may not operate normally

Devices may not be charged normally in the following situations.

- The portable device is fully charged
- The portable device is being charged with a cable connected
- There is foreign matter between the charge area and portable device
- Charging has caused the portable device to heat up
- The temperature around the wireless charger is 95°F (35°C) or higher, such as in extreme heat
- The portable device is placed with its charging side away from the wireless charger
- The small portable device such as foldable type is placed in an area misaligned from the charge area
- The portable device is larger than the charging tray
- The vehicle is in an area where strong electrical waves or noise are emitted, such as near a television tower, power plant, gasoline station, broadcasting station, large display, airport, etc.
- The electronic key is not inside the vehicle
- Any of the following objects is stuck or installed between the charging side of the portable device and the charge area.
 - Thick cases or covers
 - A case or cover attached with an uneven or tilted surface, so that the charging side is not flat
 - Thick decorations
 - Accessories, such as finger rings, straps, etc.
- When there is a gap between the charging side of the portable device and the charge area due to a protrusion such as a camera on the charging side of the portable device.
- When the portable device is in contact with, or is covered by any of the following metallic objects:
 - A card that has metal on it, such as aluminum foil, etc.
 - A pack of cigarettes that includes aluminum foil
 - A wallet or bag that is made of metal
 - Coins
 - A heating pad
 - CDs, DVDs or other media
 - A metal accessory
 - A case or cover made of metal
 - A flip type case with a magnet on the charging side of the portable device
- Electric wave type wireless remote controls are being used nearby
- 2 or more portable devices are placed on the wireless charger at the same time

- If you use a device with a built-in S-Pen (Galaxy Note series, etc.) and the device with the S-Pen inserted is on the tray.

If charging is abnormal or the operation indicator light continues to flash for any other reason, the wireless charger may be malfunctioning.

Contact your Toyota dealer.

■ If the smartphone OS has been updated

If the smartphone OS has been updated to a newer version, its charging specifications may have changed significantly. For details, check the information on the manufacturer's website.

■ Trademark information

iPhone is a trademark of Apple Inc., registered in the U.S.A. and other countries.

Galaxy is a trademark or registered trademark of Samsung Electronics Co.,Ltd.

■ Certification

→P.752

WARNING

■ Caution while driving

When charging a portable device, for safety reasons, the driver should not operate the main part of the portable device while driving.

■ Precautions for when driving

Do not charge small, lightweight portable devices, such as wireless earbuds, while driving. Lightweight devices may fly off of the charging tray, possibly leading to an accident.

■ Caution regarding interference with electronic devices

People with implantable cardiac pacemakers, cardiac resynchronization therapy-pacemakers or implantable cardioverters, as well as any other electrical medical device, should consult their physician about the usage of the wireless charger.

■ To prevent malfunctions or burns

Observe the following precautions.

Failure to do so may result in a equipment failure and damage, catch fire, burns due to overheat or electric shock.

- Do not insert any metallic objects between the charge area and the portable device while charging
- Do not store items on the wireless charger instead of in an auxiliary box
- Do not perform charging if the charging area is dirty
- Do not attach an aluminum sticker or other metallic object to the charge area
- Do not attach an aluminum sticker or other metallic object to the side of the portable device (or to its case or cover) that touches the charge area
- Do not subject to a strong force or impact
- Do not disassemble, modify or remove
- Do not charge devices other than specified portable devices
- Keep away from magnetic items
- Do not cover with a cloth or similar material

 NOTICE

■ **To prevent malfunctions and data corruptions**

- When charging, bringing a credit, or other magnetic card, or magnetic storage media close to the charge area may clear any stored data due to magnetic influence. Also, do not bring a wristwatch or other precision instrument close to the charge area since doing so may cause it to malfunction.
- Do not charge with a non-contact IC card such as a transportation system IC card inserted between the charging side of a portable device and the charge area. The IC chip may become extremely hot and damage the portable device or IC card. Be especially careful not to charge a portable device inside a case or cover with a non-contact IC card attached.
- Do not leave portable devices inside the vehicle. The inside of the vehicle can become hot in extreme heat, which could cause a malfunction.

■ **To prevent 12-volt battery discharge**

Do not use the wireless charger for a long period of time when the fuel cell system is stopped.

Armrest

Pull the armrest down for use.

 NOTICE

■ **To prevent damage to the armrest**

Do not place too much strain on the armrest.

Assist grips

An assist grip installed on the ceiling can be used to support your body while sitting on the seat.

 WARNING

■ **Assist grip**

Do not use the assist grip when getting in or out of the vehicle or rising from your seat. Doing so could damage the assist grip, or could cause you to injure yourself by falling over.

 **NOTICE**

■ **To prevent damage to the assist grip**

Do not hang any heavy object or put a heavy load on the assist grip.

Coat hooks

 **WARNING**

■ **Items that must not be hung on the hook**

Do not hang a coat hanger or other hard or sharp object on the hook. If the SRS curtain shield airbags deploy, these items may become projectiles that cause death or serious injury.

■ **The power outlet can be used when**

The power switch is in ACC or ON.

■ **When stopping the fuel cell system**

Disconnect electrical devices with charging functions, such as mobile battery packs. If such devices are left connected, the fuel cell system may not stop normally.

Power outlet (12 VDC)

The power outlet can be used for 12 V accessories that run on less than 10 A.

Open the console box and open the lid.

 **NOTICE**

■ **To avoid damaging the power outlet**

Close the power outlet lid when the power outlet is not in use. Foreign objects or liquids that enter the power outlet may cause a short circuit.

■ **To prevent the fuse from being blown**

Do not use an accessory that uses more than 12 V 10 A.

 NOTICE

■ **To prevent incorrect operation of the vehicle**

When turning the power switch off, make sure to disconnect accessories designed for charging, such as portable chargers, power banks, etc., from the power outlet.

If such an accessory is left connected, the following may occur:

- The doors cannot be locked using the smart key system or wireless remote control.
- The opening screen will be displayed on the multi-information display.
- The interior lights, instrument panel lights, etc., will illuminate.

■ **To prevent 12-volt battery discharge**

Do not use the power outlet longer than necessary when the fuel cell system is off.

Power outlet (120 VAC/100W) (if equipped)

The power outlet can be used for 120 V accessories that run on less than 100 W.

- ▶ Rear of the console box
- Open the lid.

- ▶ In the trunk

Open the lid.

■ **The power outlet can be used when**

The power switch is in ACC or ON.

■ **When stopping the fuel cell system**

Disconnect electrical devices with charging functions, such as mobile battery packs.

If such devices are left connected, the fuel cell system may not stop normally.

 NOTICE

■ **To avoid damaging the power outlet**

Close the power outlet lid when the power outlet is not in use. Foreign objects or liquids that enter the power outlet may cause a short circuit.

■ **To prevent the fuse from being blown**

Do not use an accessory that uses more than 120 V 100 W.

**NOTICE****■ To prevent incorrect operation of the vehicle**

When turning the power switch off, make sure to disconnect accessories designed for charging, such as portable chargers, power banks, etc., from the power outlet.

If such an accessory is left connected, the following may occur:

- The doors cannot be locked using the smart key system or wireless remote control.
- The opening screen will be displayed on the multi-information display.
- The interior lights, instrument panel lights, etc., will illuminate.

■ To prevent 12-volt battery discharge

Do not use the power outlet longer than necessary when the fuel cell system is off.

Power outlets (120 VAC/1500W) (if equipped)

This system allows the use of electrical devices with a total power consumption of 1500W at 120 VAC in the vehicle. Supplying power to electrical devices outside the vehicle is not recommended, as it may violate the laws and regulations of the country or region where it is used. When supplying power to electrical devices outside the vehicle, check the laws and regulations with the relevant local government of each country or

region in advance. Also, be careful not to drag electrical devices and cords when moving the vehicle.

Precautions for using the power outlet while parked

Observe the following precautions before starting the power supply:

- Park the vehicle in a well-ventilated area, avoiding locations with poor ventilation such as garages, as the fuel cell system may start while the system is operating.
- Park the vehicle on a solid and level place.

Block the wheels as needed.

- Check that the hood is closed.
- Check that the fuel door is closed.
- Check that the parking brake is engaged.
- Check that the shift position is in P.
- Check that the power switch is off.
- Note that the alarm system cannot be enabled during the power supply. For theft prevention, do not leave valuable items, etc. in the cabin or luggage compartment.

Names of parts

- A** AC 120 V switch
- B** Power switch (→P.219)
- C** Power outlet (rear console)

- D** Power outlet (luggage compartment)

Using the power outlet (1500 W)

■ **When turning the power outlet on**

- 1 Check that the parking brake is engaged, securely depress the brake pedal and press the power switch (→P.219).
- 2 Check that the READY indicator is illuminated, and press the AC 120 V switch.

The power outlet can be used when the indicator on the AC 120 V switch is illuminated.

The power outlet is turned off/on each time the AC 120 V switch is pressed.

- 3 Open the lid, and fully and securely insert the plug of the device into the power outlet. (→P.519)

■ **Stopping the use of the power outlets (1500 W)**

Follow the procedure described below:

- 1 Turn the connected devices off.

- 2 Press the AC 120 V switch to turn the power outlet off.
- 3 Disconnect each plug from the power outlet.
- 4 Close the lid of the power outlet.

Connecting a device

■ When connecting a device

Make sure to read the instruction manual which came with a device and observe warnings on the device.

Before connecting a device to the power outlet, make sure that the device is turned off.

- 1 Open the lid, and fully and securely insert the plug of the device into the power outlet.

Do not leave the plug halfway inserted.

In the following situations, use cable extension, etc. and connect the plug securely to the power outlet:

- When the plug of a device is too large to allow it to be inserted fully and securely into the power outlet.
- When the plug of a device is heavy, possibly causing it to come off the power outlet.

If the device to be used has a ground wire, use a conversion adapter available on the market and connect the ground wire to the ground terminal of the con-

version adapter.

■ Power outlet

- With these power outlet, use devices which operate on 120 VAC and have a combined maximum power consumption of 1500 W or less. If a device is connected and the power consumption is exceeded, a protection circuit may be activated and the power supply function may be stopped.
- Some of the devices that consume a large amount of power, such as an electric grille, may require the exclusive use of the power outlet. When such a device is connected, do not connect other device(s) to the power outlet.
- When multiple devices are connected, depending on the device, a connected device may not operate properly. For such a device, use exclusively the power outlets.
- When a power outlet is being used, depending on the device to be used, the current flow may be high and the initial peak wattage may exceed 1500 W.
- When a power outlet is being used, depending on the device to be used, it may cause interference with TV and radio broadcasts.
- While a power outlet is being used, a cooling fan sound may be heard from near a rear seat. This does not indicate a malfunction.

■ **Devices which may not operate properly**

The following devices may not operate properly even if the combined power consumption is 1500 W or less:

- Devices with high initial peak wattage
- Devices requiring larger amount of power supply than the power consumption specified in its instruction manual
- Measuring devices that process precise data
- Devices that require an extremely stable power supply
- Devices that require a constant power supply from the power outlet, such as a device with a timer.

■ **When the power outlet is used while the vehicle is parked or stopped**

- The doors cannot be locked/unlocked using the smart entry & start system.
- The doors cannot be locked/unlocked using an electronic key. The doors can only be locked/unlocked using a mechanical key.
- When a door is opened/closed, a buzzer may sound or “Key Not Detected Check Key Location” may be displayed on the multi-information display. Check that an electronic key is carried with you.
- When the vehicle’s surroundings become dark while supplying power, the headlights etc. turn on automatically. Refer to P.486 for information about turning off the lights.

 **WARNING**

■ **For safe use**

Observe the following precautions. Failure to do so may lead to an accident, resulting in death or serious injury.

- Do not allow children or other people not used to the operation to perform the power supply by themselves.
- Do not disconnect the plug of a device while your hands are wet or insert a pin or other object into the power outlet. Also, if a liquid or snow is on the power outlet, dry the outlet before using it.
- Do not attempt to modify, disassemble or repair a power outlet. For information on repairs, contact your Toyota dealer.
- Keep the power outlets free of dust and foreign matter. Also, make sure to clean the power outlets periodically.
- Hold the plug body to plug in/out of a power outlet. Do not touch the plug blades. Do not pull on a cord for unplugging, as otherwise the plug or cord may be damaged.
- Stop the use immediately if abnormal heat is observed on a cord or power outlet. To prevent the cord or power outlet from becoming hot, observe the following precautions:

⚠ WARNING

- Do not connect 2 or more multi-point outlet adapters, such as dual adapters.

- When an extension cord reel is used, make sure to draw the whole cord out of the reel.
- If the device to be used has a ground wire, use a conversion adapter available on the market and connect the ground wire to the ground terminal of the conversion adapter.
- If the plug of a device fits loosely in a power outlet, even though it is fully inserted, replace the power outlet. For information on replacement, contact your Toyota dealer.
- **Devices to be connected**
- Make sure to read any instruction manual which came with a device and observe any warnings on the device.
- Do not connect a device to a power outlet if the device is malfunctioning or its plug is damaged.

- Otherwise, the device may be further malfunctioning, especially when the outside temperature is high or low.
- Devices requiring to be installed on a level place may not operate properly.
- Do not use devices, other than waterproof devices, in a place where water, such as rain, is splashed over or where it is humid.
- Do not use a device that has been or likely to have been merged in water or absorbed water within.
- Do not connect a medical device, as depending on the vehicle condition, the power supply function may be temporarily stopped.
- **When the power outlets are used while the vehicle is parked or stopped**
- The outlets are designed to be connected to electric devices, such as lighting devices. Do not use them as a generator that supplies power to a house, etc. Also, when they are to be used on an emergency power supply device for homes, such as an exclusive device having connection to an external power source, or a device whose power supply circuit for external power source is separate from electric wiring of power companies, consult with the manufacturer or a retailer of the device.
- When using a power outlet, make sure to securely engage the parking brake and shift the shift position to P. Otherwise, the vehicle may move, possibly leading to an accident.

⚠ WARNING

- When using a power outlet, do not move away from the vehicle.
- Do not perform charging during weather when lightning may occur. Stop supplying power if lightning is observed during power supply.
- Do not use the power outlets if the vehicle has a vehicle cover installed.
- Do not use a power outlet when the vehicle is parked on a slanted place or a slope. When a power outlet is being used, do not move the vehicle or cause it to be inclined.
- Observe the following precautions when a connected cord is to be brought outside the vehicle:
 - Take due care for not allowing rain to enter. If the power outlet is wet with raindrops, dry them before use.
 - Prevent the cord from being caught in the window or door
 - Allow slack in a connected cord. Do not cause it to be extraordinary tense.

- Do not start off the vehicle by mistake.
- Do not refuel or wash the vehicle when using a power outlet.

- Make sure that the hood is closed.

Do not get near or place luggage near the vicinity of the tailpipe.

Also, do not put your head or hands anywhere inside the fuel cell unit room, as the cooling fan may operate suddenly. Keep hands and clothing (especially a tie, scarf, etc.) away from the fan as they may get caught in a fan.

- Do not stop the vehicle near objects which burn easily.
- Do not use in places where corrosive gases or fluids are generated.
- Do not use in places where ventilation is poor, such as within garages where there are no air supply and exhaust ventilation devices, and places where the vehicle is surrounded (places where snow accumulates, etc.).

■ Use of a power outlet while driving

- In situations such as the following, do not use an electric device while driving. Also, do not use a device if it cannot be secured within the vehicle.
 - When a device is likely to distract the driver and be a hindrance to safe driving, such as a TV, video/DVD player, etc.
 - When an inadequately secured device is likely to fall over in case of sudden braking or an accident
 - When a device is likely to cause fire if it falls or generates heat
 - When a device is likely to cause burns, such as a toaster, microwave, electric heater, electric kettle, coffee maker, etc.

⚠ WARNING

- When a device is likely to fall under the pedals and prevent the brake pedal from being depressed, such as a hair dryer, AC adapter, mouse, etc.
- Do not use devices which produce steam while the windows are closed. Doing so may cause the windows to fog up, reducing visibility and making it difficult to drive safely. Also, the steam may damage or negatively affect other devices. If the device must be used, stop the vehicle and open the windows before use.

■ Using the power outlet while parked or stopped

- Water may leak from the tailpipe while charging. However, this is not a malfunction.

When the power outlet (1500W) cannot be used properly

When power supply does not start, even though the normal procedure is followed, check each of the following items.

⚠ NOTICE

■ To avoid short circuit or malfunction

Observe the following precautions. Failure to do so may lead to the power outlets not operating correctly or damage to the vehicle or a connected device.

- Do not set a toaster or other device which generates heat near the interior components or on a seat. Heat may cause these parts to melt or burn.
- Do not use devices which are sensitive to vibration or heat in the vehicle. These devices may malfunction due to vibration while driving or heat while the vehicle is parked in the sun.
- When not using a power outlet, make sure to close the lid. If foreign matter or a liquid enters the power outlet, it may cause a malfunction or short circuit.

Likely cause	Correction procedure
Quantity of fuel remaining is low and the remaining charge of the traction battery is insufficient	After refueling, drive for a while to restore the remaining charge of the traction battery. Then, press the AC 120 V switch again.
The traction battery becomes hot when the outside temperature is especially high	Move the vehicle to the shade or other cooler location, or use the air conditioning to lower the temperature inside the vehicle. Then, after waiting for a while, press the AC 120 V switch again.

Likely cause	Correction procedure
The traction battery becomes cold when the outside temperature is especially low	Drive for a while or use the air conditioning to raise the temperature inside the vehicle. Then, after waiting for a while, press the AC 120 V switch again.
Electrical device does not operate	Disconnect the power source plug of the electrical device and check that the device is not malfunctioning. Then, press the AC 120 V switch again. Check the instruction manual of the electrical device.

Likely cause	Correction procedure
Total power consumption exceeds 1500 W	Disconnect the power source plug of the electrical device and check that the total power consumption does not exceed 1500 W. Then, press the AC 120 V switch again.
Short circuit in the power outlet	Disconnect the power source plug of the electrical device and check the following items. Then, press the AC 120 V switch again. <ul style="list-style-type: none"> • No foreign matter such as a pin has been inserted • No substances such as drinking water, rain, or snow are adhered • No dirt or dust is adhered

If the power outlet cannot be used even after performing the procedures above, have the vehicle inspected by your Toyota dealer.

Sun visors

- 1** To set the visor in the forward position, flip it down.
- 2** To set the visor in the side position, flip down, unhook, and swing to the side.
- 3** To use the side extender, place the visor in the side position, then slide it backward.

Vanity mirrors

Slide the cover to open.
The vanity light turns on.

To prevent 12-volt battery discharge

If the vanity lights remain on when the power switch is turned off, the lights will go off automatically after 20 minutes.

NOTICE

To prevent the 12-volt battery from being discharged

Do not leave the vanity lights on for extended periods while the fuel cell system is off.

Rear door sunshades (if equipped)

Pull up the tab of the sunshade and hook the shade on using the anchors.

To retract the sunshade, unhook the sunshade and retract it slowly.

NOTICE

To ensure normal operation of the sunshades

Observe the following precautions:

- Do not place anything where it may hinder the opening/closing of the rear door sunshades.
- Do not attach items to the rear door sunshades.
- Do not apply excessive load to the rear door sunshades while they are hanging from the hooks.
- Do not operate the rear door sunshade while the rear door is opening/closing.

 NOTICE

● Do not store the rear door sunshade in a tilted position. If stored in a tilted position, the rear door sunshade screen may become creased.

■ **To prevent damage to the rear door sunshade**

Observe the following precautions:

- Do not use the rear door sunshade when either hook is detached. When the rear door is opened/closed, the rear door sunshade may be damaged.
- Do not pull on the screen while the hooks are attached. The screen may be damaged.

Rear sunshade (if equipped)

The rear sunshade can be extended and retracted using the rear sunshade switch and rear control panel.

■ **From front seat**

Extend/retract

■ **From rear seat**

- 1 Using the rear control panel, press .

2 Select  SHADE *

The rear sunshade will be extended or retracted.

■ **The rear sunshade can be used when**

The power switch is in ON.

■ **Operating the rear sunshade after turning the fuel cell system off**

The rear sunshade can be operated for a while even after the power switch is switched to ACC or turned off.

■ **Reverse operation feature**

To ensure adequate rear visibility, the rear sunshade automatically lowers when the shift position is shifted to R.

However, the rear sunshade is raised again if any of the following occurs:

- The button is pressed again.
- The shift position is shifted to P.
- The shift position is shifted out of P and R, and the vehicle reaches a speed of 9 mph (15 km/h).

If the fuel cell system is turned off when the rear sunshade has been lowered due to the reverse operation feature, it will not be raised even when the fuel cell system is turned on again and the vehicle reaches a speed of 9 mph (15 km/h). To raise the sunshade again, press the button.

⚠ WARNING**■ When the rear sunshade is being extended or retracted**

Do not place fingers or other objects in the shade mechanism or in the opening as injury may result.

⚠ NOTICE**■ To ensure normal operation of the rear sunshade**

Observe the following precautions:

- Do not place excessive load on the motor or other components.
- Do not place objects where they may hinder opening and closing operations.
- Do not attach items to the rear sunshade.
- Keep the opening clean and clear of obstructions.
- Do not operate the rear sunshade continuously for long periods of time.

Garage door opener

The garage door opener can be programmed using the HomeLink® to operate garage doors, gates, entry doors, door locks, home lighting systems, security systems, and other devices.

■ HomeLink® programming procedure

The programming procedures can also be found at the following URL. Website: www.homelink.com/toyota

For support, contact customer support at the following.

Help Line: 1-800-355-3515

System components

The HomeLink® wireless control system in your vehicle has 3 buttons which can be programmed to operate 3 different devices. Refer to the programming methods on the following pages to determine the method which is appropriate for the device.

- ▶ Vehicles with auto anti-glare inside rear view mirror

- A** HomeLink® indicator light
- B** Garage door operation indicators
- C** HomeLink® icon

Illuminates while HomeLink® is operating.

- D** Buttons

- ▶ Vehicles with Digital Rear-view Mirror

- A** HomeLink® logo
- Appears while HomeLink® is operating. When the menu button (→P.186) is pressed, the logo disappears even while the HomeLink® is operating.

- B** Garage door operation indicators

- C** HomeLink® indicator light

Illuminates above each button selected.

- D** Buttons

■ Codes stored in the HomeLink® memory

- The registered codes are not erased even if the 12-volt battery cable is disconnected.
- If learning failed when registering a different code to a HomeLink® button that already has a code registered to it, the already registered code will not be erased.

■ Certification

→P.756

! WARNING

■ When programming a garage door or other remote control device

The garage door or other device may operate, so ensure people and objects are out of danger to prevent potential harm.

■ Conforming to federal safety standards

Do not use the HomeLink® compatible transceiver with any garage door opener or device that lacks safety stop and reverse features as required by federal safety standards.

This includes any garage door that cannot detect an interfering object. A door or device without these features increases the risk of death or serious injury.

■ When operating or programming HomeLink®

Never allow a child to operate or play with the HomeLink® buttons.

Programming the HomeLink®

■ Before programming HomeLink®

- During programming, it is possible that garage doors, gates, or other devices may operate. For this reason, make sure that people and objects are clear of the garage door or other devices to prevent injury or other potential harm.
- It is recommended that a new battery be placed in the remote control transmitter for more accurate programming.
- Garage door opener motors manufactured after 1995 may be equipped with rolling code protection. If this is the case, you may need a stepladder or other sturdy, safe device to reach the “Learn” or “Smart” button on the garage door opener motor.

■ Programming HomeLink®

Steps 1 through 3 must be performed within 60 seconds, otherwise the indicator light will stop flashing and programming will not be successfully completed.

- 1 Press and release the HomeLink® button you want to program and check that the

HomeLink® indicator light flashes (orange).

- 2 Point the remote control transmitter for the device at the rear view mirror, 1 to 3 in. (25 to 75 mm) from the HomeLink® buttons.

Keep the HomeLink® indicator light in view while programming.

- ▶ Vehicles with auto anti-glare inside rear view mirror

- ▶ Vehicles with Digital Rear-view Mirror

- 3 Program a device.

- ▶ Vehicles with auto anti-glare inside rear view mirror

- ▶ Vehicles with Digital Rear-view Mirror

- ▶ Programming a device other than an entry gate (for U.S.A. owners)

Press and hold the remote control transmitter button until the HomeLink® indicator light changes from slowly flashing orange to rapidly flashing green (rolling code) or continuously lit green (fixed code), then release the button.

- ▶ Programming an entry gate (for U.S.A. owners)/Programming a device in the Canadian market

Press and release the remote control transmitter button at 2 second intervals, repeatedly, until the HomeLink® indicator light changes

from slowly flashing (orange) to rapidly flashing (green) (rolling code) or continuously lit (green) (fixed code).

- 4 Test the HomeLink® operation by pressing the newly programmed button and observing the indicator light:

- HomeLink® indicator light illuminates: Programming of a fixed code device has completed. The garage door or other device should operate when a HomeLink® button is pressed and released.

- HomeLink® indicator light flashes rapidly: The garage door opener motor or other device is equipped with a rolling code. To complete programming, firmly press and hold the HomeLink® button for 2 seconds then release it.

- If the garage door or other device does not operate, proceed to “Programming a rolling code system”.

- 5 Repeat the steps above to program another device for any of the remaining HomeLink® buttons.

■ **Programming a rolling code system**

Two or more people may be necessary to complete rolling code programming.

- 1 Locate the “Learn” or “Smart” button on the garage door opener motor in the garage.

This button can usually be found where the hanging antenna wire is attached to the unit. The name and color of the button may vary by manufacturer. Refer to the owner’s manual supplied with the garage door opener motor for details.

- 2 Press and release the “Learn” or “Smart” button.

Perform 3 within 30 seconds after performing 2.

- 3 Press and hold the desired HomeLink® button (inside the vehicle) for 2 seconds and release it. Repeat this sequence (press/hold/release) up to 3 times to complete programming. If the garage door opener motor operates when the

HomeLink® button is pressed, the garage door opener motor recognizes the HomeLink® signal.

- ▶ Vehicles with auto anti-glare inside rear view mirror

- ▶ Vehicles with Digital Rear-view Mirror

- **Enabling 2-way communication with a garage door (only available for compatible devices)**

When enabled, 2-way communication allows you to check the status of the opening and closing of a garage door through indicators in your vehicle.

2-way communication is only available if the garage door opener motor used is a compatible device. (To check device

compatibility, refer to www.homelink.com.)

- 1 Within 5 seconds after programming the garage door opener has been completed, if the garage door opener motor is trained to HomeLink[®], both garage door operation indicators will flash rapidly (green) and the light on the garage door opener motor will blink twice, indicating that 2-way communication is enabled.

If the indicators do not flash, perform 2 and 3 within the first 10 presses of the HomeLink[®] button after programming has been completed.

- 2 Press a programmed HomeLink[®] button to operate a garage door.
- 3 Within 1 minute of pressing the HomeLink[®] button, after the garage door operation has stopped, press the “Learn” or “Smart” button on the garage door opener motor. Within 5 seconds of the establishment of 2-way communication with the garage door opener, both garage door operation indicators in the vehicle will flash rapidly (green) and the light on the garage door opener motor will blink twice, indicating that 2-way communication is enabled.

■ Reprogramming a single HomeLink[®] button

When the following procedure is performed, buttons which already have devices registered to them can be overwritten:

- 1 Press and hold the desired HomeLink[®] button.
- 2 When the HomeLink[®] indicator starts flashing orange, release the HomeLink[®] button and perform “Programming HomeLink[®]” 1 (it takes 20 seconds for the HomeLink[®] indicator to start flashing).

■ Before programming

- Install a new battery in the transmitter.
- The battery side of the transmitter must be pointed away from the HomeLink[®] buttons.

Operating HomeLink[®]

Press the appropriate HomeLink[®] button. The HomeLink[®] indicator light should turn on.

The status of the opening and closing of a garage door is shown by the indicators.

- ▶ Vehicles with auto anti-glare inside rear view mirror

- A** Opening
- B** Closing

- ▶ Vehicles with Digital Rear-view Mirror

- A** Opening
- B** Closing

This function is only available if the garage door opener motor used is a compatible device. (To check device compatibility, refer to www.homelink.com.)

Color	Status
Orange (flashing)	Currently opening/closing

Color	Status
Green	Opening/closing has completed
Red (flashing)	Feedback signals cannot be received

The indicators can operate within approximately 820 ft. (250 m) of the garage door. However, if there are obstructions between the garage door and the vehicle, such as houses and trees, feedback signals from the garage door may not be received.

To recall the previous door operation status, press and release either HomeLink® buttons and or and (vehicles with auto anti-glare inside rear view mirror), and or and (vehicles with Digital Rear-view Mirror), simultaneously. The last recorded status will be displayed for 3 seconds.

Erasing the entire HomeLink® memory (all three codes)

Press and hold the 2 outside buttons for 10 seconds until the HomeLink® indicator light changes from continuously lit (orange) to rapidly flashing

(green).

If you sell your vehicle, be sure to erase the programs stored in the HomeLink® memory.

- ▶ Vehicles with auto anti-glare inside rear view mirror

- ▶ Vehicles with Digital Rear-view Mirror

Cleaning and protecting the vehicle exterior

Perform cleaning in a manner appropriate to each component and its material.

Cleaning instructions

- Working from top to bottom, liberally apply water to the vehicle body, wheel wells and underside of the vehicle to remove any dirt and dust.
- Wash the vehicle body using a sponge or soft cloth, such as a chamois.
- For hard-to-remove marks, use car wash soap and rinse thoroughly with water.
- Wipe away any water.
- Wax the vehicle when the waterproof coating deteriorates.

If water does not bead on a clean surface, apply wax when the vehicle body is cool.

■ Self-restoring coat

The vehicle body has a self-restoring coating that is resistant to small surface scratches caused in a car wash etc.

- The coating lasts for 5 to 8 years from when the vehicle is delivered from the plant.
- The restoration time differs depending on the depth of the scratch and outside temperature.

The restoration time may become shorter when the coating is warmed by applying warm water.

- Deep scratches caused by keys, coins, etc. cannot be restored.
- Do not use wax that contains abrasives.

■ Automatic car washes

- Before washing the vehicle:
 - Fold the mirrors

Start washing from the front of the vehicle. Extend the mirrors before driving.

- Brushes used in automatic car washes may scratch the vehicle surface, parts (wheel, etc.) and harm your vehicle's paint.
- When the shift position needs to be held in N, refer to P.228.

If you need to release the parking brake, turn off the brake hold system, release the parking brake, and set the power switch to ACC while holding the N position. (→P.228)

■ High pressure car washes

- As water may enter the cabin, do not bring the nozzle tip near the gaps around the doors or perimeter of the windows, or spray these areas continuously.
- Turn the power switch off.

■ When using a car wash

If the door handle becomes wet while the electronic key is within the effective range, the door may lock and unlock repeatedly. In that case, follow the following correction procedures to wash the vehicle:

- Place the key in a position 6 ft. (2 m) or more separate from the vehicle while the vehicle is being washed. (Take care to ensure that the key is not stolen.)
- Set the electronic key to battery-saving mode to disable the Smart key system. (→P.177)

■ Wheels and wheel ornaments

- Remove any dirt immediately by using a neutral detergent.
- Wash detergent off with water immediately after use.
- To protect the paint from damage, make sure to observe the following precautions.
 - Do not use acidic, alkaline or abrasive detergent
 - Do not use hard brushes
 - Do not use detergent on the wheels when they are hot, such as after driving or parking in hot weather

■ Brake pads and calipers

Rust may form if the vehicle is parked with wet brake pads or disc rotors, causing them to stick. Before parking the vehicle after it is washed, drive slowly and apply the brakes several times to dry the parts.

■ Bumpers

Do not scrub with abrasive cleaners.

■ Front side windows water-repellent coating

- The following precautions can extend the effectiveness of the water-repellent coating.
 - Remove any dirt, etc. from the front side windows regularly.
 - Do not allow dirt and dust to accumulate on the windows for a long period.
- Clean the windows with a soft, damp cloth as soon as possible.
- Do not use wax or glass cleaners that contain abrasives when cleaning the windows.
 - Do not use any metallic objects to remove condensation build up.

■ Plated portions

If dirt cannot be removed, clean the parts as follows:

- Use a soft cloth dampened with an approximately 5% solution of neutral detergent and water to clean the dirt off.

- Wipe the surface with a dry, soft cloth to remove any remaining moisture.
- To remove oily deposits, use alcohol wet wipes or a similar product.

■ Vehicles with Advanced Drive (if equipped)

As this vehicle is equipped with various sensors, also refer to “Toyota Teammate Advanced Drive OWNER’S MANUAL” at Toyota.com when cleaning the vehicle.

⚠ WARNING**■ When washing the vehicle**

Do not apply water to the inside of the fuel cell unit compartment. Doing so may cause the electrical components, etc. to catch fire.

■ When cleaning the windshield

Set the wiper switch to off. If the wiper switch is in “AUTO”, the wipers may operate unexpectedly in the following situations, and may result in hands being caught or other serious injuries and cause damage to the wiper blades.

A ○ Off

B AUTO

- When the upper part of the windshield where the raindrop sensor is located is touched by hand

⚠ WARNING

- When a wet rag or similar is held close to the raindrop sensor
- If something bumps against the windshield
- If you directly touch the raindrop sensor body or if something bumps into the raindrop sensor

■ Precaution regarding the front bumper

If the paint of the front bumper is chipped or scratched, the Toyota Safety Sense may not function correctly. If this occurs, consult your Toyota dealer.

■ Precaution regarding the front bumper (vehicle with Toyota Teammate Advanced Drive)

If the paint of the front bumper is chipped or scratched, the Toyota Teammate Advanced Drive may not function correctly. If this occurs, consult your Toyota dealer.

■ Precaution regarding the front and rear bumpers

If the paint of the front or rear bumper is chipped or scratched, the following systems may not function correctly. If this occurs, consult your Toyota dealer.

- Toyota Teammate Advanced Drive (If equipped)
- BSM
- RCTA
- PKSB
- Intuitive parking assist
- Toyota Safety Sense

⚠ NOTICE**■ To prevent paint deterioration and corrosion on the body and components (aluminum wheels, etc.)**

- Wash the vehicle immediately in the following cases:
 - After driving near the sea coast
 - After driving on salted roads
 - If coal tar or tree sap is present on the paint surface
 - If dead insects, insect droppings or bird droppings are present on the paint surface
 - After driving in an area contaminated with soot, oily smoke, mine dust, iron powder or chemical substances
 - If the vehicle becomes heavily soiled with dust or mud
 - If liquids such as benzene and gasoline are spilled on the paint surface
- If the paint is chipped or scratched, have it repaired immediately.
- To prevent the wheels from corroding, remove any dirt and store in a place with low humidity when storing the wheels.
- Cleaning the exterior lights**
 - Wash carefully. Do not use organic substances or scrub with a hard brush. This may damage the surfaces of the lights.
 - Do not apply wax to the surfaces of the lights. Wax may cause damage to the lenses.

**NOTICE****■ When washing the car**

Do not remove the vehicle receptacle cap and directly pour water over the vehicle receptacle. If water enters the vehicle receptacle, damage may occur.

■ When using an automatic car wash

Set the wiper switch to the off position.

If the wiper switch is in "AUTO", the wipers may operate and the wiper blades may be damaged.

■ When using a high pressure car wash

- When washing the vehicle, do not spray the camera or its surrounding area directly with a high pressure washer. Shock applied from high pressure water may cause the device to not operate normally.
- Do not spray water directly on the radar sensor which is equipped behind the emblem. Otherwise it may cause the device to be damaged.
- Do not bring the nozzle tip close to boots (rubber or resin manufactured cover), connectors or the following parts. The parts may be damaged if they come into contact with high-pressure water.
 - Fuel cell stack
 - Traction related parts
 - Steering parts
 - Suspension parts
 - Brake parts

- Keep the cleaning nozzle at least 11.9 in. (30 cm) away from the vehicle body. Otherwise resin section, such as moldings and bumpers, may be deformed and damaged.

Also, do not continuously hold the nozzle in the same place.

- Do not spray the lower part of the windshield continuously.

If water enters the air conditioning system intake located near the lower part of the windshield, the air conditioning system may not operate correctly.

- Do not wash the underside of the vehicle using a high pressure car washer.

Cleaning and protecting the vehicle interior

Perform cleaning in a manner appropriate to each component and its material.

Protecting the vehicle interior

- Remove dirt and dust using a vacuum cleaner. Wipe dirty surfaces with a cloth dampened with lukewarm water.
- If dirt cannot be removed, wipe it off with a soft cloth dampened with neutral detergent diluted to approximately 1%.
Wring out any excess water from the cloth and thoroughly wipe off remaining traces of detergent and water.

Shampooing the carpets

There are several commercial foaming-type cleaners available. Use a sponge or brush to apply the foam. Rub in overlapping circles. Do not use water. Wipe dirty surfaces and let them dry. Excellent results are obtained by keeping the carpet as dry as possible.

Handling the seat belts

Clean with mild soap and lukewarm water using a cloth or sponge. Also check the belts periodically for excessive wear, fraying or cuts.

When cleaning the carpeted portions of the glove box, console box, etc.

If a strong adhesive tape is used,

there is a possibility that the surface of the carpet could be damaged.

Front side windows with IR protective coating (vehicles with IR protective coating)

The front side windows have IR protective coating. To prevent any damage to the IR protective coating, observe the following:

- If the windows are dirty, gently wipe them with a cloth soaked in water or lukewarm water as soon as possible.
- If the windows are very dirty, do not open and close them repeatedly.

WARNING

Water in the vehicle

- Do not splash or spill liquid in the vehicle, such as on the floor, in the traction battery air vents, and in the trunk. (→P.102)
Doing so may cause the traction battery, electrical components, etc. to malfunction or catch fire.

- Do not get any of the SRS components or wiring in the vehicle interior wet. (→P.38)
An electrical malfunction may cause the airbags to deploy or not function properly, resulting in death or serious injury.

Cleaning the interior (especially instrument panel)

Do not use polish wax or polish cleaner. The instrument panel may reflect off the windshield, obstructing the driver's view and leading to an accident, resulting in death or serious injury.

**NOTICE****■ Cleaning detergents**

- Do not use the following types of detergent, as they may discolor the vehicle interior or cause streaks or damage to painted surfaces:
 - Areas other than the seats and steering wheel: Organic substances such as benzene or gasoline, alkaline or acidic solutions, dye, and bleach
 - Seats: Alkaline or acidic solutions, such as thinner, benzene, and alcohol
 - Steering wheel: Organic substances, such as thinner, and cleaner that contains alcohol
- Do not use polish wax or polish cleaner. The instrument panel's or other interior part's painted surface may be damaged.

■ Preventing damage to leather surfaces

Observe the following precautions to avoid damage to and deterioration of leather surfaces:

- Remove any dust or dirt from leather surfaces immediately.
- Do not expose the vehicle to direct sunlight for extended periods of time. Park the vehicle in the shade, especially during summer.
- Do not place items made of vinyl, plastic, or containing wax on the upholstery, as they may stick to the leather surface if the vehicle interior heats up significantly.

■ Water on the floor

Do not wash the vehicle floor with water.

Vehicle systems such as the audio system may be damaged if water comes into contact with electrical components such as the audio system above or under the floor of the vehicle. Water may also cause the body to rust.

■ When cleaning the inside of the windshield

Do not allow glass cleaner to contact the lens. Also, do not touch the lens. (→P.260)

■ Cleaning the inside of the rear window

- Do not use glass cleaner to clean the rear window, as this may cause damage to the rear window defogger heater wires or antenna. Use a cloth dampened with lukewarm water to gently wipe the window clean. Wipe the window in strokes running parallel to the heater wires or antenna.

- Be careful not to scratch or damage the heater wires or antenna.

■ Cleaning the front side windows

Do not use any compound or abrasive product (e.g., glass cleaner, detergent, wax) to clean the windows. It may damage the coating.

Cleaning the areas with satin-finish metal accents

- Remove dirt using a water-dampened soft cloth or synthetic chamois.
- Wipe the surface with a dry,

soft cloth to remove any remaining moisture.

■ **Cleaning the areas with satin-finish metal accents**

The metal areas use a layer of real metal for the surface. It is necessary to clean them regularly. If dirty areas are left uncleaned for long periods of time, they may be difficult to clean.

■ **Cleaning the leather areas**

- Remove dirt and dust using a vacuum cleaner.
- Wipe off any excess dirt and dust with a soft cloth dampened with diluted detergent.

Use a diluted water solution of approximately 5% neutral wool detergent.

- Wring out any excess water from the cloth and thoroughly wipe off all remaining traces of detergent.
- Wipe the surface with a dry, soft cloth to remove any remaining moisture. Allow the leather to dry in a shaded and ventilated area.

■ **Caring for leather areas**

Toyota recommends cleaning the interior of the vehicle at least twice a year to maintain the quality of the vehicle's interior.

■ **Cleaning the synthetic leather areas**

- Remove dirt and dust using a

vacuum cleaner.

- Wipe it off with a soft cloth dampened with neutral detergent diluted to approximately 1%.
- Wring out any excess water from the cloth and thoroughly wipe off remaining traces of detergent and water.

Maintenance requirements

To ensure safe and economical driving, day-to-day care and regular maintenance are essential. It is the owner's responsibility to perform regular checks. Toyota recommends the maintenance below.

■ Repair and replacement

It is recommended that genuine Toyota parts be used for repairs to ensure performance of each system. If non-Toyota parts are used in replacement or if a repair shop other than a Toyota dealer performs repairs, confirm the warranty coverage.

■ Allow inspection and repairs to be performed by a Toyota dealer

- Toyota technicians are well-trained specialists and are kept up to date with the latest service information. They are well informed about the operation of all systems on your vehicle.
- Keep a copy of the repair order. It proves that the maintenance that has been performed is under warranty coverage. If any problem should arise while your vehicle is under warranty, your Toyota dealer will promptly take care of it.

WARNING

■ If your vehicle is not properly maintained

Improper maintenance could result in serious damage to the vehicle and possible death or serious injury.

■ Handling of the 12-volt battery

- Oils, fuels and fluids contained in vehicles as well as waste produced by component wear contain or emit chemicals known to the State of California to cause cancer and birth defects or other reproductive harm. Avoid exposure and wash any affected area immediately.
- 12-volt battery posts, terminals and related accessories contain lead and lead compounds which are known to cause brain damage. Wash your hands after handling. (→P.556)

General maintenance

General maintenance should be performed on a daily basis. This can be done by yourself or by a Toyota dealer.

Scheduled maintenance

Scheduled maintenance should be performed at specified intervals according to the maintenance schedule.

For details about maintenance items and schedules, refer to the "Scheduled Maintenance Guide" or "Owner's Manual Supplement".

Do-it-yourself maintenance

You can perform some maintenance procedures by yourself. Please be aware that do-it-yourself maintenance may affect

warranty coverage.

The use of Toyota repair manuals is recommended.

For details about warranty coverage, refer to the separate “Owner’s Warranty Information Booklet” or “Owner’s Manual Supplement”.

General maintenance

Listed below are the general maintenance items that should be performed at the intervals specified in the “Owner’s Warranty Information Booklet” or “Owner’s Manual Supplement/Scheduled Maintenance Guide”. It is recommended that any problem you notice should be brought to the attention of your Toyota dealer or qualified service shop for advice.

WARNING

■ If the fuel cell system is operating

Turn the fuel cell system off and ensure that there is adequate ventilation before performing maintenance checks.

Fuel cell unit compartment

Items	Check points
Brake fluid	Is the brake fluid at the correct level? (→P.555)
Coolant	Is the coolant at the correct level? (→P.553)

Items	Check points
Radiator/condenser	The radiator and condenser should be free from foreign objects. (→P.554)
Washer fluid	Is there sufficient washer fluid? (→P.555)

Trunk

Items	Check points
12-volt battery	Check the connections. (→P.556)

Vehicle interior

Items	Check points
Accelerator pedal	<ul style="list-style-type: none"> The accelerator pedal should move smoothly (without uneven pedal effort or catching).
Transmission "Park" mechanism	<ul style="list-style-type: none"> When parked on a slope and the shift position is in P, is the vehicle securely stopped?

Items	Check points
Brake pedal	<ul style="list-style-type: none"> Does the brake pedal move smoothly? Does the brake pedal have appropriate clearance from the floor? Does the brake pedal have the correct amount of free play?
Brakes	<ul style="list-style-type: none"> The vehicle should not pull to one side when the brakes are applied. The brakes should work effectively. The brake pedal should not feel spongy. The brake pedal should not get too close to the floor when the brakes are applied.
Head restraints	<ul style="list-style-type: none"> Do the head restraints move smoothly and lock securely?
Indicators/buzzers	<ul style="list-style-type: none"> Do the indicators and buzzers function properly?
Lights	<ul style="list-style-type: none"> Do all the lights come on?

Items	Check points
Parking brake	<ul style="list-style-type: none"> • Does the parking brake operate normally? • When parked on a slope and the parking brake is on, is the vehicle securely stopped?
Seat belts	<ul style="list-style-type: none"> • Do the seat belts operate smoothly? • The seat belts should not be damaged.
Seats	<ul style="list-style-type: none"> • Do the seat controls operate properly?
Steering wheel	<ul style="list-style-type: none"> • Does the steering wheel rotate smoothly? • Does the steering wheel have the correct amount of free play? • There should not be any strange sounds coming from the steering wheel.

Vehicle exterior

Items	Check points
Doors/trunk	<ul style="list-style-type: none"> • Do the doors/trunk operate smoothly?
Hood	<ul style="list-style-type: none"> • Does the hood lock system work properly?
Fluid leaks	<ul style="list-style-type: none"> • There should not be any signs of fluid leakage after the vehicle has been parked.
Tires	<ul style="list-style-type: none"> • Is the tire inflation pressure correct? • The tires should not be damaged or excessively worn. • Have the tires been rotated according to the maintenance schedule? • The wheel nuts should not be loose.
Windshield wipers	<ul style="list-style-type: none"> • The wiper blades should not show any signs of cracking, splitting, wear, contamination or deformation. • The wiper blades should clear the windshield without streaking or skipping.

Do-it-yourself service precautions

If you perform maintenance by yourself, be sure to follow the correct procedure as given in these sections.

Maintenance

Items	Parts and tools
12-volt battery condition (→P.556)	<ul style="list-style-type: none"> • Grease • Conventional wrench (for terminal clamp bolts)
Brake fluid level (→P.555)	<ul style="list-style-type: none"> • FMVSS No.116 DOT 3 or SAE J1703 brake fluid • FMVSS No.116 DOT 4 or SAE J1704 brake fluid • Rag or paper towel • Funnel (used only for adding brake fluid)

Items	Parts and tools
Inverter coolant level (→P.553)	<ul style="list-style-type: none"> • “Toyota Super Long Life Coolant” or a similar high quality ethylene glycol-based non-silicate, non-amine, non-nitrite and non-borate coolant with long-life hybrid organic acid technology For the U.S.A.: “Toyota Super Long Life Coolant” is pre-mixed with 50% coolant and 50% deionized water. For Canada: “Toyota Super Long Life Coolant” is pre-mixed with 55% coolant and 45% deionized water. • Funnel (used only for adding coolant)
Fuses (→P.595)	<ul style="list-style-type: none"> • Fuse with same amperage rating as original • Flathead screwdriver
Headlight aim (→P.598)	<ul style="list-style-type: none"> • Phillips-head screwdriver
Radiator and condenser (→P.554)	—

Tire inflation pressure (→P.584)	<ul style="list-style-type: none"> • Tire pressure gauge • Compressed air source
Washer fluid (→P.555)	<ul style="list-style-type: none"> • Water or washer fluid containing antifreeze (for winter use) • Funnel (used only for adding water or washer fluid)

 **WARNING**

The fuel cell unit compartment contains many mechanisms and fluids that may move suddenly, become hot, or become electrically energized. To avoid death or serious injury, observe the following precautions.

■ **When working on the fuel cell unit compartment**

- Be careful not to touch the high-voltage parts or hydrogen-related parts.
- Make sure that the “READY” indicator is off.
- Keep hands, clothing and tools away from the moving fan.
- Be careful not to touch the motor, inverter, radiator, etc. right after driving as they may be hot. Coolant and other fluids may also be hot.
- Do not leave anything that may burn easily, such as paper and rags, in the fuel cell unit compartment.

- Do not smoke, cause sparks or expose an open flame to the 12-volt battery. 12-volt battery fumes are flammable.
- Be extremely cautious when working on the 12-volt battery. It contains poisonous and corrosive sulfuric acid.
- Take care because brake fluid can harm your hands or eyes and damage painted surfaces. If fluid gets on your hands or in your eyes, flush the affected area with clean water immediately. If you still experience discomfort, consult a doctor.

- Never touch, disassemble, remove or replace the high-voltage parts, cables and their connectors. It can cause severe burns or electric shock that may result in death or serious injury.

■ **When working near the electric cooling fan or radiator grille**

Be sure the power switch is off. With the power switch in ON, the electric cooling fan may automatically start to run if the air conditioning is on and/or the coolant temperature is high. (→P.554)

■ **Safety glasses**

Wear safety glasses to prevent flying or falling material, fluid spray, etc. from getting in your eyes.

 **NOTICE**

■ **If you remove the air cleaner filter**

Driving with the air cleaner filter removed may cause excessive motor wear due to dirt in the air.

Hood

Opening the hood

- 1 Pull the hood lock release lever.

The hood will pop up slightly.

- 2 Pull up the auxiliary catch lever and lift the hood.

⚠ WARNING

■ **Pre-driving check**

Check that the hood is fully closed and locked.
If the hood is not locked properly, it may open while the vehicle is in motion and cause an accident, which may result in death or serious injury.

Positioning a floor jack

When using a floor jack, follow the instructions in the manual provided with the jack and perform the operation safely.

When raising your vehicle with a floor jack, position the jack correctly. Improper placement may damage your vehicle or cause injury.

Location of the jack point

■ **Front**

■ Rear

► Type B

- A Front
- B Suspension
- C Hydrogen tanks

⚠ WARNING

■ **When raising your vehicle**

Make sure to observe the following precautions to reduce the possibility of death or serious injury:

- Make sure to set the floor jack properly at the jack point.
- Raising the vehicle with an improperly positioned floor jack will damage the vehicle and may cause the vehicle to fall off the floor jack.
- Do not jack up on the hydrogen tanks nor the rear suspension.

► Type A

Fuel cell unit compartment

Components

- A** Inverter coolant reservoir (→P.554)
- B** Fuel cell stack coolant reservoir (→P.554)
- C** Fuse boxes (→P.595)
- D** Brake fluid reservoir (→P.555)
- E** Washer fluid tank (→P.555)
- F** Inverter coolant radiator (→P.554)
- G** Electric cooling fan
- H** Condenser (→P.554)
- I** Fuel cell stack coolant radiator (→P.554)

■ **12-volt battery**
→P.556

Fuel cell unit compartment cover

■ Removing the fuel cell unit compartment cover

▶ Outside

▶ Front

■ Installing the clips

- 1 Push up center portion **A**
- 2 Insert
- 3 Press

⚠ NOTICE

■ Checking the fuel cell unit compartment cover after installation

Make sure that the cover is securely installed in its original position.

Fuel cell stack cover

■ Removing the fuel cell stack cover

Remove the fuel cell stack cover.

■ **Installing the fuel cell stack cover**

Install the fuel cell stack cover.

- 1 Attach the hooks on the rear side of the fuel cell stack cover.
- 2 Insert the front side of the fuel cell stack cover on the pins.

 **NOTICE**

■ **Checking the fuel cell stack cover after installation**

Make sure that the cover is securely installed in its original position.

Checking the fuel cell stack coolant

The coolant level is satisfactory if it is between the “MAX” and “MIN” lines on the reservoir

when the fuel cell system is cold.

- A Fuel cell stack reservoir cap
- B “MAX” line
- C “MIN” line

If the level is on or below the “MIN” line, add coolant up to the “MAX” line. (→P.652)

 **NOTICE**

■ **Fuel cell stack coolant**

An exclusive coolant for the fuel cell system is filled in the fuel cell stack coolant reservoir. Do not use any substitute. It may damage your vehicle.

Checking the inverter coolant

The coolant level is satisfactory if it is between the “MAX” and “MIN” lines on the reservoir when the fuel cell system is cold.

A Inverter coolant reservoir cap

B “MAX” line

C “MIN” line

If the level is on or below the “MIN” line, add coolant up to the “MAX” line. (→P.652)

■ Inverter coolant selection

Only use “Toyota Super Long Life Coolant” or a similar high quality ethylene glycol based non-silicate, non-amine, non-nitrite, and non-borate coolant with long-life hybrid organic acid technology.

U.S.A.:

“Toyota Super Long Life Coolant” is a mixture of 50% coolant and 50% deionized water. (Minimum temperature: -31°F [-35°C])

Canada:

“Toyota Super Long Life Coolant” is a mixture of 55% coolant and 45% deionized water. (Minimum temperature: -44°F [-42°C])

For more details about coolant, contact your Toyota dealer.

■ If the inverter coolant level drops within a short time of replenishing

Visually check the radiators, hoses, inverter coolant reservoir cap, drain cock and water pump.

If you cannot find a leak, have your Toyota dealer test the cap and check for leaks in the cooling sys-

tem.

⚠ WARNING

■ When the cell system is hot

Do not remove the coolant reservoir caps. (→P.655)

The cooling system may be under pressure and may spray hot coolant if the cap is removed, causing serious injuries, such as burns.

⚠ NOTICE

■ When adding coolant

Coolant is neither plain water nor straight antifreeze. The correct mixture of water and antifreeze must be used to provide proper lubrication, corrosion protection and cooling. Be sure to read the antifreeze or coolant label.

■ If you spill coolant

Be sure to wash it off with water to prevent it from damaging parts or paint.

Checking the radiator and condenser

Check the radiator and condenser and clear away any foreign objects. If either of the above parts is extremely dirty or you are not sure of their condition, have your vehicle inspected by your Toyota dealer.

⚠ WARNING

■ When the fuel cell system is hot

Do not touch the radiator or condenser as they may be hot and cause serious injuries, such as burns.

Checking and adding the brake fluid

■ **Checking fluid level**

The brake fluid level should be between the “MAX” and “MIN” lines on the tank.

- A** Brake fluid reservoir cap
- B** “MAX” line
- C** “MIN” line

■ **Adding fluid**

Make sure to check the fluid type and prepare the necessary item.

- Fluid type

FMVSS No.116 DOT 3 or SAE J1703 brake fluid

FMVSS No.116 DOT 4 or SAE J1704 brake fluid

- Item

Clean funnel

■ **Brake fluid can absorb moisture from the air**

Excess moisture in the brake fluid can cause a dangerous loss of braking efficiency. Use only newly opened brake fluid.

! WARNING

■ **When filling the reservoir**

Take care as brake fluid can harm your hands and eyes and damage painted surfaces.

If fluid gets on your hands or in your eyes, flush the affected area with clean water immediately.

If you still experience discomfort, see a doctor.

! NOTICE

■ **If the fluid level is low or high**

It is normal for the brake fluid level to go down slightly as the brake pads wear out or when the fluid level in the accumulator is high. If the reservoir needs frequent refilling, there may be a serious problem.

Adding the washer fluid

If any washer does not work or the warning message appears on the multi-information display, the washer tank may be empty. Add washer fluid.

⚠ WARNING**■ When adding washer fluid**

Do not add washer fluid when the fuel cell system is hot or operating as washer fluid contains alcohol and may catch fire if spilled on the fuel cell system, etc.

⚠ NOTICE**■ Do not use any fluid other than washer fluid**

Do not use soapy water or anti-freeze instead of washer fluid. Doing so may cause streaking on the vehicle's painted surfaces, as well as damaging the pump leading to problems of the washer fluid not spraying.

■ Diluting washer fluid

Dilute washer fluid with water as necessary. Refer to the freezing temperatures listed on the label of the washer fluid bottle.

12-volt battery**Location**

The 12-volt battery is located in the right-hand side of the trunk.

Remove the luggage mat: →P.496

■ Before recharging

When recharging, the 12-volt battery produces hydrogen gas which is flammable and explosive. Therefore, observe the following precautions before recharging:

- If recharging with the 12-volt battery installed on the vehicle, be sure to disconnect the ground cable.
- Make sure the power switch on the charger is off when connecting and disconnecting the charger cables to the 12-volt battery.

■ After recharging/reconnecting the 12-volt battery

- Unlocking the doors using the smart key system may not be possible immediately after reconnecting the 12-volt battery. If this happens, use the wireless remote control or the mechanical key to lock/unlock the doors.
- Start the fuel cell system with the power switch in ACC. The fuel cell system may not start with the power switch turned off. However, the fuel cell system will operate normally from the second attempt.

- The power switch mode is recorded by the vehicle. If the 12-volt battery is reconnected, the vehicle will return the power switch mode to the status it was in before the 12-volt battery was disconnected. Make sure to turn off the power switch before disconnecting the 12-volt battery. Take extra care when connecting the 12-volt battery if the power switch mode prior to discharge is unknown.
- When the 12-volt battery is reconnected, start the fuel cell system, depress the brake pedal, and confirm that it is possible to shift into each shift position.

If the system will not start even after multiple attempts, contact your Toyota dealer.

WARNING

■ **Chemicals in the 12-volt battery**

The 12-volt battery contains poisonous and corrosive sulfuric acid and may produce hydrogen gas which is flammable and explosive. To reduce the risk of death or serious injury, take the following precautions while working on or near the 12-volt battery:

- Do not cause sparks by touching the 12-volt battery terminals with tools.
- Do not smoke or light a match near the 12-volt battery.
- Avoid contact with eyes, skin and clothes.
- Never inhale or swallow electrolyte.
- Wear protective safety glasses when working near the 12-volt battery.

- Keep children away from the 12-volt battery.

■ **Where to safely charge the 12-volt battery**

Always charge the 12-volt battery in an open area. Do not charge the 12-volt battery in a garage or closed room where there is insufficient ventilation.

■ **Emergency measures regarding electrolyte**

- If electrolyte gets in your eyes
Flush your eyes with clean water for at least 15 minutes and get immediate medical attention. If possible, continue to apply water with a sponge or cloth while traveling to the nearest medical facility.
- If electrolyte gets on your skin
Wash the affected area thoroughly. If you feel pain or burning, get medical attention immediately.
- If electrolyte gets on your clothes
It can soak through clothing on to your skin. Immediately take off the clothing and follow the procedure above if necessary.
- If you accidentally swallow electrolyte
Drink a large quantity of water or milk. Get emergency medical attention immediately.

■ **When replacing the 12-volt battery**

Use a 12-volt battery designed for this vehicle. Failure to do so may cause gas (hydrogen) to enter the passenger compartment, causing a fire or explosion.

For replacement of the 12-volt battery, contact your Toyota dealer.

 NOTICE

■ **When recharging the 12-volt battery**

Never recharge the 12-volt battery while the fuel cell system is operating. Also, be sure all accessories are turned off.

Exterior

Make sure that the 12-volt battery terminals are not corroded and that there are no loose connections, cracks, or loose clamps.

- A** Terminals
- B** Hold-down clamp

Checking the 12-volt battery condition

Check the 12-volt battery condition by indicator color.

- A** Blue: Good condition
- B** Red: Charging is necessary. Have the vehicle inspected by your Toyota dealer.
- C** Clear: Replacement is necessary. Have the 12-volt battery checked by your Toyota dealer.

Tires (Vehicles without Toyota Teammate Advanced Drive)

Replace or rotate tires in accordance with maintenance schedules and treadwear.

Checking tires

Check if the treadwear indicators are showing on the tires. Also check the tires for uneven wear, such as excessive wear on one side of the tread.

- A New tread
- B Worn tread
- C Treadwear indicator

The location of treadwear indicators is shown by a "TWI" or "△" mark,

etc., molded into the sidewall of each tire.

Replace the tires if the treadwear indicators are showing on a tire.

When to replace your vehicle's tires

Tires should be replaced if:

- The treadwear indicators are showing on a tire.
- You have tire damage such as cuts, splits, cracks deep enough to expose the fabric, and bulges indicating internal damage
- A tire goes flat repeatedly or cannot be properly repaired due to the size or location of a cut or other damage

If you are not sure, consult with your Toyota dealer.

Tire life

Any tire over 6 years old must be checked by a qualified technician even if it has seldom or never been used or damage is not obvious.

Maximum load of tire

Check that the maximum load of the replacement tire is greater than 1/2 of the Gross Axle Weight Ratings (GAWR) of either the front axle or the rear axle, whichever is greater.

For the GAWR, see the Certification Label.

For the maximum load of the tire, see the load limit at maximum cold tire inflation pressure mentioned on the sidewall of the tire. (→P.664)

■ Tire types**● Summer tires**

Summer tires are high-speed performance tires best suited to highway driving under dry conditions. Since summer tires do not have the same traction performance as snow tires, summer tires are inadequate for driving on snow-covered or icy roads. For driving on snow-covered roads or icy roads, the use of snow tires is recommended. When installing snow tires, be sure to replace all four tires.

● All season tires

All season tires are designed to provide better traction in snow and to be adequate for driving in most winter conditions as well as for use year-round. All season tires, however, do not have adequate traction performance compared with snow tires in heavy or loose snow. Also, all season tires fall short in acceleration and handling performance compared with summer tires in highway driving.

● Snow tires

For driving on snow-covered roads or icy roads, we recommend using snow tires. If you need snow tires, select tires of the same size, construction and load capacity as the originally installed tires. Since your vehicle has radial tires as original equipment, make sure your snow tires also have radial construction. Do not install studded tires without first checking local regulations for possible restrictions. Snow tires should be installed on all wheels. (→P.470)

■ If the tread on snow tires wears down below 0.16 in. (4 mm)

The effectiveness of the tires as snow tires is lost.

**WARNING****■ When inspecting or replacing tires**

Observe the following precautions to prevent accidents. Failure to do so may cause damage to parts of the drive train as well as dangerous handling characteristics, which may lead to an accident resulting in death or serious injury.

- Do not mix tires of different makes, models or tread patterns. Also, do not mix tires of remarkably different treadwear.
- Do not use tire sizes other than those recommended by Toyota.
- Do not mix differently constructed tires (radial, bias-belted or bias-ply tires).
- Do not mix summer, all season and snow tires.
- Do not use tires that have been used on another vehicle. Do not use tires if you do not know how they were used previously.

 NOTICE**■ Driving on rough roads**

Take particular care when driving on roads with loose surfaces or potholes.

These conditions may cause losses in tire inflation pressure, reducing the cushioning ability of the tires. In addition, driving on rough roads may cause damage to the tires themselves, as well as the vehicle's wheels and body.

Tire rotation

Rotate the tires in the order shown.

**A Front**

To equalize tire wear and extend tire life, Toyota recommends that tire rotation is carried out at the same interval as tire inspection.

Do not fail to initialize the tire pressure warning system after tire rotation.

Tire pressure warning system

Your vehicle is equipped with a tire pressure warning system that uses tire pressure warning valves and transmitters to detect

low tire inflation pressure before serious problems arise.

The tire pressure warning system of this vehicle adopts a 2-type warning system.

- When “Adjust Pressure” is displayed (Normal Warning)

The tire pressure warning light comes on and a buzzer sounds when the tire inflation pressure becomes low due to natural air leakage or outside temperature. (Ways of coping: →P.618)

- When “Immediately Check tire when Safe” is displayed (Emergency Warning)

The tire pressure warning light comes on and a buzzer sounds when the tire inflation pressure becomes low suddenly due to a blowout. (Ways of coping: →P.663)

However, the system may not be able to detect sudden tire ruptures (bursting, etc.).

- The tire pressure detected by the tire pressure warning system can be displayed on the multi-information display. (→P.118)

The illustration used is intended as an example, and may differ from the image that is actually displayed on the multi-information display.

■ Routine tire inflation pressure checks

The tire pressure warning system does not replace routine tire inflation pressure checks. Make sure to check tire inflation pressure as part of your routine of daily vehicle checks.

■ Tire inflation pressure

- It may take a few minutes to display the tire inflation pressure after the power switch is turned to ON. It may also take a few minutes to display the tire inflation pressure after inflation pressure has been adjusted.
- Tire inflation pressure changes with temperature. The displayed values may also be different from the values measured using a tire pressure gauge.

■ Situations in which the tire pressure warning system may not operate properly

- In the following cases, the tire pressure warning system may not operate properly.
 - If non-genuine Toyota wheels are used.
 - A tire has been replaced with a tire that is not an OE (Original Equipment) tire.
 - A tire has been replaced with a tire that is not of the specified size.
 - Tire chains etc. are equipped.
 - If a window tint that affects the radio wave signals is installed.
 - If there is a lot of snow or ice on the vehicle, particularly around the

wheels or wheel housings.

- If the tire inflation pressure is extremely higher than the specified level.
- If wheels without tire pressure warning valves and transmitters are used.
- If the ID code on the tire pressure warning valves and transmitters is not registered in the tire pressure warning computer.
- Performance may be affected in the following situations.
 - Near a TV tower, electric power plant, gas station, radio station, large display, airport or other facility that generates strong radio waves or electrical noise
 - When carrying a portable radio, cellular phone, cordless phone or other wireless communication device

If tire position information is not correctly displayed due to the radio wave conditions, the display may be corrected by changing the location of the vehicle as the radio wave conditions.

- When the vehicle is parked, the time taken for the warning to start or go off could be extended.
- When tire inflation pressure declines rapidly for example when a tire has burst, the warning may not function.

■ Warning performance of the tire pressure warning system

The warning of the tire pressure warning system will change in accordance with driving conditions.

For this reason, the system may give a warning even if the tire pressure does not reach a low enough level, or if the pressure is higher than the pressure that was adjusted to when the system was initialized.

Installing tire pressure warning valves and transmitters

When replacing tires or wheels, tire pressure warning valves and transmitters must also be installed.

When new tire pressure warning valves and transmitters are installed, new ID codes must be registered in the tire pressure warning computer. (→P.568)

When replacing the tires and wheels

If the ID code of the tire pressure warning valve and transmitter is not registered, the tire pressure warning system will not work properly. In this case, after driving for about 20 minutes, the tire pressure warning light blinks for 1 minute and stays on to indicate a system malfunction.

 **NOTICE**

Repairing or replacing tires, wheels, tire pressure warning valves, transmitters and tire valve caps

- When removing or fitting the wheels, tires or the tire pressure warning valves and transmitters, contact your Toyota dealer as the tire pressure warning valves and transmitters may be damaged if not handled correctly.
- Make sure to install the tire valve caps. If the tire valve caps are not installed, water could enter the tire pressure warning valves, corrode the valve, and cause sticking and air leaks.

- When replacing tire valve caps, do not use tire valve caps other than those specified. The cap may become stuck.

To avoid damage to the tire pressure warning valves and transmitters

When a tire is repaired with liquid sealants, the tire pressure warning valve and transmitter may not operate properly. If a liquid sealant is used, contact your Toyota dealer as soon as possible. After use of liquid sealant, make sure to replace the tire pressure warning valve and transmitter when repairing or replacing the tire. (→P.563)

Registration of the position of each wheel after performing a tire rotation

It is necessary to register the position of each wheel after performing a tire rotation.

Wheel position registration can be performed by oneself. Wheel position registration is performed by driving forward with moderate left and right turns. However, depending on the driving conditions and driving environment, registration may take some time to complete.

- 1 Park the vehicle in a safe place, turn the power switch off and wait 15 minutes or more.
- 2 Start the fuel cell system.

The wheel position registration procedure cannot be performed while the vehicle is moving.

- 3 Press and hold **OK** to display the cursor on the content display area (center) of the multi-information display.
- 4 Press **^/∨** of the meter control switches to select  and then press **OK**.
- 5 Press **</>** of the meter control switches, select "Vehicle Settings", and then press and hold **OK**.
- 6 Press **</>** of the meter control switches, select "TPWS setting" and then press **OK**.
- 7 Press **</>** of the meter control switches to select "Tire Rotation", then press **OK**.
- 8 Press **</>** of the meter control switches and select "Yes", and then press **OK**.

A message indicating that wheel position registration is being performed will be displayed on the multi-information display. "---" will be displayed for the tire inflation pressure of each tire and wheel position registration will begin.

- 9 Drive straight (with occasional left and right turns) at approximately 40 km/h or

more for approximately 10 to 30 minutes.

When wheel position registration is complete, a message indicating that registration has been completed and the inflation pressure of each tire will be displayed on the multi-information display.

Even if it is not possible to drive continuously at approximately 40 km/h or more, registration can be completed by driving for a long time. However, if registration does not complete after driving for 1 hour or more, park the vehicle in a safe place and leave it with the power switch in ON for approximately 15 minutes or more, and then perform the driving procedure again.

■ When performing wheel position registration

- Normally, wheel position registration can be completed within approximately 30 minutes.
- Wheel position registration is performed while driving at a vehicle speed of approximately 40 km/h or more.

■ Wheel position registration procedure

- If the power switch is turned off while registering the wheel position, the next time the power switch is turned to ON, the wheel position registration will resume and it will not be necessary to restart the procedure.
- While the position of each wheel is being determined and the inflation pressures are not being displayed, if the inflation pressure of a tire drops, the tire pressure warning light will come on.

■ If the wheel position cannot be registered easily

- In the following situations, wheel position registration may take longer than usual to be completed or

- may not be possible.
- Vehicle is not driven at approximately 40 km/h or more
 - Vehicle is driven on unpaved roads
 - If wheel position registration does not complete after driving for 1 hour or more, park the vehicle in a safe place for approximately 15 minutes and then drive the vehicle again.
 - If the vehicle is reversed during wheel position registration, all data collected until then will be cleared. Perform driving again.

Setting the tire pressure

In the following situations, it will be necessary to perform the tire inflation pressure setting procedure of the tire pressure warning system.

- When the specified tire inflation pressure has changed, such as due to carried load, etc.
- When the tire inflation pressure is changed such as when the tire size is changed.

If the tire inflation pressure has been adjusted to the specified level, perform the tire inflation setting procedure by selecting specified inflation pressure on the multi-information display.

When the tire inflation pressure is to be other than specified, such as when tires other than the specified size are used, etc., set the tire inflation pressure using the current pressure.

Make sure to adjust the tire inflation pressure of each tire to the appropriate level before performing tire pressure setting.

The tire pressure warning system operates based on this tire inflation pressure.

■ Setting by selecting a specified tire inflation pressure

- 1 Start the fuel cell system.

The tire inflation pressure cannot be set while the vehicle is moving.

- 2 Press and hold OK to display the cursor on the content display area (center) of the multi-information display.
- 3 Press \wedge/\vee of the meter control switches to select  and then press OK.
- 4 Press \langle / \rangle of the meter control switches, select "Vehicle Settings", and then press and hold OK.
- 5 Press \langle / \rangle of the meter control switches, select "TPWS setting" and then press OK.
- 6 Press \langle / \rangle of the meter control switches to select "Tire Pressure Setting", then press OK.

- 7 Press \langle / \rangle of the meter control switches and select “Setting by Specified Pressure”, and then press OK.

Select the desired front and rear tire pressures.

- 8 Press \langle / \rangle of the meter control switches and select “Yes”, and then press OK.

The tire pressure warning light will slowly blink 3 times.

After setting the tire inflation pressure, a message indicating that setting has been completed will be displayed on the multi-information display.

■ **If the tire inflation pressure cannot be set easily**

- If the tire pressure warning light does not blink 3 times when starting the tire inflation pressure setting procedure, the procedure may not have started. Perform the procedure again from the beginning.
- If tire inflation pressure setting procedure cannot be completed after performing the above procedure, contact your Toyota dealer.

■ **Setting using the current tire inflation pressure**

- 1 Adjust the tire inflation pressure of each tire to the appropriate level.

Make sure to adjust the tire inflation pressure with the tires cold.

- 2 Start the fuel cell system.

The tire inflation pressure cannot be set while the vehicle is moving.

- 3 Press and hold OK to display the cursor on the content display area (center) of the multi-information display.

- 4 Press \wedge / \vee of the meter control switches to select  and then press OK.

- 5 Press \langle / \rangle of the meter control switches, select “Vehicle Settings”, and then press and hold OK.

- 6 Press \langle / \rangle of the meter control switches, select “TPWS setting” and then press OK.

- 7 Press \langle / \rangle of the meter control switches to select “Tire Pressure Setting”, then press OK.

- 8 Press \langle / \rangle of the meter control switches to select

“Setting by Current Pressure”

and then press OK .

- 9 Press < / > of the meter control switches and select “Yes”, and then press OK .

The tire pressure warning light will slowly blink 3 times and a message indicating that tire inflation pressure is being set will be displayed on the multi-information display.

After setting the tire inflation pressure, a message indicating that setting has been completed will be displayed on the multi-information display.

■ Warning performance of the tire pressure warning system

- When performing the tire pressure setting using the current tire inflation pressure, the warning timing of the tire pressure warning system will vary according to the conditions under which tire pressure setting was performed. Therefore, a warning may be output even if the tire inflation pressure drops slightly or if the tire inflation pressure increases above that when the tire inflation pressure was set.
- Make sure to perform the tire pressure setting procedure after adjusting the tire inflation pressure. Also, make sure the tires are cold before performing the tire pressure setting procedure or

adjusting the tire inflation pressure.

■ Tire inflation pressure setting procedure

- If the power switch is turned off while setting the tire inflation pressure, the next time the power switch is turned to ON, the setting procedure will resume and it will not be necessary to restart the procedure.
- If the tire inflation pressure setting procedure is started unnecessarily, adjust the tire inflation pressure to the specified level with the tires cold and then perform setting by selecting a specified tire inflation pressure, or perform the tire inflation pressure setting procedure with the current tire inflation pressure.

■ If the tire inflation pressure cannot be set easily

- Normally, the tire inflation pressure setting procedure can be completed in 2 or 3 minutes.
- If the tire pressure warning light does not blink 3 times when starting the tire inflation pressure setting procedure, the procedure may not have started. Perform the procedure again from the beginning.
- If tire inflation pressure setting procedure cannot be completed after performing the above procedure, contact your Toyota dealer.

⚠ WARNING

■ Before performing tire pressure setting

Make sure to adjust the tire inflation pressure of each tire to the appropriate level. Otherwise, the tire pressure warning light may not illuminate even if the tire inflation pressure drops or may illuminate even though the tire inflation pressure is normal.

Registering ID codes

The tire pressure warning valve and transmitter is equipped with a unique ID code.

When new tire pressure warning valves and transmitters are installed, new ID codes must be registered in the tire pressure warning computer.

- ID codes can be registered by yourself, but depending on the driving conditions and driving environment, registration may take some time to complete.
- When using a wheel set which all of the ID codes have already been registered, the wheel set can be changed in a short amount of time.

Before performing ID code registration, make sure that no wheels with tire pressure warning valve and transmitters installed are near the vehicle.

- 1 Park the vehicle in a safe place, turn the power switch off and wait 15 minutes or more.
- 2 Start the fuel cell system.

The ID code registration procedure cannot be performed while the vehicle is moving.

- 3 Press and hold **OK** to display the cursor on the content display area (center) of the multi-information display.

- 4 Press **^/∨** of the meter control switches to select  and then press **OK**.
- 5 Press **</>** of the meter control switches, select "Vehicle Settings", and then press and hold **OK**.
- 6 Press **</>** of the meter control switches, select "TPWS setting" and then press **OK**.
- 7 Press **</>** of the meter control switches to select "Tire Set Switching", then press **OK**.
- 8 Press **</>** of the meter control switches and select "Register New Valve / ID", then press **OK**.
- 9 Press **</>** of the meter control switches to select "Tire Set 1" or "Tire Set 2", then press **OK**.

If ID codes have already been registered for that wheel set, the tire pressure warning light will slowly blink 3 times, and a message indicating that change is occurring will be displayed on the multi-informa-

tion display.

10 Press **</>** of the meter control switches and select “Yes” and then press **OK**.

The tire pressure warning light will slowly blink 3 times and a message indicating that ID code registration is being performed will be displayed on the multi-information display. Wheel set changing will be canceled and registration will begin.

When registration is being performed, the tire pressure warning light will blink for approximately 1 minute then illuminate and “---” will be displayed for the inflation pressure of each tire on the multi-information display.

11 Drive straight (with occasional left and right turns) at approximately 40 km/h (25 mph) or more for approximately 10 to 30 minutes.

When registration is complete, the

tire pressure warning light will turn off and a message indicating that registration has been completed will be displayed on the multi-information display.

Registration may take longer than normal to complete if the vehicle speed cannot be maintained at approximately 40 km/h (25 mph) or more. If registration cannot be completed after driving for 1 hour or more, perform the registration procedure again from the beginning.

12 If the tire inflation pressure of the wheel set installed differs from that of the previous set, it will be necessary to perform the tire inflation pressure setting procedure of the tire pressure warning system.

If the specified tire inflation pressure is the same, it will not be necessary to perform the tire inflation pressure setting procedure.

■ **When registering ID codes**

- Normally, ID codes registration can be completed within approximately 30 minutes.
- ID code registration is performed while driving at a vehicle speed of approximately 40 km/h (25 mph) or more.

■ **If ID codes are not registered easily**

- In the following situations, ID code registration may take longer than usual to be completed or may not be possible.
 - When the vehicle has not been parked for approximately 15 minutes or more before being driven
 - Vehicle is not driven at approximately 40 km/h (25 mph) or more
 - Vehicle is driven on unpaved roads
 - Vehicle is driven near other vehicles and system cannot recog-

nize tire pressure warning valve and transmitters of your vehicle over those of other vehicles

- Wheel with tire pressure warning valve and transmitter installed is inside or near the vehicle
- If the vehicle is reversed during registration, all data collected until then will be cleared. Perform driving again.
- If registration does not complete after driving for 1 hour or more, perform the ID code registration procedure again from the beginning.
- If the tire pressure warning light does not blink 3 times when performing ID code registration procedure, the procedure may not have started. Perform the procedure again from the beginning.
- If the ID codes cannot be registered even when performing the above procedure, contact your Toyota dealer.

■ Canceling ID code registration

To cancel ID code registration after it has been started, select "Register New Valve / ID" again on the multi-information display.

If ID code registration has been canceled, the tire pressure warning light will turn off.

If the warning light does not turn off, ID code registration may not have been canceled correctly.

To cancel registration, select "Register New Valve / ID" on the multi-information display.

Selecting wheel set

Your vehicle is equipped with a

tire pressure warning system with a function to register two sets of ID codes. This allows for registration of a second wheel set, for example a winter set.

- The wheel set can be changed only if a second wheel set has been registered to the system. If a second wheel set has not been registered, message will be displayed and it will not be possible to change to the selected wheel set. ID codes can be registered by yourself.
- Only a change between both registered wheel set is possible, mixing between these wheel sets is not supported.
- While registering ID codes, it may not be possible to change between wheel sets normally. Cancel registration before changing between wheel sets.
 - 1 Install the desired wheel set.
 - 2 Start the fuel cell system.
 - 3 Press and hold OK to display the cursor on the content display area (center) of the multi-information display.
 - 4 Press / of the meter control switches to select  and then press OK.

- 5 Press \langle / \rangle of the meter control switches, select “Vehicle Settings”, and then press and hold OK .
- 6 Press \langle / \rangle of the meter control switches, select “TPWS setting” and then press OK .
- 7 Press \langle / \rangle of the meter control switches to select “Tire Set Switching”, then press OK .
- 8 Press \langle / \rangle of the meter control switches to select “Register Valve / ID”, then press OK .
- 9 Press \langle / \rangle of the meter control switches and wheel set (“Tire Set 1” or “Tire Set 2”) displayed for the set selection setting, the press OK .
- 10 Press \langle / \rangle of the meter control switches and select “Yes” and then press OK .

The tire pressure warning light will slowly blink 3 times, a message indicating that change is occurring will be displayed, and the wheel set change will begin.

Wheel set change will begin and

the tire pressure warning light will blink for 1 minute and then illuminate. Also, while the change is being performed, and “---” will be displayed for the tire inflation pressure of each tire on the multi-information display.

After approximately 2 minutes, the wheel set change will complete, the tire pressure warning light will turn off, and a completion message will be displayed on the multi-information display.

If changing does not complete after approximately 4 minutes, a message indicating that the change could not be completed will be displayed.

Check which wheel set is installed and perform the change procedure again from the beginning.

- 11 If the specified tire inflation pressure of the wheel set installed differs from that of the previous set, it will be necessary to perform the tire inflation pressure setting procedure of the tire pressure warning system. (→P.565)

If the specified tire inflation pressure is the same, it will not be necessary to perform the tire inflation pressure setting procedure.

- 12 Register the position of each wheel.

■ Certifications for the tire pressure warning system

→P.758

Tires (Vehicles with Toyota Teammate Advanced Drive)

Replace or rotate tires in accordance with maintenance schedules and treadwear.

Checking tires

Check if the treadwear indicators are showing on the tires. Also check the tires for uneven wear, such as excessive wear on one side of the tread.

A New tread

B Worn tread

C Treadwear indicator

The location of treadwear indicators is shown by a “TWI” or “△” mark,

etc., molded into the sidewall of each tire.

Replace the tires if the treadwear indicators are showing on a tire.

■ When to replace your vehicle's tires

Tires should be replaced if:

- The treadwear indicators are showing on a tire.
- You have tire damage such as cuts, splits, cracks deep enough to expose the fabric, and bulges indicating internal damage
- A tire goes flat repeatedly or cannot be properly repaired due to the size or location of a cut or other damage

If you are not sure, consult with your Toyota dealer.

■ Tire life

Any tire over 6 years old must be checked by a qualified technician even if it has seldom or never been used or damage is not obvious.

■ Maximum load of tire

Check that the maximum load of the replacement tire is greater than 1/2 of the Gross Axle Weight Ratings (GAWR) of either the front axle or the rear axle, whichever is greater.

For the GAWR, see the Certification Label.

For the maximum load of the tire, see the load limit at maximum cold tire inflation pressure mentioned on the sidewall of the tire. (→P.664)

■ Tire types

● Summer tires

Summer tires are high-speed performance tires best suited to highway driving under dry conditions. Since summer tires do not have the same traction performance as snow tires, summer tires are inadequate for driving on snow-covered or icy roads. For driving on snow-covered roads or icy roads, the use of snow tires is recommended. When installing snow tires, be sure to replace all four tires.

● All season tires

All season tires are designed to provide better traction in snow and to be adequate for driving in most winter conditions as well as for use year-round. All season tires, however, do not have adequate traction performance compared with snow tires in heavy or loose snow. Also, all season tires fall short in acceleration and handling performance compared with summer tires in highway driving.

● Snow tires

For driving on snow-covered roads or icy roads, we recommend using snow tires. If you need snow tires, select tires of the same size, construction and load capacity as the originally installed tires. Since your vehicle has radial tires as original equipment, make sure your snow tires also have radial construction. Do not install studded tires without first checking local regulations for possible restrictions. Snow tires should be installed on all wheels. (→P.470)

■ **If the tread on snow tires wears down below 0.16 in. (4 mm)**

The effectiveness of the tires as snow tires is lost.

⚠ WARNING

■ **When inspecting or replacing tires**

Observe the following precautions to prevent accidents. Failure to do so may cause damage to parts of the drive train as well as dangerous handling characteristics, which may lead to an accident resulting in death or serious injury.

- Do not mix tires of different makes, models or tread patterns. Also, do not mix tires of remarkably different treadwear.
- Do not use tire sizes other than those recommended by Toyota.
- Do not mix differently constructed tires (radial, bias-belted or bias-ply tires).
- Do not mix summer, all season and snow tires.
- Do not use tires that have been used on another vehicle. Do not use tires if you do not know how they were used previously.

⚠ NOTICE

■ **Driving on rough roads**

Take particular care when driving on roads with loose surfaces or potholes.

These conditions may cause losses in tire inflation pressure, reducing the cushioning ability of the tires. In addition, driving on rough roads may cause damage to the tires themselves, as well as the vehicle's wheels and body.

Tire rotation

Rotate the tires in the order shown.

A Front

To equalize tire wear and extend tire life, Toyota recommends that tire rotation is carried out at the same interval as tire inspection.

Do not fail to initialize the tire pressure warning system after tire rotation.

Tire pressure warning system

Your vehicle is equipped with a tire pressure warning system that uses tire pressure warning valves and transmitters to detect

low tire inflation pressure before serious problems arise.

- The tire pressure detected by the tire pressure warning system can be displayed on the multi-information display. (→P.147)

- If the tire pressure drops below a predetermined level, the driver is warned by a screen display and a warning light. (→P.618)

■ **Routine tire inflation pressure checks**

The tire pressure warning system does not replace routine tire inflation pressure checks. Make sure to check tire inflation pressure as part of your routine of daily vehicle checks.

■ **Tire inflation pressure**

- It may take a few minutes to display the tire inflation pressure

after the power switch is turned to ON. It may also take a few minutes to display the tire inflation pressure after inflation pressure has been adjusted.

- Tire inflation pressure changes with temperature. The displayed values may also be different from the values measured using a tire pressure gauge.

■ **Situations in which the tire pressure warning system may not operate properly**

- In the following cases, the tire pressure warning system may not operate properly.
 - If non-genuine Toyota wheels are used.
 - If a tire has been replaced with a tire that is not an OE (Original Equipment) tire.
 - If a tire has been replaced with a tire that is not of the specified size.
 - If tire chains, etc. are installed.
 - If a window tint that affects the radio wave signals is installed.
 - If there is a lot of snow or ice on the vehicle, particularly around the wheels or wheel housings.
 - If the tire inflation pressure is much higher than the specified level.
 - If wheels not equipped with tire pressure warning valves and transmitter are used.
 - If the ID code on the tire pressure warning valves and transmitters is not registered in the tire pressure warning computer.
- Performance may be affected in the following situations.
 - When driving near a TV tower, electric power plant, gas station, radio station, large display, airport or other facility that generates strong radio waves or electrical noise
 - When carrying a portable radio, cellular phone, cordless phone or other wireless communication device

If tire position information is not cor-

rectly displayed due to the radio wave conditions, the display may be corrected by changing the location of the vehicle as the radio wave conditions may change.

- When the vehicle is stopped, the time taken for the warning to start or turn off may be longer.
- When the inflation pressure of a tire drops rapidly, for example when a tire has burst, the warning may not operate.

■ **Warning performance of the tire pressure warning system**

The warning of the tire pressure warning system will change in accordance the conditions under which it was initialized. For this reason, the system may give a warning even if the tire pressure does not reach a low enough level, or if the pressure is higher than the pressure that was adjusted to when the system was initialized.

■ **Tire pressure warning system certification**

→P.758

Installing tire pressure warning valves and transmitters

When replacing the tires or wheels, the tire pressure warning valves and transmitters must be installed to the wheels which will be installed to the vehicle.

When new tire pressure warning valves and transmitters are installed, new ID codes must be registered in the tire pressure warning computer and the tire pressure warning system must be initialized. (→P.578)

■ **Replacing tires and wheels**

If the ID codes of the tire pressure warning valves and transmitters are not registered, the tire pressure warning system will not work properly. In this case, after driving for about 10 minutes, the tire pressure warning light will blink for approximately 1 minute and then illuminate to indicate a system malfunction.

 NOTICE

■ **Repairing or replacing tires, wheels, tire pressure warning valves, transmitters and tire valve caps**

- When removing or fitting the wheels, tires or the tire pressure warning valves and transmitters, contact your Toyota dealer as the tire pressure warning valves and transmitters may be damaged if not handled correctly.
- Make sure to install the tire valve caps. If the tire valve caps are not installed, water could enter the tire pressure warning valves, corrode the valve, and cause sticking and air leaks.
- When replacing tire valve caps, do not use tire valve caps other than those specified. The cap may become stuck.

Initializing the tire pressure warning system

■ **The tire pressure warning system must be initialized in the following circumstances:**

- When the tire inflation pressure is changed such as when changing traveling

speed or load weight.

- When the tire inflation pressure is changed such as when the tire size is changed.
- When rotating the tires.
- After performing the transmitter ID code registration procedure. (→P.578)

When the tire pressure warning system is initialized, the current tire inflation pressure is set as the benchmark pressure.

■ How to initialize the tire pressure warning system

- 1 Park the vehicle in a safe place, turn the power switch off and wait 20 minutes or more.

Initialization cannot be performed while the vehicle is moving.

- 2 Adjust the tire inflation pressure to the specified cold tire inflation pressure level.

Make sure to adjust the tire pressure to the specified cold tire inflation pressure level. The tire pressure warning system will operate based on this pressure level.

- 3 Start the fuel cell system.
- 4 Press < or > of the meter control switch to select .
- 5 Press ^ or v to select “Vehicle Settings” and then press and hold OK.

- 6 Press ^ or v to select “TPWS” and then press OK.
- 7 Press ^ or v to select “Set Pressure”. Then press and hold OK until the tire pressure warning light starts blinking.

A message is displayed on the multi-information display. Also, “--” is displayed for inflation pressure of each tire on the multi-information display while the tire pressure warning system determines the position.

- 8 Drive at approximately 25 mph (40 km/h) or more for approximately 10 to 30 minutes.

When initialization is complete, the inflation pressure of each tire will be displayed on the multi-information display.

Even if the vehicle is not driven at approximately 25 mph (40 km/h) or more, initialization can be completed by driving for a long time. However, if initialization does not complete after driving for 1 hour or more, park the vehicle in a safe place for approximately 20 minutes and then drive the vehicle again.

■ When initializing

- Initialization is performed while

driving at a vehicle speed of approximately 25 mph (40 km/h) or more.

- Make sure to carry out initialization after adjusting the tire inflation pressure. Also, make sure the tires are cold before carrying out initialization or tire inflation pressure adjustment.
- The tire pressure warning system can be initialized by yourself, but depending on the driving conditions and driving environment, initialization may take some time to complete.

■ **The initialization operation**

- If you have accidentally turned the power switch off during initialization, it is not necessary to manually restart the initialization again, as initialization will restart automatically the next time the power switch is turned to ON.
- If you accidentally perform initialization when initialization is not necessary, adjust the tire inflation pressure to the specified level when the tires are cold, and conduct initialization again.
- While the position of each tire is being determined and the inflation pressures are not being displayed on the multi-information display, if the inflation pressure of a tire drops, the tire pressure warning light will come on.

■ **If the tire pressure warning system is not initialized properly**

- In the following situations, initialization may take longer than usual to be completed or may not be possible. Normally, initialization completes within approximately 30 minutes.
 - Vehicle is not driven at approximately 25 mph (40 km/h) or more
 - Vehicle is driven on unpaved roads
 - Vehicle is driven near other vehicles and system cannot recognize tire pressure warning valve

and transmitters of your vehicle over those of other vehicles

If initialization does not complete after driving for 1 hour or more, park the vehicle in a safe place for approximately 20 minutes and then drive the vehicle again.

- If the vehicle is reversed during initialization, the data up to that point is reset, so perform the initialization procedure again from the beginning.
- In the following situations, initialization will not be started or was not completed properly and the system will not operate properly. Perform the initialization procedure again.
 - If, when attempting to start initialization, the tire pressure warning light does not blink 3 times.
 - If, when the vehicle has been driven for about 20 minutes after performing initialization, the tire pressure warning light blinks for approximately 1 minute and then illuminates.

If initialization cannot be completed after performing the above procedure, contact your Toyota dealer.

⚠ WARNING

■ **When initializing the tire pressure warning system**

Do not initialize the tire pressure warning system without first adjusting the tire inflation pressure to the specified level. Otherwise, the tire pressure warning light may not come on even if the tire inflation pressure is low, or it may come on when the tire inflation pressure is actually normal.

Registering ID codes

Every tire pressure warning valve and transmitter has a unique ID code. When replacing

a tire pressure warning valve and transmitter, it is necessary to register the ID codes. When registering the ID codes, perform the following procedure.

- 1 When registering the ID codes, perform the following procedure. Park the vehicle in a safe place and turn the power switch off, wait for approximately 15 minutes or more and perform the procedure.
- 2 Start the fuel cell system. (→P.219)
- 3 Press < or > of the meter control switch to select .
- 4 Press ^ or v to select “Vehicle Settings” and then press and hold OK.
- 5 Press ^ or v to select “TPWS” and then press OK.
- 6 Press ^ or v to select “Change Wheel”. Then press and hold OK until the tire pressure warning light blinks slowly 3 times.

Then a message will be displayed on the multi-information display.

When registration is being performed, the tire pressure warning light will blink for approximately 1 minute then illuminate and “--” will be displayed for the inflation pressure of each tire on the multi-infor-

mation display.

- 7 Drive at 25 mph (40 km/h) or more for approximately 10 to 30 minutes.

Registration is complete when the tire pressure warning light turns off and the inflation pressure of each tire is displayed on the multi-information display.

Even if the vehicle is not driven at approximately 25 mph (40 km/h) or more, registration can be completed by driving for a long time. However, if registration does not complete after driving for 1 hour or more, perform the procedure again from the beginning.

- 8 Initialize the tire pressure warning system. (→P.576)

■ When registering ID codes

- ID code registration is performed while driving at a vehicle speed of approximately 25 mph (40 km/h) or more.
- Before performing ID code registration, make sure that no wheels with tire pressure warning valve and transmitters installed are near the vehicle.
- Make sure to initialize the tire pressure warning system after registering the ID codes. If the system is initialized before registering the ID codes, the initialized values will be invalid.
- ID codes can be registered by

yourself, but depending on the driving conditions and driving environment, registration may take some time to complete.

■ **Canceling ID code registration**

- To cancel ID code registration after it has been started, turn the power switch off before driving the vehicle.

If the vehicle is driven after ID code registration is started, to cancel registration, perform the ID code registration start procedure again and turn the power switch off before driving.

- If ID code registration has been canceled, the tire pressure warning light will blink for approximately 1 minute when the power switch is turned to ON and then illuminate. The tire pressure warning system will be operational when the tire pressure warning light turns off.
- If the warning light does not turn off even after several minutes have elapsed, ID code registration may not have been canceled correctly. To cancel registration, perform the ID code registration start procedure again and then turn the power switch off before driving.

■ **If ID codes are not registered properly**

- In the following situations, ID code registration may take longer than usual to be completed or may not be possible. Normally, registration completes within approximately 30 minutes.
 - Vehicle is not parked for approximately 20 minutes or more before driving
 - Vehicle is not driven at approximately 25 mph (40 km/h) or more
 - Vehicle is driven on unpaved roads
 - Vehicle is driven near other vehicles and system cannot recognize tire pressure warning valves and transmitters of your vehicle

over those of other vehicles

- Wheel with tire pressure warning valve and transmitter installed is inside or near the vehicle

If registration does not complete after driving for 1 hour or more, perform the ID code registration procedure again from the beginning.

- If the vehicle is reversed during registration, the data up to that point is reset, so perform the registration procedure again from the beginning.
- In the following situations, ID code registration will not be started or was not completed properly and the system will not operate properly. Perform the ID code registration procedure again.
 - If, when attempting to start ID code registration, the tire pressure warning light does not blink slowly 3 times.
 - If, when the vehicle has been driven for about 20 minutes after performing ID code registration, the tire pressure warning light blinks for approximately 1 minute and then illuminates.
- If ID code registration cannot be completed after performing the above procedure, contact your Toyota dealer.

Replacing the tire

When replacing the tires yourself, prepare the necessary tools and a jack. If necessary tire replacement seems difficult to perform, contact your Toyota dealer.

Before jacking up the vehicle

- Stop the vehicle in a safe place on a hard, flat surface.
- Set the parking brake.
- Shift the shift position to P.
- Stop the fuel cell system.

Jack and tools

As your vehicle is not installed spare tire, the following tools for replacing a tire are not included with your vehicle. They can be purchased at your Toyota dealer.

- Wheel nut wrench
- Jack
- Jack handle

⚠ WARNING**Using the tire jack**

Observe the following precautions. Improper use of the tire jack may cause the vehicle to suddenly fall off the jack, leading to death or serious injury.

- Do not use the tire jack for any purpose other than replacing tires or installing and removing tire chains.

- Do not use other tire jacks for replacing tires on this vehicle.
- Put the jack properly in its jack point.
- Do not put any part of your body under the vehicle while it is supported by the jack.
- Do not start the fuel cell system or drive the vehicle while the vehicle is supported by the jack.
- Do not raise the vehicle while someone is inside.
- When raising the vehicle, do not put an object on or under the jack.
- Do not raise the vehicle to a height greater than that required to replace the tire.
- Use a jack stand if it is necessary to get under the vehicle.
- When lowering the vehicle, make sure that there is no-one near the vehicle. If there are people nearby, warn them vocally before lowering.

Removing a tire

- 1 Chock the tires.

Tire	Wheel chock positions
Front left-hand side	Behind the rear right-hand side tire
Front right-hand side	Behind the rear left-hand side tire
Rear left-hand side	In front of the front right-hand side tire
Rear right-hand side	In front of the front left-hand side tire

- Slightly loosen the wheel nuts (one turn).

- Turn the tire jack portion **A** by hand until the notch of the jack is in contact with the jack point.

The jack point guides are located under the rocker panel. They indi-

cate the jack point positions.

- Raise the vehicle until the tire is slightly raised off the ground.

- Remove all the wheel nuts and the tire.

When resting the tire on the ground, place the tire so that the wheel design faces up to avoid scratching the wheel surface.

⚠ WARNING

■ **Replacing a tire**

- Do not touch the disc wheels or the area around the brakes immediately after the vehicle has been driven. After the vehicle has been driven the disc wheels and the area around the brakes will be extremely hot. Touching these areas with hands, feet or other body parts while changing a tire, etc. may result in burns.
- Failure to follow these precautions could cause the wheel nuts to loosen and the tire to fall off, resulting in death or serious injury.
- Never use oil or grease on the wheel bolts or wheel nuts. Oil and grease may cause the wheel nuts to be excessively tightened, leading to bolt or disc wheel damage. Remove any oil or grease that has adhered when installing the wheel nuts.
- After replacing a tire, check the tightening torque as soon as possible. If you cannot confirm the tightening torque yourself, have the vehicle inspected at your Toyota dealer.
- Do not attach a heavily damaged wheel ornament, as it may fly off the wheel while the vehicle is moving.
- When installing a tire, only use wheel nuts that have been specifically designed for that wheel.
- If there are any cracks or deformations in the bolt screws, nut threads or bolt holes of the wheel, have the vehicle inspected by your Toyota dealer.

⚠ NOTICE

■ **Repairing or replacing tires, wheels, tire pressure warning valves, transmitters and tire valve caps**

→P.563, 576

Installing the tire

- 1** Remove any dirt or foreign matter from the wheel contact surface.

If foreign matter is on the wheel contact surface, the wheel nuts may loosen while the vehicle is in motion, causing the tire to come off.

- 2** Install the tire and loosely tighten each wheel nut by hand by approximately the same amount.

Turn the wheel nuts until the washers come into contact with the disc wheel.

A Washer

B Disc wheel

3 Lower the vehicle.

4 Securely tighten the wheel nuts two or three times in the order shown in the illustration using a wheel nut wrench. Tightening torque: 103 ft•lbf (140 N•m, 14.3 kgf•m)

Tire inflation pressure

Checking the specified tire inflation pressure

The recommended cold tire inflation pressure and tire size are displayed on the tire and loading information label. (→P.663)

TIRE AND LOADING INFORMATION		RENSEIGNEMENTS SUR LES PNEUS ET LE CHARGEMENT			
SEATING CAPACITY TOTAL X FRONT X REAR X The combined weight of occupants and cargo should never exceed XXX kg or XXX lb.		NOMBRE DE PLACES - TOTAL X AVANT X ARRIERE X Le poids total des occupants et du chargement ne doit jamais dépasser XXX kg ou XXX lb.

Inspection and adjustment procedure

A Tire valve

B Tire pressure gauge

- 1 Remove the tire valve cap.
- 2 Press the tip of the tire pressure gauge onto the tire valve.
- 3 Read the pressure using the gauge gradations.
- 4 If the tire inflation pressure is not at the recommended level, adjust the pressure. If you add too much air, press the center of the valve to deflate.
- 5 After completing the tire inflation pressure measurement and adjustment, apply soapy water to the valve and check for leakage.
- 6 Put the tire valve cap back on.

■ Tire inflation pressure check interval

You should check tire inflation pressure every two weeks, or at least once a month. Do not forget to check the spare.

■ Effects of incorrect tire inflation pressure

Driving with incorrect tire inflation pressure may result in the following:

- Reduced fuel economy
- Reduced driving comfort and poor handling
- Reduced tire life due to wear
- Reduced safety
- Damage to the drive train

If a tire needs frequent inflating, have it checked by your Toyota dealer.

■ Instructions for checking tire inflation pressure

When checking tire inflation pressure, observe the following:

- Check only when the tires are cold.
If your vehicle has been parked for at least 3 hours or has not been driven for more than 1 mile or 1.5 km, you will get an accurate cold tire inflation pressure reading.
- Always use a tire pressure gauge. It is difficult to judge if a tire is properly inflated based only on its appearance.
- It is normal for the tire inflation pressure to be higher after driving as heat is generated in the tire. Do not reduce tire inflation pressure after driving.
- Never exceed the vehicle capacity weight. Passengers and luggage weight should be placed so that the vehicle is balanced.

⚠ WARNING

■ Proper inflation is critical to save tire performance

Keep your tires properly inflated. If the tires are not properly inflated, the following conditions may occur which could lead to an accident resulting in death or serious injury:

- Excessive wear
- Uneven wear
- Poor handling
- Possibility of blowouts resulting from overheated tires
- Air leaking from between tire and wheel
- Wheel deformation and/or tire damage

 **WARNING**

- Greater possibility of tire damage while driving (due to road hazards, expansion joints, sharp edges in the road, etc.)

 **NOTICE**

■ **When inspecting and adjusting tire inflation pressure**

Be sure to put the tire valve caps back on.
If a valve cap is not installed, dirt or moisture may get into the valve and cause an air leak, resulting in decreased tire inflation pressure.

Wheels

If a wheel is bent, cracked or heavily corroded, it should be replaced. Otherwise, the tire may separate from the wheel or cause a loss of handling control.

Wheel selection

When replacing wheels, care should be taken to ensure that they are equivalent to those removed in load capacity, diameter, rim width and inset*.

Replacement wheels are available at your Toyota dealer.

*: Conventionally referred to as offset.

Toyota does not recommend using the following:

- Wheels of different sizes or types
- Used wheels
- Bent wheels that have been straightened

■ When replacing wheels

The wheels of your vehicle are equipped with tire pressure warning valves and transmitters that allow the tire pressure warning system to provide advance warning in the event of a loss in tire inflation pressure. Whenever wheels are replaced, the tire pressure warning valves and transmitters must be installed. (→P.563, 576)

⚠ WARNING**■ When replacing wheels**

- Do not use wheels that are a different size from those recommended in the Owner's Manual, as this may result in a loss of handling control.
- Never use an inner tube in a leaking wheel which is designed for a tubeless tire. Doing so may result in an accident, causing death or serious injury.

■ When installing the wheel nuts

Never use oil or grease on the wheel bolts or wheel nuts. Oil and grease may cause the wheel nuts to be excessively tightened, leading to bolt or disc wheel damage. In addition, the oil or grease can cause the wheel nuts to loosen and the wheel may fall off, causing an accident and resulting in death or serious injury. Remove any oil or grease from the wheel bolts or wheel nuts.

■ Use of defective wheels prohibited

Do not use cracked or deformed wheels. Doing so could cause the tire to leak air during driving, possibly causing an accident.

- Ensure that only genuine Toyota wheels are used on your vehicle. Tire pressure warning valves and transmitters may not work properly with non-genuine wheels.

Aluminum wheel precautions

- Use only Toyota wheel nuts and wheel nut wrenches designed for use with your aluminum wheels.
- When rotating, repairing or changing your tires, check that the wheel nuts are still tight after driving 1000 miles (1600 km).
- Be careful not to damage the aluminum wheels when using tire chains.
- Use only Toyota genuine balance weights or equivalent and a plastic or rubber hammer when balancing your wheels.

⚠ NOTICE**■ Replacing tire pressure warning valves and transmitters**

- Because tire repair or replacement may affect the tire pressure warning valves and transmitters, make sure to have tires serviced by your Toyota dealer or other qualified service shop. In addition, make sure to purchase your tire pressure warning valves and transmitters at your Toyota dealer.

Air conditioning filter

The air conditioning filter must be changed regularly to maintain air conditioning efficiency.

Removing the air conditioning filter

- 1 Turn the power switch off.
- 2 Open the glove box.

- 3 Remove the panel.

- 4 Unlock the filter cover (A), pull the filter cover out of the

claws (B), and remove the filter cover.

- 5 Remove the filter case.

- 6 Remove the air conditioning filter from the filter case and replace it with a new one.

The “↑ UP” marks shown on the filter and the filter case should be pointing up.

■ Checking interval

Inspect and replace the air conditioning filter according to the maintenance schedule. In dusty areas or

areas with heavy traffic flow, early replacement may be required. (For scheduled maintenance information, please refer to the “Scheduled Maintenance Guide” or “Owner’s Manual Supplement”.)

■ **If air flow from the vents decreases dramatically**

The filter may be clogged. Check the filter and replace if necessary.

■ **Air conditioning filter with deodorizing function**

When fragrances are placed in your vehicle, the deodorizing effect may become significantly weakened in a short period.

When an air conditioning odor comes out continuously, replace the air conditioning filter.

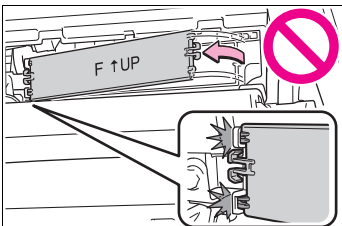

⚠ NOTICE

■ **When using the air conditioning system**

Make sure that a filter is always installed. Using the air conditioning system without a filter may cause damage to the system.

■ **To prevent damage to the filter cover**

When moving the filter cover in the direction of arrow to release the fitting, pay attention not to apply excessive force to the claws. Otherwise, the claws may be damaged.

Cleaning the traction battery air intake vents

To prevent the fuel economy from being affected, visually inspect the traction battery air intake vents periodically for clogs. If it is dusty or clogged or if “Maintenance Required for Traction Battery Cooling Parts See Owner’s Manual” is shown on the multi-information display, clean the air intake vents using the following procedures:

■ **Scheduled maintenance of the air intake vents is necessary when**

In some situations such as when the vehicle is used frequently or in heavy traffic or dusty areas, the air intake vents may need to be cleaned more regularly. For details, refer to the “Owner’s Warranty Information Booklet” or “Owner’s Manual Supplement”.

■ **Cleaning the air intake vents**

Improper handling of the air intake vent covers and filters may result in damage to them. If you have any concerns about cleaning the filter, contact your Toyota dealer.

 NOTICE

■ If “Maintenance Required for Traction Battery Cooling Parts See Owner’s Manual” is shown on the multi-information display

Clean the air intake vents immediately.

If the vehicle is continuously driven with the warning message displayed, it may cause a malfunction or output restriction of the traction battery.

Cleaning procedure

- 1 Turn the power switch off.
- 2 Remove the grille.

- 3 Remove the filter from the air intake vent grille.

If dust has accumulated on the air intake vent grille, remove the dust with a vacuum cleaner, etc.

- 4 Remove the dust and sand from the filter.

Using a vacuum cleaner, etc., absorb dust and sand from the filter by profiling the nozzle lightly along the fold.

- 5 Hold the filter to the light and check if it is not clogged.

If the dust or sand cannot be removed completely, contact your Toyota dealer.

- 6 Reinstall the filter to the grille.

7 Install the grille.

▶ If “Maintenance Required for Traction Battery Cooling Parts See Owner’s Manual” was displayed on the multi-information display

8 Start the fuel cell system and check that the warning message is no longer displayed.

It may be necessary to drive the vehicle for approximately 20 minutes before the warning message is displayed again then disappears.

If the warning message does not disappear after some time, have the vehicle inspected by your Toyota dealer.

■ **If the dust or sand on the filter cannot be removed**

It is recommended to use a vacuum cleaner with plastic brushes.

⚠ WARNING

■ **When cleaning the air intake vents**

- Do not use water or other liquids to clean the air intake vents. If water is applied to the traction battery or other components, a malfunction or fire may occur.

- Before cleaning the air intake vents, make sure to turn the power switch off to stop the fuel cell system.

- Do not put a hand or leg in the air intake vent. If it is caught in a cooling fan, or if it touches a high voltage part that results in an electric shock, death or serious injuries may result.

■ **When removing the air intake vent covers**

Do not touch the service plug located near the air intake vents. (→P.93)

⚠ NOTICE

■ **When cleaning the air intake vents**

Do not use an air blow gun, etc. Dust may be blown out, possibly causing a malfunction or output restriction of the traction battery.

■ **To prevent damage to the vehicle**

Observe the following precautions:

- Do not allow water or foreign matter to enter the air intake vent.
- Make sure to reinstall the filter and cover to their original positions after cleaning.

**NOTICE**

● Do not install anything to the air intake vent other than the exclusive filter for this vehicle or use the vehicle without the filter installed.

■ **To prevent damage to the filter**

Observe the following precautions.

If the filter is damaged, have it replaced with a new filter by your Toyota dealer.

- Do not use an air blow gun, etc.
- Do not press hard a vacuum cleaner, etc. against the filter.
- Do not use a hard brush, such as a metal brush.
- Do not break the fold of the filter.

Electronic key battery

Replace the battery with a new one if it is depleted. As the key may be damaged if the following procedure is not performed properly, it is recommended that key battery replacement be performed by your Toyota dealer.

■ **If the electronic key battery is depleted**

The following symptoms may occur:

- The smart key system and wireless remote control will not function properly.
- The operational range will be reduced.

Items to prepare

- Flathead screwdriver
- Small flathead screwdriver
- Lithium battery CR2450 (vehicles without Toyota Teammate Advanced Drive) or CR2032 (vehicles with Toyota Teammate Advanced Drive)

■ **Use a lithium battery**

- Batteries can be purchased at your Toyota dealer, local electrical appliance shops or camera stores.
- Replace only with the same or equivalent type recommended by the manufacturer.
- Dispose of used batteries according to local laws.

Replacing the battery

1 Release the lock and remove the mechanical key.

▶ Type A

▶ Type B

2 Remove the key cover.

To prevent damage to the key, wrap the tip of the screwdriver with tape or a rag.

▶ Type A

▶ Type B

3 Remove the depleted battery using a small flathead screwdriver.

When removing the cover, the electronic key module may stick to the cover and the battery may not be visible. In this case, remove the electronic key module in order to remove the battery.

When removing the battery, use a screwdriver of an appropriate size.

Insert a new battery with the “+” terminal facing up.

▶ Type A

► Type B

4 When installing, reverse the steps listed.

⚠ WARNING

■ **Battery precautions**

Observe the following precautions.

Failure to do so may result in death or serious injury.

- Do not swallow the battery. Doing so may cause chemical burns.
- A coin battery or button battery is used in the electronic key. If a battery is swallowed, it may cause severe chemical burns in as little as 2 hours and may result in death or serious injury.
- Keep away new and removed batteries from children.
- If the cover cannot be firmly closed, stop using the electronic key and stow the key in the place where children cannot reach, and then contact your Toyota dealer.
- If you accidentally swallow a battery or put a battery into a part of your body, get emergency medical attention immediately.

■ **To prevent battery explosion or leakage of flammable liquid or gas**

- Replace the battery with a new battery of the same type. If a wrong type of battery is used, it may explode.
- Do not expose batteries to extremely low pressure due to high altitude or extremely high temperatures.
- Do not burn, break or cut a battery.

⚠ NOTICE

■ **When replacing the battery**

Use a flathead screwdriver of appropriate size. Applying excessive force may deform or damage the cover.

■ **For normal operation after replacing the battery**

Observe the following precautions to prevent accidents:

- Always work with dry hands. Moisture may cause the battery to rust.
- Do not touch or move any other component inside the remote control.
- Do not bend either of the battery terminals.

Checking and replacing fuses

If any of the electrical components do not operate, a fuse may have blown. If this happens, check and replace the fuses as necessary.

Checking and replacing fuses

- 1 Turn the power switch off.
 - 2 Open the fuse box cover.
 - ▶ Fuel cell unit compartment: type A fuse box
- Push the tabs in and lift the lid off.

- ▶ Fuel cell unit compartment: type B fuse box

Remove the fuel cell unit compartment cover (→P.552) and push the tabs in and lift the lid off.

- ▶ Driver's side instrument panel
- Push the tab in and remove the lid. Make sure to push the tab in during removal or installation.

- ▶ Passenger' side instrument panel
- Remove the cover.

Remove the footwell lights connector.

Remove the lid.
Make sure to push the claw when removing/installing the lid.

► Trunk

Remove the luggage mat (→P.496), and while lifting up the luggage under tray, use a flathead screw driver and remove the clip.

Push the tab in and lift the lid off.

3 Remove the fuse with the pullout tool. Only type A fuse can be removed using the pullout tool.

4 Check if the fuse is blown.
 Type A and B:
 Replace the blown fuse with a new fuse of an appropriate amperage rating. The amperage rating can be found on the fuse box lid.
 Type C and D:
 Contact your Toyota dealer.
 ▶ Type A

A Normal fuse

B Blown fuse
 ▶ Type B

A Normal fuse
 B Blown fuse
 ▶ Type C

A Normal fuse
 B Blown fuse
 ▶ Type D

A Normal fuse
 B Blown fuse

■ **After a fuse is replaced**

- When installing the lid, make sure that the tab is installed securely.
- If the lights do not turn on even after the fuse has been replaced, a bulb may need replacement.
- If the replaced fuse blows again, have the vehicle inspected by your Toyota dealer.

■ **If there is an overload in a circuit**

The fuses are designed to blow, protecting the wiring harness from damage.

⚠ WARNING

■ **To prevent system breakdowns and vehicle fire**

Observe the following precautions. Failure to do so may cause damage to the vehicle, and possibly a fire or injury.

- Never use a fuse of a higher amperage rating than that indicated, or use any other object in place of a fuse.
- Always use a genuine Toyota fuse or equivalent. Never replace a fuse with a wire, even as a temporary fix.
- Do not modify the fuses or fuse boxes.

⚠ NOTICE

■ **Before replacing fuses**

Have the cause of electrical overload determined and repaired by your Toyota dealer as soon as possible.

Headlight aim

Vertical movement adjusting bolts

- A Adjustment bolt A
- B Adjustment bolt B

Before checking the headlight aim

- Make sure the vehicle has a full tank of fuel and the area around the headlight is not deformed.
- Park the vehicle on level ground.
- Make sure the tire inflation pressure is at the specified level.
- Have someone sit in the driver's seat.
- Bounce the vehicle several times.

Adjusting the headlight aim

- Using a Phillips-head screwdriver, turn bolt A in either direction.
Remember the turning direction and the number of turns.

- Turn bolt B the same number of turns and in the same direction as step 1.

If the headlight cannot be adjusted using this procedure, take the vehicle to your Toyota dealer to adjust the headlight aim.

Light bulbs

If any lights burn out, have it replaced by your Toyota dealer.

LED Lights

The lights consist of a number of LEDs. If any of the LEDs burn out, take your vehicle to your Toyota dealer to have the light replaced.

Condensation build-up on the inside of the lens

Temporary condensation build-up on the inside of the headlight lens does not indicate a malfunction. Contact your Toyota dealer for more information in the following situations:

- Large drops of water have built up on the inside of the lens.
- Water has built up inside the headlight.

When trouble arises**8****8-1. Essential information**

Emergency flashers 602

If your vehicle has to be stopped in an emergency 602

If the vehicle is submerged or water on the road is rising 603

8-2. Steps to take in an emergency

If your vehicle needs to be towed..... 605

If you think something is wrong 609

If a warning light turns on or a warning buzzer sounds 610

If a warning message is displayed..... 622

If you have a flat tire.... 629

If the fuel cell system will not start 642

If you lose your keys ... 643

If the fuel door cannot be opened 644

If the electronic key does not operate properly.. 644

If the 12-volt battery is discharged 647

If your vehicle overheats 652

If the vehicle becomes stuck 656

Emergency flashers

The emergency flashers are used to warn other drivers when the vehicle has to be stopped on the road due to a breakdown, etc.

Operating instructions

Press the switch to flash all of the turn signal lights.

To turn them off, press the switch once again.

Emergency flashers

- If the emergency flashers are used for a long time while the fuel cell system is not operating (while the "READY" indicator is not illuminated), the 12-volt battery may discharge.
- If any of the SRS airbags deploy (inflate) or in the event of a strong rear impact, the emergency flashers will turn on automatically. The emergency flashers will turn off automatically after operating for approximately 20 minutes. To manually turn the emergency flashers off, press the switch twice. (The emergency flashers may not turn on automatically depending on the force of the impact and conditions of the collision.)

If your vehicle has to be stopped in an emergency

Only in an emergency, such as if it becomes impossible to stop the vehicle in the normal way, stop the vehicle using the following procedure:

Stopping the vehicle

- 1 Steadily step on the brake pedal with both feet and firmly depress it.
- Do not pump the brake pedal repeatedly as this will increase the effort required to slow the vehicle.
- 2 Shift the shift position to N.
 - ▶ If the shift position is shifted to N
 - 3 After slowing down, stop the vehicle in a safe place by the road.
 - 4 Stop the fuel cell system.
 - ▶ If the shift position cannot be shifted to N
 - 3 Keep depressing the brake pedal with both feet to reduce vehicle speed as much as possible.
 - 4 To stop the fuel cell system, press and hold the power switch for 2 consecutive seconds or more, or press it

briefly 3 times or more in succession.

- 5 Stop the vehicle in a safe place by the road.

■ If emergency stopped

The functions of the air conditioning, etc., may be partially limited in order to reduce the power consumption of the 12-volt battery.

WARNING

■ If the fuel cell system has to be turned off while driving

Turning the fuel cell system off while driving will not cause a loss of steering or braking control. However, power assist for the steering wheel may be lost making it difficult to steer smoothly before stopping the vehicle depending on the remaining charge in the 12-volt battery or usage conditions. Decelerate as much as possible before turning off the fuel cell system.

If the vehicle is submerged or water on the road is rising

This vehicle is not designed to be able to drive on roads that are deeply flooded with water. Do not drive on roads where the roads may be submerged or the water may be rising. It is dangerous to remain in the vehicle, if it is anticipated that the vehicle will be flooded or set adrift. Remain calm and follow the following.

- If the door can be opened, open the door and exit the vehicle.
- If the door cannot be opened, open the window using the power window switch and ensure an escape route.
- If the window can be opened, exit the vehicle through the window.
- If the door and window cannot be opened due to the rising water, remain calm, wait until the water level inside the vehicle rises to the point that the water pressure inside of the vehicle equals the water pressure outside of the vehicle and then open the door after waiting for the rising water to enter the vehicle, and exit the vehicle.

604 8-1. Essential information

When the outside water level exceeds half the height of the door, the door cannot be opened from the inside due to water pressure.

■ Water level exceeds the floor

When the water level exceeds the floor and time has passed, the electrical equipment will get damaged, the power windows will not operate, the motor stop, and the vehicle may not be able to get moving.

■ Using an emergency escape hammer*

Laminated glass is used in the windshield on this vehicle.

Laminated glass cannot be shattered with an emergency hammer*.

Tempered glass is used in the windows on this vehicle.

*: Contact your Toyota dealer or aftermarket accessory manufacturer for further information about an emergency hammer.

WARNING

■ Caution while driving

Do not drive on roads where the roads may be submerged or the water may be rising. Otherwise the vehicle may be damaged and cannot move, as well as become flooded and set adrift, which may lead to death.

If your vehicle needs to be towed

If towing is necessary, we recommend having your vehicle towed by your Toyota dealer or commercial towing service, using a wheel-lift type truck or flat-bed truck.

Use a safety chain system for all towing, and abide by all state/provincial and local laws.

Situations when it is not possible to be towed by another vehicle

In the following situations, it is not possible to be towed by another vehicle using cables or chains, as the rear wheels may be locked due to the parking lock. Contact your Toyota dealer or commercial towing service.

- There is a malfunction in the shift control system. (→P.622)
- There is a malfunction in the immobilizer system. (→P.82)
- There is a malfunction in the smart key system. (→P.644)
- The 12-volt battery is discharged. (→P.647)

Situations when it is necessary to contact dealers before towing

The following may indicate a problem with your transmission. Contact your Toyota dealer or commercial towing service before towing.

- The fuel cell system warning message is shown on the multi-information display and the vehicle does not move.
- The vehicle makes an abnormal sound.

Towing with a wheel-lift type truck

- ▶ From the front

Use a towing dolly under the rear wheels.

► From the rear

Use a towing dolly under the front wheels.

⚠ WARNING

Observe the following precautions. Failure to do so may result in death or serious injury.

■ **When towing the vehicle**

Be sure to transport the vehicle with all four wheels raised off the ground. If the vehicle is towed with the tires contacting the ground, the drivetrain and related parts may be damaged, an accident may occur due to a change in direction of the vehicle or electricity generated by the operation of the motor may cause a fire to occur depending on the nature of the damage or malfunction.

⚠ NOTICE

■ **To prevent damage to the vehicle when towing using a wheel-lift type truck**

When raising the vehicle, ensure adequate ground clearance for towing at the opposite end of the raised vehicle. Without adequate clearance, the vehicle could be damaged while being towed.

■ **Towing with a sling-type truck**

Do not tow with a sling-type truck to prevent body damage.

Using a flatbed truck

When using a flatbed truck to transport the vehicle, use tire strapping belts. Refer to the owner's manual of the flatbed truck for the tire strapping method.

In order to suppress vehicle movement during transportation, set the parking brake and turn the power switch off.

Emergency towing

If a tow truck is not available in an emergency, your vehicle may be temporarily towed using cables or chains secured to the emergency towing eyelets. This

should only be attempted on hard surfaced roads for short distances at under 18 mph (30 km/h).

A driver must be in the vehicle to steer and operate the brakes. The vehicle's wheels, drive train, axles, steering and brakes must be in good condition.

Emergency towing procedure

To have your vehicle towed by another vehicle, the towing eyelet must be installed to your vehicle. Install the towing eyelet using the following procedure.

- 1 Take out the screwdriver and towing eyelet.

► Type A

- A** Screwdriver
- B** Towing eyelet

► Type B

- A** Phillips-head screwdriver
- B** Towing eyelet

- 2 Remove the eyelet cover using a flathead screwdriver.

If the driver is a Phillips-head, replace it with flathead.

To protect the bodywork, place a rag between the screwdriver and the vehicle body as shown in the illustration.

- 3 Insert the towing eyelet into the hole and tighten partially by hand.

608 8-2. Steps to take in an emergency

- 4 Tighten down the towing eyelet securely using a screwdriver or hard metal bar.

- 5 Securely attach cables or chains to the towing eyelet.

Take care not to damage the vehicle body.

- 6 Enter the vehicle being towed and start the fuel cell system.

If the fuel cell system does not start, turn the power switch to ON.

- 7 Shift the shift position to N and release the parking brake.

Turn automatic mode off. (→P.232)

■ While towing

If the fuel cell system is off, the power assist for the brakes and steering will not function, making steering and braking more difficult.

■ Wheel nut wrench

Wheel nut wrench can be purchased at your Toyota dealer.

■ Before transporting or towing in frozen areas

Operate the water release function. Otherwise, the fuel cell system may freeze and the vehicle may not be able to be started. (→P.236)

⚠ WARNING

Observe the following precautions. Failure to do so may result in death or serious injury.

■ While towing

● When towing using cables or chains, avoid sudden starts, etc. which place excessive stress on the towing eyelets, cables or chains. The towing eyelets, cables or chains may become damaged, broken debris may hit people, and cause serious damage.

● Do not perform any of the following as doing so may cause the parking lock mechanism to engage, locking the rear wheels and possibly leading to an accident resulting in death or serious injury:

- Unfasten the driver's seat belt and open the driver's door.
- Turn the power switch off.

■ Installing towing eyelets to the vehicle

Make sure that towing eyelets are installed securely.

If not securely installed, towing eyelets may come loose during towing.

⚠ NOTICE

■ To prevent damage to the vehicle during emergency towing

Do not secure cables or chains to the suspension components.

If you think something is wrong

If you notice any of the following symptoms, your vehicle probably needs adjustment or repair. Contact your Toyota dealer as soon as possible.

Visible symptoms

- Fluid leaks under the vehicle. (Water dripping from the air conditioning after use is normal.)
- Flat-looking tires or uneven tire wear
- The high coolant temperature gauge needle continually points higher than normal.

Audible symptoms

- Hydrogen gas leakage noises can be heard. (→P.99)
- Excessive tire squeal when cornering
- Strange noises related to the suspension system
- Other noises related to the fuel cell system

Operational symptoms

- Stumbling or running roughly
- Appreciable loss of power
- Vehicle pulls heavily to one

side when braking

- Vehicle pulls heavily to one side when driving on a level road
- Loss of brake effectiveness, spongy feeling, pedal almost touches the floor

If a warning light turns on or a warning buzzer sounds

Calmly perform the following actions if any of the warning lights comes on or flashes. If a light comes on or flashes, but then goes off, this does not necessarily indicate a malfunction in the system. However, if this continues to occur, have the vehicle inspected by your Toyota dealer.

Actions to the warning lights or warning buzzers

■ Hydrogen leak warning light (warning buzzer)

Warning light	Details/Actions
	When a hydrogen gas leak is detected, a buzzer sounds, a light comes on, and a warning message is displayed on the multi-information display. → P.102

■ Brake system warning light (warning buzzer)

Warning light	Details/Actions
 (U.S.A.) or  (Red) (Canada)	Indicates that: <ul style="list-style-type: none"> ● The brake fluid level is low; or ● The brake system is malfunctioning → Immediately stop the vehicle in a safe place and contact your Toyota dealer. Continuing to drive the vehicle may be dangerous.

■ Brake system warning light (warning buzzer)

Warning light	Details/Actions
 (Yellow)	Indicates a malfunction in: <ul style="list-style-type: none"> ● The regenerative braking system; ● The electronically controlled brake system; or ● The parking brake system → Have the vehicle inspected by your Toyota dealer immediately.

■ High coolant temperature warning light

Warning light	Details/Actions
 (Red)	Indicates that the coolant temperature is too high → Immediately stop the vehicle in a safe place. Handling method (→P.652)

■ Fuel cell system overheat warning light* (warning buzzer)

Warning light	Details/Actions
	Indicates the fuel cell system has overheated → Stop the vehicle in a safe place. Handling method (→P.652)

*: This light illuminates on the multi-information display with a message.

■ Charging system warning light* (warning buzzer)

Warning light	Details/Actions
	Indicates a malfunction in the vehicle's charging system → Immediately stop the vehicle in a safe place and contact your Toyota dealer.

*: This light illuminates on the multi-information display with a message.

■ SRS warning light

Warning light	Details/Actions
	Indicates a malfunction in: ● The SRS airbag system; ● The front passenger occupant classification system; or ● The seat belt pretensioner system → Have the vehicle inspected by your Toyota dealer immediately.

■ Pop Up Hood warning light

Warning light	Details/Actions
	Indicates that the Pop Up Hood system has operated → The Pop Up Hood system cannot be reused once it has operated. Have it replaced by your Toyota dealer. Indicates a malfunction in the Pop Up Hood system → Have the vehicle inspected by your Toyota dealer immediately.

■ ABS warning light

Warning light	Details/Actions
 (U.S.A.) or  (Canada)	Indicates a malfunction in: <ul style="list-style-type: none"> ● The ABS; or ● The brake assist system → Have the vehicle inspected by your Toyota dealer immediately.

■ Electric power steering system warning light (warning buzzer)

Warning light	Details/Actions
 (Red) or  (Yellow)	Indicates a malfunction in the EPS (Electric Power Steering) system → Have the vehicle inspected by your Toyota dealer immediately.

■ PCS warning light (warning buzzer)

Warning light	Details/Actions
	<p>▶ Vehicles without Toyota Teammate Advanced Drive Indicates a malfunction in the PCS (Pre-Collision System). → Follow the instructions displayed on the multi-information display.</p> <p>If the PCS (Pre-Collision System) or VSC (Vehicle Stability Control) system is disabled, the PCS warning light will illuminate.</p> <p>▶ Vehicles with Toyota Teammate Advanced Drive. When a buzzer sounds simultaneously: Indicates a malfunction has occurred in the PCS (Pre-Collision System). → Have the vehicle inspected by your Toyota dealer immediately.</p> <p>When a buzzer does not sound: The PCS (Pre-Collision System) has become temporarily unavailable, corrective action may be necessary. → Follow the instructions displayed on the multi-information display. (→P.627)</p> <p>If the PCS (Pre-Collision System) or VSC (Vehicle Stability Control) system is disabled, the PCS warning light will illuminate. → P.466</p>

■ LDA indicator (warning buzzer)*

Warning light	Details/Actions
	<p>Indicates a malfunction in the LDA (Lane Departure Alert). → Follow the instructions displayed on the multi-information display.</p>

*: Vehicles without Toyota Teammate Advanced Drive.

■ **LTA indicator (warning buzzer)**

Warning light	Details/Actions
 (Yellow) (*1)	Indicates a malfunction in the LTA (Lane Tracing Assist) → Follow the instructions displayed on the multi-information display.
 (Yellow) (*2)	

*1: Vehicles without Toyota Teammate Advanced Drive.

*2: Vehicles with Toyota Teammate Advanced Drive.

■ **PDA indicator (warning buzzer)***

Warning light	Details/Actions
 (Yellow)	Indicates a malfunction in the PDA (Proactive Driving Assist). → Follow the instructions displayed on the multi-information display.

*: Vehicles without Toyota Teammate Advanced Drive.

■ **Driving assist information indicator***

Warning light	Details/Actions
	Indicates either of the following systems may be malfunctioning. ● PCS (Pre-Collision System) ● LDA (Lane Departure Alert) → Follow the instructions displayed on the multi-information display. Indicates one of the following systems is malfunctioning or disabled. ● PKSB (Parking Support Brake) (if equipped) ● RCD (Rear Camera Detection) (if equipped) ● BSM (Blind Spot Monitor) ● RCTA (Rear Cross Traffic Alert) ● Safe Exit Assist → Follow the instructions displayed on the multi-information display.

*: Vehicles without Toyota Teammate Advanced Drive.

■ **Dynamic radar cruise control indicator (warning buzzer)***

Warning light	Details/Actions
 (Yellow)	Indicates a malfunction in the dynamic radar cruise control. → Follow the instructions displayed on the multi-information display.

*: Vehicles without Toyota Teammate Advanced Drive.

■ **Cruise control indicator (warning buzzer)***

Warning light	Details/Actions
 (Yellow)	Indicates a malfunction in the cruise control. → Follow the instructions displayed on the multi-information display.

*: Vehicles without Toyota Teammate Advanced Drive.

■ **Intuitive parking assist OFF indicator (warning buzzer)**

Warning light	Details/Actions
 (If equipped)	When a buzzer sounds: Indicates a malfunction in the intuitive parking assist function → Have the vehicle inspected by your Toyota dealer immediately. When a buzzer does not sounds: Indicates that the system is temporarily unavailable, possibly due to a sensor being dirty or covered with ice, etc. → Follow the instructions displayed on the multi-information display. (→P.356, 623)

■ PKSB OFF indicator (warning buzzer)*

Warning light	Details/Actions
 (If equipped)	<p>When a buzzer sounds: Indicates a malfunction in the PKSB (Parking Support Brake) system → Have the vehicle inspected by your Toyota dealer immediately.</p> <p>When a buzzer does not sound: Indicates that the system is temporarily unavailable, possibly due to a sensor being dirty or covered with ice, etc. → Follow the instructions displayed on the multi-information display. (→P.393)</p>

*: Vehicles with Toyota Teammate Advanced Drive.

■ RCTA OFF indicator (warning buzzer)*

Warning light	Details/Actions
 (Flashes)	<p>Indicates a malfunction in the RCTA (Rear Cross Traffic Alert) function → Have the vehicle inspected by your Toyota dealer immediately.</p> <p>Indicates that the rear bumper around the radar sensor is covered with dirt, etc. (→P.331) → Follow the instructions displayed on the multi-information display. (→P.371)</p>

*: Vehicles with Toyota Teammate Advanced Drive.

■ **RCD OFF indicator (warning buzzer)***

Warning light	Details/Actions
 (Flashes or illuminates) (If equipped)	When a buzzer sounds: Indicates a malfunction in the RCD (Rear Camera Detection) function → Have the vehicle inspected by your Toyota dealer immediately. When a buzzer does not sound: Indicates that the function temporarily cannot be used due to the camera being dirty, etc. → Follow the instructions displayed on the multi-information display. (→P.382)

*: Vehicles with Toyota Teammate Advanced Drive.

■ **Slip indicator light**

Warning light	Details/Actions
	Indicates a malfunction in: ● The VSC system; ● The TRAC system; or ● The hill-start assist control system → Have the vehicle inspected by your Toyota dealer immediately.

■ **Inappropriate pedal operation warning light* (warning buzzer)**

Warning light	Details/Actions
	When a buzzer sounds: ● Brake Override System is malfunctioning ● Drive-Start Control is malfunctioning ● Drive-Start Control is operating ● PKSB (Parking Support Brake) is operating → Follow the instructions displayed on the multi-information display. When a buzzer does not sound: Brake Override System is operating. → Release the accelerator pedal and depress the brake pedal.

*: This light illuminates on the multi-information display with a message.

■ Brake hold operated indicator (warning buzzer)

Warning light	Details/Actions
 (Flashes)	Indicates a malfunction in the brake hold system → Have the vehicle inspected by your Toyota dealer immediately.

■ Parking brake indicator (warning buzzer)

Warning light	Details/Actions
 (Flashes) (U.S.A.) or  (Flashes) (Canada)	It is possible that the parking brake is not fully engaged or released. → Operate the parking brake switch once again. This light comes on when the parking brake is not released. If the light turns off after the parking brake is fully released, the system is operating normally.

■ Tire pressure warning light

Warning light	Details/Actions
	When the light comes on after blinking for approximately 1 minute: Malfunction in the tire pressure warning system → Have the system checked by your Toyota dealer. When the light comes on: Low tire inflation pressure such as <ul style="list-style-type: none"> ● Natural causes ● Flat tire → Immediately stop the vehicle in a safe place. Handling method (→P.620)

■ Low fuel level warning light

Warning light	Details/Actions
	Indicated the remain fuel is approximately 12% or less → Refuel the vehicle.

■ **Driver’s and front passenger’s seat belt reminder light (warning buzzer)***

Warning light	Details/Actions
	Warns the driver and/or front passenger to fasten their seat belts → Fasten the seat belt. If the front passenger’s seat is occupied, the front passenger’s seat belt also needs to be fastened to make the warning light (warning buzzer) turn off.

*: Driver’s seat belt warning buzzer:

The driver’s seat belt warning buzzer sounds to alert the driver that his or her seat belt is not fastened. Once the power switch is turned to ON, the buzzer sounds. If the seat belt is still unfastened, the buzzer sounds intermittently for a certain period of time after the vehicle reaches a certain speed.

Front passenger’s seat belt warning buzzer:

The front passenger’s seat belt warning buzzer sounds to alert the front passenger that his or her seat belt is not fastened. If the seat belt is unfastened, the buzzer sounds intermittently for a certain period of time after the vehicle reaches a certain speed.

■ **Rear passengers’ seat belt reminder lights (warning buzzer)***

Warning light	Details/Actions
	Warns the rear passengers to fasten their seat belts → Fasten the seat belt.

*: Rear passengers’ seat belt warning buzzer:

The rear passengers’ seat belt warning buzzer sounds to alert the rear passenger that his or her seat belt is not fastened. If the seat belt is unfastened, the buzzer sounds intermittently for a certain period of time, after the seat belt is fastened and unfastened and the vehicle reaches a certain speed.

■ **Warning buzzer**

In some cases, the buzzer may not be heard due to being in a noisy location or audio sound.

■ **Front passenger detection sensor, seat belt reminder and warning buzzer**

● If luggage is placed on the front passenger seat, the front passen-

ger detection sensor may cause the warning light to flash and the warning buzzer to sound even if a passenger is not sitting in the seat.

● If a cushion is placed on the seat, the sensor may not detect a passenger, and the warning light may not operate properly.

620 8-2. Steps to take in an emergency

■ SRS warning light

This warning light indicates problems with the following:

- Airbag sensor assembly
- Front impact sensors
- Side impact sensors (front door)
- Side impact sensors (rear)
- Driver's seat position sensor
- Driver's seat belt buckle switch
- Front passenger's seat belt buckle switch
- SRS warning light
- "AIR BAG ON" indicator light
- "AIR BAG OFF" indicator light
- SRS airbags
- SRS system related wiring harnesses and power sources (→P.38)

■ Electric power steering system warning light (warning buzzer)

When the 12-volt battery charge becomes insufficient or the voltage temporarily drops, the electric power steering system warning light may come on and the warning buzzer may sound.

■ When the tire pressure warning light comes on

Inspect the tires to check if a tire is punctured.

If a tire is punctured: →P.629

If none of the tires are punctured: Turn the power switch off then turn it to ON. Check if the tire pressure warning light comes on or blinks.

- ▶ If the tire pressure warning light blinks for approximately 1 minute then stays on

There may be a malfunction in the tire pressure warning system. Have the vehicle inspected by your Toyota dealer immediately.

- ▶ If the tire pressure warning light comes on
 - 1 After the temperature of the tires has lowered sufficiently, check the inflation pressure of each tire and adjust them to the specified level.
 - 2 If the warning light does not turn off even after several minutes have elapsed, check that the inflation pressure of each tire is at the specified level and perform initialization. (→P.565, 576)

■ The tire pressure warning light may come on due to natural causes

The tire pressure warning light may come on due to natural causes such as natural air leaks and tire inflation pressure changes caused by temperature. In this case, adjusting the tire inflation pressure will turn off the warning light (after a few minutes).

■ Conditions that the tire pressure warning system may not function properly

→P.562, 575

WARNING

■ If both the ABS and the brake system warning lights remain on

Stop your vehicle in a safe place immediately and contact your Toyota dealer.

The vehicle will become extremely unstable during braking, and the ABS system may fail, which could cause an accident resulting in death or serious injury.

⚠ WARNING**■ When the electric power steering system warning light comes on**

When the light comes on yellow, the assist to the power steering is restricted. When the light comes on red, the assist to the power steering is lost and handling operations of the steering wheel become extremely heavy. When steering wheel operations are heavier than usual, grip the steering wheel firmly and operate it using more force than usual.

■ If the tire pressure warning light comes on

Be sure to observe the following precautions. Failure to do so could cause a loss of vehicle control and result in death or serious injury.

- Check and adjust the tire inflation pressure immediately.
- If the tire pressure warning light comes on even after tire inflation pressure adjustment, it is probable that you have a flat tire. Have the flat tire replaced by the nearest Toyota dealer.
- Avoid abrupt maneuvering and braking. If the vehicle tires deteriorate, you could lose control of the steering wheel or the brakes.

■ If a blowout or sudden air leakage should occur

The tire pressure warning system may not activate immediately.

■ Maintenance of the tires

Each tire, including the spare (if provided), should be checked monthly when cold and inflated to the inflation pressure recommended by the vehicle manufacturer on the vehicle placard or tire inflation pressure label (tire and load information label). (If your vehicle has tires of a different size than the size indicated on the vehicle placard or tire inflation pressure label [tire and load information label], you should determine the proper tire inflation pressure for those tires.)

As an added safety feature, your vehicle has been equipped with a tire pressure monitoring system (TPMS-tire pressure warning system) that illuminates a low tire pressure telltale (tire pressure warning light) when one or more of your tires is significantly under-inflated. Accordingly, when the low tire pressure telltale (tire pressure warning light) illuminates, you should stop and check your tires as soon as possible, and inflate them to the proper pressure. Driving on a significantly under-inflated tire causes the tire to overheat and can lead to tire failure. Under-inflation also reduces fuel efficiency and tire tread life, and may affect the vehicle's handling and stopping ability.

Please note that the TPMS (tire pressure warning system) is not a substitute for proper tire maintenance, and it is the driver's responsibility to maintain correct tire pressure, even if under-inflation has not reached the level to trigger illumination of the TPMS low tire pressure telltale (tire pressure warning light).

 **WARNING**

Your vehicle has also been equipped with a TPMS (tire pressure warning system) malfunction indicator to indicate when the system is not operating properly. The TPMS (tire pressure warning system) malfunction indicator is combined with the low tire pressure telltale (tire pressure warning light). When the system detects a malfunction, the telltale will flash for approximately one minute and then remain continuously illuminated. This sequence will continue upon subsequent vehicle start-ups as long as the malfunction exists. When the malfunction indicator is illuminated, the system may not be able to detect or signal low tire pressure as intended.

TPMS (tire pressure warning system) malfunctions may occur for a variety of reasons, including the installation of replacement or alternate tires or wheels on the vehicle that prevent the TPMS (tire pressure warning system) from functioning properly. Always check the TPMS (tire pressure warning system) malfunction telltale after replacing one or more tires or wheels on your vehicle to ensure that the replacement or alternate tires and wheels allow the TPMS (tire pressure warning system) to continue to function properly.

 **NOTICE**

■ To ensure the tire pressure warning system operates properly

Do not install tires with different specifications or makers, as the tire pressure warning system may not operate properly.

If a warning message is displayed

The multi-information display shows warnings for system malfunctions and incorrectly performed operations, and messages that indicate a need for maintenance. When a message is displayed, perform the appropriate corrective action for the message.

If a warning message is displayed again after the appropriate actions have been performed, contact your Toyota dealer.

Additionally, if a warning light comes on or flashes at the same time that a warning message is displayed, take the appropriate corrective action for the warning light. (→P.610)

■ Warning messages

The warning messages explained below may differ from the actual messages according to operation conditions and vehicle specifications.

■ Warning buzzer

A buzzer may sound when a message is displayed.

In some cases, the buzzer may not be heard due to being in a noisy location or audio sound.

■ **If “FCV System Stopped Steering Power Low” is displayed**

This message is displayed if the fuel cell system is stopped while driving. When steering wheel operations are heavier than usual, grip the steering wheel firmly and operate it using more force than usual.

■ **If “FCV System High Temp. FCV Power Reduced” or “FCV Power Reduced Due to Excessive Acceleration” is displayed**

- 1 Lower the speed while check the safety, and run the vehicle like this for several minutes.
- 2 If the message goes off, the vehicle can be driven as is, since it temporarily overheated.

This message may be displayed when driving under severe operating conditions. (For example, when driving up a long steep hill.)

■ **If “FCV Power Significantly Reduced” is displayed**

The output power of the fuel cell system is greatly restrained. If it is displayed frequently, contact your Toyota dealer.

■ **If “FCV System Shutdown Due to Freezing Stop in a Safe Place See Owner’s Manual” is displayed**

The fuel cell system is frozen and can not be started. Contact your Toyota dealer.

■ **If “Stop Vehicle in a Safe Place Push P Switch” is displayed**

There may be a malfunction in the fuel cell system or the shift position may be shifted to N for a long time. Immediately stop the vehicle and contact your Toyota dealer.

■ **If “Shift is in N Release Accelerator Before Shifting” is displayed**

The accelerator pedal has been depressed when the shift position is in N.

Release the accelerator pedal and shift the shift position to D or R.

■ **If “Press brake when vehicle is stopped FCV system may overheat” is displayed**

The message may be displayed when the accelerator pedal is depressed to hold the vehicle while the vehicle is stopped on an incline, etc. The fuel cell system may overheat. Release the accelerator pedal and depress the brake pedal.

■ **If “Auto Power OFF to Conserve Battery” is displayed**

Power was turned off due to the automatic power off function. Next time when starting the fuel cell system, operate the fuel cell system for approximately 5 minutes to recharge the 12-volt battery.

■ **If “Headlight System Malfunction Visit Your Dealer” is displayed**

The following systems may be malfunctioning. Have the vehicle inspected by your Toyota dealer immediately.

- The LED headlight system
- The automatic headlight leveling system (if equipped)
- AHB (Automatic High Beam)

■ **If “Parking Assist Unavailable Sensor Blocked” is displayed**

A sensor may be covered with water drops, ice, snow, dirt, etc. Remove the water drops, ice, snow, dirt, etc., from the sensor to return the system to normal.

Also, due to ice forming on a sensor at low temperatures, a warning message may be displayed or the sensor may not be able to detect an object. Once the ice melts, the system will return to normal.

If a sensor is dirty, the position of the dirty sensor will be shown on the display.

If an abnormality is displayed even

though there are no water drops, ice, snow or dirt, the sensor may be operating abnormally. Have the vehicle inspected by your Toyota dealer.

■ **If “Parking Assist Unavailable Low Visibility See Owner’s Manual” is displayed (vehicles without Toyota Teammate Advanced Drive)**

Indicates one of the following systems is disabled.

-  RCD (Rear Camera Detection) (if equipped)
-  PKSB (Parking Support Brake) (if equipped)

Remove any dirt or foreign matter from the rear camera.

■ **If “System Malfunction Visit Your Dealer” is displayed (vehicles without Toyota Teammate Advanced Drive)**

Indicates one of the following systems is disabled.

- PCS (Pre-Collision System)
- LDA (Lane Departure Alert)
- LTA (Lane Tracing Assist)
-  LCA (Lane Change Assist)
- AHB (Automatic High Beam)
- Dynamic radar cruise control
-  RSA (Road Sign Assist)
-  PDA (Proactive Driving Assist)
-  BSM (Blind Spot Monitor)
-  RCTA (Rear Cross Traffic Alert)
-  Safe Exit Assist (if equipped)
-  Intuitive Parking Assist (if equipped)

-  PKSB (Parking Support Brake) (if equipped)

-  RCD (Rear Camera Detection) (if equipped)

Have the vehicle inspected by your Toyota dealer.

■ **If “System Stopped See Owner’s Manual” is displayed (vehicles without Toyota Teammate Advanced Drive)**

Indicates one of the following systems is disabled.

- PCS (Pre-Collision System)
 - LDA (Lane Departure Alert)
 - LTA (Lane Tracing Assist)
 -  LCA (Lane Change Assist)
 - AHB (Automatic High Beam)
 - Dynamic radar cruise control
 -  RSA (Road Sign Assist)
 -  PDA (Proactive Driving Assist)
 -  BSM (Blind Spot Monitor)
 -  RCTA (Rear Cross Traffic Alert)
 -  Safe Exit Assist
 -  Intuitive Parking Assist (if equipped)
 -  PKSB (Parking Support Brake) (if equipped)
 -  RCD (Rear Camera Detection) (if equipped)
- Follow the following correction methods.
- Check the voltage of the 12-volt battery.
 - Check the sensors that the Toyota Safety Sense 3.0 uses for foreign

matter covering them. Remove them if any. (→P.260)

- Vehicle with RCD (Rear Camera Detection): Check if the trunk is open.

Indicates the sensors may not be operating properly.(→P.264, 334, 347, 368, 378, 396, 402, 406)

- Check the rear bumper around the sensors (→P.331) used by the BSM, RCTA, Safe Exit Assist for foreign matter covering them. Remove them if any.
- Check the sensors including camera sensors used by the Intuitive Parking Assist (if equipped) and PKSB (if equipped) for foreign matter covering them. Remove them if any.

When problems are solved and the sensors are operational, this indication may disappear by itself.

■ **If “System Stopped Front Camera Low Visibility See Owner’s Manual” is displayed (vehicles without Toyota Teammate Advanced Drive)**

Indicates one of the following systems is disabled.

- PCS (Pre-Collision System)
- LDA (Lane Departure Alert)
- LTA (Lane Tracing Assist)
-  LCA (Lane Change Assist)
- AHB (Automatic High Beam)
- Dynamic radar cruise control
-  RSA (Road Sign Assist)
-  PDA (Proactive Driving Assist)

Follow the following correction methods.

- Using the windshield wipers, remove the dirt or foreign matter from the windshield.
- Using the air conditioning system,

defog the windshield.

- Close the hood, remove any stickers, etc. to clear the obstruction in front of the front camera.

■ **If “System Stopped Front Camera Out of Temperature Range Wait until Normal Temperature” is displayed (vehicles without Toyota Teammate Advanced Drive)**

Indicates one of the following systems is disabled.

- PCS (Pre-Collision System)
- LDA (Lane Departure Alert)
- LTA (Lane Tracing Assist)
-  LCA (Lane Change Assist)
- AHB (Automatic High Beam)
- Dynamic radar cruise control
-  RSA (Road Sign Assist)
-  PDA (Proactive Driving Assist)

Follow the following correction methods.

- If the front camera is hot, such as after the vehicle is parked in the sun, use the air conditioning system to decrease the temperature around the front camera
- If a sunshade was used when the vehicle was parked, depending on its type, the sunlight reflected from the surface of the sunshade may cause the temperature of the front camera to become excessively high
- If the front camera is cold, such as after the vehicle is parked in an extremely cold environment, use the air conditioning system to increase the temperature around the front camera

■ If “System Stopped Front Radar Sensor Blocked Clean Radar Sensor” is displayed (vehicles without Toyota Teammate Advanced Drive)

Indicates one of the following systems is disabled.

- PCS (Pre-Collision System)
- LDA (Lane Departure Alert)
- LTA (Lane Tracing Assist)
-  LCA (Lane Change Assist)
- AHB (Automatic High Beam)
- Dynamic radar cruise control
-  PDA (Proactive Driving Assist)

Follow the following correction methods.

- Check if there is any foreign matter attached to the radar sensor or radar sensor cover and clean them if necessary (→P.261)
- This message may be displayed when driving in an open area with few nearby vehicles or structures, such as a desert, grasslands, suburbs, etc.

The message may be cleared by driving the vehicle in an area with structures, vehicles, etc., nearby.

■ If “System Stopped Front Radar Sensor Out of Temperature Range Wait until Normal Temperature” is displayed (vehicles without Toyota Teammate Advanced Drive)

Indicates one of the following systems is disabled.

- PCS (Pre-Collision System)
- LDA (Lane Departure Alert)
- LTA (Lane Tracing Assist)
-  LCA (Lane Change Assist)
- AHB (Automatic High Beam)
- Dynamic radar cruise control

-  PDA (Proactive Driving Assist)

The temperature of the radar sensor is outside of the operating range. Wait for the temperature to become appropriate.

■ If “System Stopped Front Radar In Self Calibration See Owner’s Manual” is displayed (vehicles without Toyota Teammate Advanced Drive)

Indicates one of the following systems is disabled.

- PCS (Pre-Collision System)
- LDA (Lane Departure Alert)
- LTA (Lane Tracing Assist)
-  LCA (Lane Change Assist)
- AHB (Automatic High Beam)
- Dynamic radar cruise control
-  PDA (Proactive Driving Assist)

Follow the following correction methods.

- Check if there is any foreign matter attached to the radar sensor or radar sensor cover and clean them if necessary (→P.261)
- The radar sensor may be misaligned and will be adjusted automatically while driving. Continue driving for a while.

■ If “Unavailable Activation Condition not Satisfied See Owner’s Manual” is displayed (vehicles without Toyota Teammate Advanced Drive)

 The LCA function cannot be used as the operating conditions have not been met. (→P.286)
Operate the turn signal lever again after all of the operating conditions are met.

■ **If “Cruise Control Unavailable See Owner’s Manual” is displayed (vehicles without Toyota Teammate Advanced Drive)**

Indicates one of the following systems is disabled.

- Dynamic radar cruise control
- Cruise control

A message is displayed when the driving assist switch is pushed repeatedly.

Press the driving assist switch quickly and firmly.

■ **If “Driver Monitor Out of Temperature Range Wait until Normal Temperature” is displayed (Vehicles without Toyota Teammate Advanced Drive)**

Indicates one of the following systems is disabled.

- Driver monitor
- Traffic Jam Assist

The temperature of the driver monitor camera is outside of the operating range. Wait for the temperature to become appropriate.

■ **If “Driver Monitor Unavailable See Owner’s Manual” is displayed (Vehicles without Toyota Teammate Advanced Drive)**

The lens of the driver monitor camera may be dirty.

When there is dirt on the camera lens, clean it with a dry, soft cloth so as to not damage it.

■ **If “Radar Cruise Control Unavailable See Owner’s Manual” is displayed (vehicles with Toyota Teammate Advanced Drive)**

The dynamic radar cruise control with full-speed range system is suspended temporarily or until the problem shown in the message is resolved. (Causes and coping methods: refer to “Toyota Teammate Advanced Drive OWNER’S MAN-

UAL”.)

■ **If “Radar Cruise Control Unavailable” is displayed (vehicles with Toyota Teammate Advanced Drive)**

The dynamic radar cruise control with full-speed range system cannot be used temporarily. Use the system when it becomes available again.

■ **If a message that indicates the malfunction of front camera is displayed (vehicles with Toyota Teammate Advanced Drive)**

The following systems may be suspended until the problem shown in the message is resolved. (→P.610)

- PCS (Pre-Collision system)
- LTA (Lane Tracing Assist)
- AHB (Automatic High Beam)
- RSA (Road Sign Assist)
- Dynamic radar cruise control with full-speed range

■ **If a message that indicates the malfunction of radar sensor is displayed (vehicles with Toyota Teammate Advanced Drive)**

The following systems may be suspended until the problem shown in the message is resolved. (→P.610)

- PCS (Pre-Collision system)
- LTA (Lane Tracing Assist)
- Dynamic radar cruise control with full-speed range

■ **If a message about an operation is shown**

- If a message about an operation of the accelerator pedal or brake pedal is shown

A message about an operation of the brake pedal may be shown while the driving assist systems such as PCS (Pre-Collision System) or the dynamic radar cruise control is operating. If a warning message is shown, be sure to decelerate the

vehicle or follow the instruction shown on the multi-information display.

- A warning message is shown when Brake Override System operates. (→P.209)
- A warning message is shown when Drive-Start Control operates (→P.214). Follow the instructions on the multi-information display.

■ **If “Shift System Malfunction Shifting Unavailable Drive to a Safe Place and Stop” or “Shift System Malfunction Driving Unavailable” is displayed**

There is a malfunction in the shift control system. Have the vehicle inspected by your Toyota dealer immediately.

■ **If a message that indicates the need for the shift lever operation is displayed**

To prevent the shift lever from being operated incorrectly or the vehicle from moving unexpectedly, a message that requires shifting the shift position may be displayed on the multi-information display. In that case, follow the instruction of the message and shift the shift position.

■ **If a message regarding Advanced Drive is displayed (vehicles with Toyota Teammate Advanced Drive)**

Refer to “Toyota Teammate Advanced Drive OWNER’S MANUAL” at Toyota.com for details.

■ **If a message that indicates the need for visiting your Toyota dealer is displayed**

The system or part shown on the multi-information display is malfunctioning. Have the vehicle inspected by your Toyota dealer immediately.

■ **If a message that indicates the need for referring to Owner’s Manual is displayed**

- If any of the following messages are shown on the multi-information display, it may indicate a malfunction. Have the vehicle inspected by your Toyota dealer immediately.
 - “Smart Key System Malfunction See Owner’s Manual”
 - “P Switch Malfunction Apply Parking Brake Securely When Parking See Owner’s Manual”
 - “Shift System Malfunction Apply Parking Brake Securely When Parking See Owner’s Manual”
 - “Shift System Unavailable Apply Parking Brake Securely When Parking See Owner’s Manual”
 - “Shift System Malfunction See Owner’s Manual”
 - “Shift System Malfunction Stop in a Safe Place See Owner’s Manual”
 - “Battery Low Shifting Unavailable See Owner’s Manual”
 - “FCV system malfunction”
 - “Traction battery system malfunction”
 - “Accelerator System Malfunction”
- If any of the following messages are shown on the multi-information display, it may indicate a malfunction. Immediately stop the vehicle and contact your Toyota dealer.
 - “Braking Power Low Stop in a Safe Place See Owner’s Manual”
 - “FCV System Shutdown Due to Hydrogen Leakage Stop in a Safe Place See Owner’s Manual”
- If “FCV system stopped” is shown on the multi-information display, the vehicle may have run out of fuel. Stop the vehicle in a safe place and, if the fuel level is low, refuel the vehicle. (→P.95)
- If “Low Auxiliary Battery See Owner’s Manual” is shown,
 - When the display goes off after several seconds (displays for

about 6 seconds): Maintain the fuel cell system operation for more than 15 minutes and charge the 12-volt battery.

- When the display does not go off: Start up the fuel cell system using the procedures: →P.647
- If “Maintenance Required for Traction Battery Cooling Parts See Owner’s Manual” is shown, the filters may be clogged, the air intake vents may be blocked, or there may be a gap in the duct. Therefore, perform the following correction procedure.
- Cleaning the traction battery air intake vents (→P.589)
If the warning message is shown even if the vents are cleaned, have the vehicle inspected by your Toyota dealer.
- **If “Ion Filter Maintenance Required Visit Your Dealer” is displayed**

Ion filter replacement is necessary. Contact your Toyota dealer.

NOTICE

■ **If “Low Auxiliary Battery See Owner’s Manual” is displayed frequently**

The 12-volt battery may have deteriorated. As the battery may discharge in this state when left unattended, have the battery inspected by your Toyota dealer.

■ **If “Maintenance Required For Traction Battery At Your Dealer” is displayed**

This message indicates that the traction battery may require inspection or replacement. Have the vehicle inspected by your Toyota dealer immediately. Do not continue driving the vehicle, as the fuel cell system may become not able to be started again.

If you have a flat tire

Your vehicle is not equipped with a spare tire, but instead is equipped with an emergency tire puncture repair kit.

A puncture caused by a nail or screw passing through the tire tread can be repaired temporarily using the emergency tire puncture repair kit. (The kit contains a bottle of sealant. The sealant can be used only once to temporarily repair one tire without removing the nail or screw from the tire.) Depending on the damage, this kit cannot be used to repair the tire. (→P.630)

After temporarily repairing the tire with the kit, have the tire repaired or replaced by your Toyota dealer. Repairs conducted using the emergency tire puncture repair kit are only a temporary measure. Have the tire repaired and replaced as soon as possible.

WARNING

■ **If you have a flat tire**

Do not continue driving with a flat tire.

Driving even a short distance with a flat tire can damage the tire and the wheel beyond repair, which could result in an accident.

Before repairing the tire

- Stop the vehicle in a safe place on a hard, flat surface.
- Set the parking brake.
- Shift the shift position to P.
- Stop the fuel cell system.
- Turn on the emergency flashers. (→P.602)
- Check the degree of the tire damage.
- When the cut or damage to the tread is 0.16 in. (4 mm) long or more
- When the wheel is damaged
- When two or more tires have been punctured
- When more than 2 sharp objects such as nails or screws have passed through the tread on a single tire
- When the sealant has expired

Do not remove the nail or screw from the tire. Removing the object may widen the opening and make emergency repair with the repair kit impossible.

■ **A flat tire that cannot be repaired with the emergency tire puncture repair kit**

In the following cases, the tire cannot be repaired with the emergency tire puncture repair kit. Contact your Toyota dealer.

- When the tire is damaged due to driving without sufficient air pressure
- When there are any cracks or damage at any location on the tire, such as on the side wall, except the tread
- When the tire is visibly separated from the wheel

Location of the emergency tire puncture repair kit and tools

► Type A

A Emergency tire puncture repair kit

B Towing eyelet

► Type B

A Emergency tire puncture repair kit

B Towing eyelet

Emergency tire puncture repair kit components

► Bottle

A Sticker

► Compressor

- A** Air pressure gauge
- B** Compressor switch
- C** Power plug
- D** Hose
- E** Air release cap

Note for checking the emergency tire puncture repair kit

Check the sealant expiry date occasionally. The expiry date is shown on the bottle. Do not use sealant whose expiry date has already passed. Otherwise, repairs conducted using the emergency tire puncture repair kit may not be performed properly.

Emergency tire puncture repair kit

- The emergency tire puncture repair kit is for filling the car tire with air.
- The sealant has a limited life span. The expiry date is marked on the bottle. The sealant should be replaced before the expiry date. Contact your Toyota dealer for replacement.
- The sealant stored in the emergency tire puncture repair kit can be used only once to temporarily repair a single tire. If the sealant has been used and needs to be replaced, purchase a new bottle at your Toyota dealer. The compressor is reusable.
- The sealant can be used when the outside temperature is from -40°F (-40°C) to 140°F (60°C).
- The kit is exclusively designed for size and type of tires originally installed on your vehicle. Do not use it for tires that a different size than the original ones, or for any other purposes.
- If the sealant gets on your clothes, it may stain.

- If the sealant adheres to a wheel or the surface of the vehicle body, the stain may not be removable if it is not cleaned at once. Immediately wipe away the sealant with a wet cloth.
- During operation of the repair kit, a loud operation noise is produced. This does not indicate a malfunction.
- Do not use to check or to adjust the tire pressure.

WARNING

Caution while driving

- Store the repair kit in the luggage compartment. Injuries may result in the event of an accident or sudden braking.
- The repair kit is exclusively only for your vehicle. Do not use repair kit on other vehicles, which could lead to an accident causing death or serious injury.
- Do not use repair kit for tires that are different size than the original ones, or for any other purpose. If the tires have not been completely repaired, it could lead to an accident causing death or serious injury.

Precautions for use of the sealant

- Ingesting the sealant is hazardous to your health. If you ingest sealant, consume as much water as possible, and then immediately consult a doctor.
- If sealant gets in eyes or adheres to skin, immediately wash it off with water. If discomfort persists, consult a doctor.

Taking out the emergency tire puncture repair kit

- 1 Remove the luggage mat. (→P.496)
- 2 Remove the band.

- 3 Take out the emergency tire puncture repair kit. (→P.631)

Emergency repair method

- 1 Remove the hose and take out the power plug from the compressor.

- 2 Connect the bottle to the compressor.

Insert and connect the bottle straight into the compressor as shown in the illustration, and check that the claws of the bottle are concealed in the holes.

- 3 Connect the hose to the bottle.

As shown in the illustration, make

sure the hose is connected securely to the bottle.

4 Remove the valve cap from the valve of the punctured tire.

5 Extend the hose. Remove the air release cap from the hose.

You will use the air release cap again. Therefore keep it in a safe

place.

6 Connect the hose to the valve.

Screw the end of the hose clockwise as far as possible.

7 Make sure that the compressor switch is off.

- 8 Connect the power plug to the power outlet socket. (→P.515)

- 9 Attach the sticker provided with the tire puncture repair kit to a position easily seen from the driver's seat.

- 10 Check the specified tire inflation pressure.

Tire inflation pressure is specified on the label on the driver's side door frame as shown. (→P.663)

- 11 Start the fuel cell system. (→P.219)

- 12 To inject the sealant and inflate the tire, turn the compressor switch on.

- 13 Inflate the tire until the specified air pressure is reached.

- A** The sealant will be injected and the pressure will spike to 300 kPa (3.0 kgf/cm² or bar, 44 psi) or 400 kPa (4.0 kgf/cm² or bar, 58 psi), then gradually decrease.

- B** The air pressure gauge will display the actual tire inflation

pressure about 1 to 5 minutes after the switch is turned on.

- Turn the compressor switch off and then check the tire inflation pressure. Being careful not to over inflate, check and repeat the inflation procedure until the specified tire inflation pressure is reached.
 - The tire can be inflated for about 5 to 20 minutes (depending on the outside temperature). If the tire inflation pressure is still lower than the specified point after inflation for 25 minutes, the tire is too damaged to be repaired. Turn the compressor switch off and contact your Toyota dealer.
 - If the tire inflation pressure exceeds the specified air pressure, let out some air to adjust the tire inflation pressure. (→P.638, 663)
- 14 With the compressor switch off, pull out the power plug from the power outlet socket and then disconnect the hose from the valve on the tire.

Some sealant may leak when the hose is removed.

- 15 Install the valve cap onto the valve of the emergency repaired tire.
- 16 Attach the air release cap to the end of the hose.

If the air release cap is not attached, the sealant may leak and the vehicle may get dirty.

- 17 Temporarily store the bottle in the luggage compartment while it is connected to the compressor.
- 18 To spread the liquid sealant evenly within the tire, immediately drive safely for about 5 km (3 miles) below 80 km/h (50 mph).
- 19 After driving, stop your vehicle in a safe place on a hard, flat surface and reconnect the repair kit.

Remove the air release cap from the hose before reconnecting the hose.

- 20 Turn the compressor switch on and wait for several sec-

onds, then turn it off. Check the tire inflation pressure.

- A** If the tire inflation pressure is under 130 kPa (1.3 kgf/cm² or bar, 19 psi): The puncture cannot be repaired. Contact your Toyota dealer.
- B** If the tire inflation pressure is 130 kPa (1.3 kgf/cm² or bar, 19 psi) or higher, but less than the specified air pressure: Proceed to step 21.
- C** If the tire inflation pressure is the specified air pressure (→P.663): Proceed to step 22.

21 Turn the compressor switch on to inflate the tire until the specified air pressure is reached. Drive for about 5 km (3 miles) and then perform step 19.

22 Attach the air release cap to the end of the hose.

If the air release cap is not attached, the sealant may leak and

the vehicle may get dirty.

- 23 Store the bottle in the luggage compartment while it is connected to the compressor.
- 24 Taking precautions to avoid sudden braking, sudden acceleration and sharp turns, drive carefully at under 80 km/h (50 mph) to the nearest Toyota dealer that is less than 100 km (62 miles) away for tire repair or replacement.

When having the tire repaired or replaced, make sure to tell your Toyota dealer that the sealant is injected.

■ If the tire is inflated to more than the specified air pressure

- 1 Disconnect the hose from the valve.
- 2 Install the air release cap to the end of the hose and push the protrusion on the air release cap into the tire valve to let some air out.

- 3 Disconnect the hose from the valve, remove the air release cap from the hose and then reconnect the hose.
- 4 Turn the compressor switch on and wait for several seconds, and then turn it off. Check that the air pressure indicator shows the specified air pressure. (→P.663)

If the air pressure is under the designated pressure, turn the compressor switch on again and repeat the inflation procedure until the specified air pressure is reached.

■ The valve of a tire that has been repaired

After a tire is repaired with the emergency tire puncture repair kit, the valve should be replaced.

■ After a tire is repaired with the emergency tire puncture repair kit

- The tire pressure warning valve and transmitter should be replaced.
- Even if the tire inflation pressure is at the recommended level, the tire pressure warning light may come on/flash.

■ Note for checking the emergency tire puncture repair kit

Check the sealant expiry date occasionally.

The expiry date is shown on the bottle. Do not use sealant whose expiry date has already passed. Otherwise, repairs conducted using the emergency tire puncture repair kit may not be performed properly.

■ Emergency tire puncture repair kit

- The emergency tire puncture repair kit is for filling the car tire with air.
- The sealant has a limited life span. The expiry date is marked on the bottle. The sealant should be replaced before the expiry

date. Contact your Toyota dealer for replacement.

- The sealant stored in the emergency tire puncture repair kit can be used only once to temporarily repair a single tire. If the sealant in the bottle and other parts of the kit have been used and need to be replaced, contact your Toyota dealer.
- The compressor can be used repeatedly.
- The sealant can be used when the outside temperature is from -40°F (-40°C) to 140°F (60°C).
- The kit is exclusively designed for size and type of tires originally installed on your vehicle. Do not use it for tires that a different size than the original ones, or for any other purposes.
- If the sealant gets on your clothes, it may stain.
- If the sealant adheres to a wheel or the surface of the vehicle body, the stain may not be removable if it is not cleaned at once. Immediately wipe away the sealant with a wet cloth.
- During operation of the repair kit, a loud operation noise is produced. This does not indicate a malfunction.
- Do not use to check or to adjust the tire pressure.

⚠ WARNING

■ Do not drive the vehicle with a flat tire

Do not continue driving with a flat tire.

Driving even a short distance with a flat tire can damage the tire and the wheel beyond repair.

Driving with a flat tire may cause a circumferential groove on the side wall. In such a case, the tire may explode when using a repair kit.

 **WARNING**

■ **When fixing the flat tire**

- Stop your vehicle in a safe and flat area.
- Do not touch the wheels or the area around the brakes immediately after the vehicle has been driven. After the vehicle has been driven, the wheels and the area around the brakes may be extremely hot. Touching these areas with hands, feet or other body parts may result in burns.
- Connect the valve and hose securely with the tire installed on the vehicle. If the hose is not properly connected to the valve, air leakage may occur as sealant may be sprayed out.
- If the hose comes off the valve while inflating the tire, there is a risk that the hose will move abruptly due to air pressure.
- After inflation of the tire has completed, the sealant may splatter when the hose is disconnected or some air is let out of the tire.
- Follow the operation procedure to repair the tire. If the procedures not followed, the sealant may spray out.
- Keep back from the tire while it is being repaired, as there is a chance of it bursting while the repair operation is being performed. If you notice any cracks or deformation of the tire, turn off the compressor switch and stop the repair operation immediately.

- The repair kit may overheat if operated for a long period of time. Do not operate the repair kit continuously for more than 40 minutes.
- Parts of the repair kit become hot during operation. Be careful handling the repair kit during and after operation. Do not touch the metal part connecting the bottle and the compressor. It will be extremely hot.
- Do not attach the vehicle speed warning sticker to an area other than the one indicated. If the sticker is attached to an area where an SRS airbag is located, such as the pad of the steering wheel, it may prevent the SRS airbag from operating properly.

■ **Driving to spread the liquid sealant evenly**

Observe the following precautions to reduce the risk of accidents.

Failing to do so may result in a loss of vehicle control and cause death or serious injury.

- Drive the vehicle carefully at a low speed. Be especially careful when turning and cornering.
- If the vehicle does not drive straight or you feel a pull through the steering wheel, stop the vehicle and check the following.
 - Tire condition. The tire may have separated from the wheel.
 - Tire inflation pressure. If the tire inflation pressure is 19 psi (130 kPa, 1.3 kgf/cm² or bar) or less, the tire may be severely damaged.

NOTICE

■ When performing an emergency repair

- A tire should only be repaired with the emergency tire puncture repair kit if the damage is caused by a sharp object such as nail or screw passing through the tire tread.
Do not remove the sharp object from the tire. Removing the object may widen the opening and disable emergency repair with the repair kit.
 - The repair kit is not waterproof. Make sure that the repair kit is not exposed to water, such as when it is being used in the rain.
 - Do not put the repair kit directly onto dusty ground such as sand at the side of the road. If the repair kit vacuums up dust etc., a malfunction may occur.
- Precautions for the emergency tire puncture repair kit**
- The repair kit power source should be 12 V DC suitable for vehicle use. Do not connect the repair kit to any other source.
 - If fuel splatters on the repair kit, the repair kit may deteriorate. Take care not to allow fuel to contact it.
 - Place the repair kit in a storage to prevent it from being exposed to dirt or water.
 - Store the repair kit in the luggage compartment out of reach of children.

- Do not disassemble or modify the repair kit. Do not subject parts such as the air pressure indicator to impacts. This may cause a malfunction.

■ To avoid damage to the tire pressure warning valves and transmitters

When a tire is repaired with liquid sealants, the tire pressure warning valve and transmitter may not operate properly. If a liquid sealant is used, contact your Toyota dealer or other qualified service shop as soon as possible. After use of liquid sealant, make sure to replace the tire pressure warning valve and transmitter when repairing or replacing the tire. (→P.563, 576)

If the fuel cell system will not start

Reasons for the fuel cell system not starting vary depending on the situation. Check the following and perform the appropriate procedure:

The fuel cell system will not start even though the correct starting procedure is being followed. (→P.219)

One of the following may be the cause of the problem:

- The electronic key may not be functioning properly. (→P.644)
- There may not be sufficient fuel in the vehicle's tank. Refuel the vehicle.
- The fuel door may be open. (→P.255)
- There may be a malfunction in the immobilizer system. (→P.82)
- There may be a malfunction in the shift control system.* (→P.222, 628)
- The fuel cell system may be malfunctioning due to an electrical problem such as electronic key battery depletion or a blown fuse. However,

depending on the type of malfunction, an interim measure is available to start the fuel cell system. (→P.643)

- There is a possibility that the temperature of the traction battery is extremely low (approximately below -22°F [-30°C]). (→P.97, 219)
- It is possible the fuel cell system is frozen. (→P.219)

*: It may not be possible to shift the shift position from P.

The interior lights and headlights are dim, or the horn does not sound or sounds at a low volume.

One of the following may be the cause of the problem:

- The 12-volt battery may be discharged. (→P.647)
- The 12-volt battery terminal connections may be loose or corroded. (→P.556)

The interior lights and headlights do not turn on, or the horn does not sound.

One of the following may be the cause of the problem:

- One or both of the 12-volt battery terminals may be disconnected. (→P.556)
- The 12-volt battery may be

discharged. (→P.647)

Contact your Toyota dealer if the problem cannot be repaired, or if repair procedures are unknown.

Starting the fuel cell system in an emergency

When the fuel cell system does not start, the following steps can be used as an interim measure to start the fuel cell system if the power switch is functioning normally.

Do not use this starting procedure except in cases of emergency.

- 1 Pull the parking brake switch to check that the parking brake is set. (→P.231)

Parking brake indicator will come on.

- 2 Shift the shift position to P.
- 3 Turn the power switch to ACC.*
- 4 Press and hold the power switch for about 15 seconds while depressing the brake pedal firmly.

Even if the fuel cell system can be started using the above steps, the system may be malfunctioning. Have the vehicle inspected by your Toyota dealer.

*: Setting can be customized. (Vehicles without Toyota Teammate Advanced Drive) (→P.674)

If you lose your keys

New genuine mechanical keys can be made by your Toyota dealer using another mechanical key and the key number stamped on your key number plate.

Keep the plate in a safe place such as your wallet, not in the vehicle.

NOTICE

■ When an electronic key is lost

If the electronic key remains lost, the risk of vehicle theft increases significantly. Visit your Toyota dealer immediately with all remaining electronic keys that were provided with your vehicle.

If the fuel door cannot be opened

If the fuel door opener switch cannot be operated, the following procedure can be used to open the fuel door.

Opening the fuel door

- 1 Remove the cover inside the trunk.

- 2 After removing the cover, pull the lever to unlock the fuel door and it will be ready to open as usual.

If the electronic key does not operate properly

If communication between the electronic key and vehicle is interrupted (→P.177) or the electronic key cannot be used because the battery is depleted, the smart key system and wireless remote control cannot be used. In such cases, the doors and trunk can be opened and the fuel cell system can be started by following the procedure below.

■ **When the electronic key does not work properly**

- Make sure that the smart key system has not been deactivated in the customization setting. If it is off, turn the function on. (Customizable features: →P.674)
- Check if battery-saving mode is set. If it is set, cancel the function. (→P.177)
- Vehicles without Toyota Teammate Advanced Drive: The electronic key function may have stopped. (→P.177)

 NOTICE

■ **In case of a smart key system malfunction or other key-related problems**

Take your vehicle with all the electronic keys provided with your vehicle to your Toyota dealer.

Locking and unlocking the doors, unlocking the trunk

Use the mechanical key (→P.163) in order to perform the following operations:

■ **Locking and unlocking the door**

- 1 Locks all the doors
- 2 Unlocks all the doors

■ **Locking the door**

- 1 With the door open, push down the inside lock button.

- 2 Close the door.

■ **Trunk**

Turn the mechanical key clockwise to open. (→P.84)

■ **Key linked functions**

- 1 Closes the windows (turn and hold)*
- 2 Opens the windows (turn and hold)*

*: These settings must be customized at your Toyota dealer.

WARNING

■ **When using the mechanical key and operating the power windows**

Operate the power window after checking to make sure that there is no possibility of any passenger having any of their body parts caught in the window. Also, do not allow children to operate the mechanical key. It is possible for children and other passengers to get caught in the power window.

Starting the fuel cell system

- 1 With the P shift position selected, firmly depress the brake pedal.
- 2 Touch the area behind the buttons on the electronic key to the power switch.

When the electronic key is detected, a buzzer sounds and the power switch will turn to ON.

When the smart key system is deactivated in customization setting, the power switch will turn to ACC.

- 3 Firmly depress the brake pedal and check that  is shown on the multi-information display.
- 4 Press the power switch shortly and firmly.

In the event that the fuel cell system still cannot be started, contact your Toyota dealer.

Stopping the fuel cell system

Set the parking brake, shift the shift position to P and press the power switch as you normally do when stopping the fuel cell system.

Electronic key battery

As the above procedure is a temporary measure, it is recommended that the electronic key battery be replaced immediately when the battery is depleted. (→P.592)

Alarm (Vehicles without Toyota Teammate Advanced Drive)

Using the mechanical key to lock the doors will not set the alarm system. If a door is unlocked using the mechanical key when the alarm system is set, the alarm may be triggered. (→P.83)

Changing power switch modes

Release the brake pedal and press the power switch in step 3 above. The fuel cell system does not start and modes will be changed each time the switch is pressed. (→P.223)

If the 12-volt battery is discharged

The following procedures may be used to start the fuel cell system if the 12-volt battery is discharged. You can also call your Toyota dealer or a qualified repair shop.

Restarting the fuel cell system

If you have a set of jumper (or booster) cables and a second vehicle with a 12-volt battery, you can jump start your vehicle by following the steps below.

- 1 Confirm that the electronic key is being carried.

When connecting the jumper (or booster) cables, depending on the situation, the alarm may activate

and doors locked. (→P.84)

- 2 Open the hood. Remove the fuse box cover. (→P.549)

Push the tabs in and lift the lid off.

- 3 Open the exclusive jump starting terminal cover.

- 4 Connect a positive jumper cable clamp to **A** on your vehicle and connect the clamp on the other end of the positive cable to **B** on the second vehicle. Then, connect a negative cable clamp to **C** on the second vehicle and connect the clamp at the other end of the negative cable to **D**.

When connecting to an unpainted metallic point **D**, make the connection

648 **8-2. Steps to take in an emergency**

after checking the surrounding area. Also, do not make any connections where parts nearby may interfere.

Use jumper cables that can reach the specified terminals and connecting point.

A Exclusive jump starting terminal (your vehicle)

B Positive (+) battery terminal (second vehicle)

C Negative (-) battery terminal (second vehicle)

D Metallic point shown in the illustration

- 5 Start the engine of the second vehicle. Increase the engine speed slightly and maintain at that level for approximately 5 minutes to recharge the 12-volt battery of your vehicle.
 - 6 Open and close any of the doors of your vehicle with the power switch off.
 - 7 Maintain the engine speed of the second vehicle and start the fuel cell system of your vehicle by turning the power switch to ON.
 - 8 Make sure the "READY" indicator comes on. If the indicator does not come on, contact your Toyota dealer.
 - 9 Once the fuel cell system has started, remove the jumper cables in the exact reverse order from which they were connected.
 - 10 Close the exclusive jump starting terminal cover and install the fuse box cover.
- Once the fuel cell system starts, have the vehicle inspected at your Toyota dealer as soon as possible.

■ Starting the fuel cell system when the 12-volt battery is discharged

The fuel cell system cannot be started by push-starting.

■ To prevent 12-volt battery discharge

- Turn off the headlights and the audio system while the fuel cell system is off.
- Turn off any unnecessary electrical components when the vehicle is running at a low speed for an extended period, such as in heavy traffic.

■ When the 12-volt battery is removed or discharged

- Information stored in the ECU is cleared. When the 12-volt battery is depleted, have the vehicle inspected at your Toyota dealer.
- Some systems may require initialization. (→P.695)

■ When removing the 12-volt battery terminals

When the 12-volt battery terminals are removed, the information stored in the ECU is cleared. Before removing the 12-volt battery terminals, contact your Toyota dealer.

■ Charging the 12-volt battery

The electricity stored in the 12-volt battery will discharge gradually even when the vehicle is not in use, due to natural discharge and the draining effects of certain electrical appliances. If the vehicle is left for a long time, the 12-volt battery may discharge, and the fuel cell system may be unable to start. (The 12-volt battery recharges automatically while the fuel cell system is operating.)

■ When recharging or replacing the 12-volt battery

- In some cases, it may not be possible to unlock the doors using the

smart key system when the 12-volt battery is discharged. Use the wireless remote control or the mechanical key to lock or unlock the doors.

- The fuel cell system may not start on the first attempt after the 12-volt battery has recharged but will start normally after the second attempt. This is not a malfunction.
- The power switch mode is memorized by the vehicle. When the 12-volt battery is reconnected, the system will return to the mode it was in before the 12-volt battery was discharged. Before disconnecting the 12-volt battery, turn the power switch off. If you are unsure what mode the power switch was in before the 12-volt battery discharged, be especially careful when reconnecting the 12-volt battery.
- When the 12-volt battery is reconnected, start the fuel cell system, depress the brake pedal, and confirm that it is possible to shift into each shift position.
- If the battery is removed or the terminals disconnected without operating the water release function during cold weather, the vehicle may not start due to the fuel cell system being frozen. To prevent this, operate the water release function before removing the battery or disconnecting the terminals. (→P.236)
- If the 12-volt battery discharges, it may not be possible to shift the shift position to other positions. In this case, the vehicle cannot be towed without lifting both rear wheels because the rear wheels will be locked.
- **When replacing the 12-volt battery**
 - Use a Central Degassing type 12-volt battery (European Regulations).
 - Vehicles without Toyota Team-

650 8-2. Steps to take in an emergency

mate Advanced Drive:
Use a battery that the case size is same as the previous one (LN2), 20 hour rate capacity (20HR) is equivalent (55Ah) or greater, and performance rating (CCA) is equivalent (345A) or greater.

Vehicles with Toyota Teammate Advanced Drive:

Use a battery that the case size is same as the previous one (LN2), 20 hour rate capacity (20HR) is equivalent (60Ah) or greater, and performance rating (CCA) is equivalent (345A) or greater.

- If the sizes differ, the 12-volt battery cannot be properly secured.
- If the 20 hour rate capacity is low, even if the time period where the vehicle is not used is a short time, the 12-volt battery may discharge and the fuel cell system may not be able to start.
- Use a 12-volt battery with a handle. If a 12-volt battery without a handle is used, removal is more difficult.
- After replacing, firmly attach the following items to the exhaust hole of the 12-volt battery.
- Use the exhaust hose that was attached to the 12-volt battery before replacing and confirm that it is firmly connected to the hole section of the vehicle.
- Use the exhaust hole plug included with the 12-volt battery replaced or the one installed on the 12-volt battery prior to the replacement. (Depending on the 12-volt battery to be replaced, the exhaust hole may be plugged.)

A Exhaust hole plug

B Exhaust hole

C Exhaust hose

For details, consult your Toyota dealer.

⚠ WARNING

■ When removing the 12-volt battery terminals

Always remove the negative (-) terminal first. If the positive (+) terminal contacts any metal in the surrounding area when the positive (+) terminal is removed, a spark may occur, leading to a fire in addition to electrical shocks and death or serious injury.

■ Avoiding 12-volt battery fires or explosions

Observe the following precautions to prevent accidentally igniting the flammable gas that may be emitted from the 12-volt battery:

- Make sure each jumper cable is connected to the correct terminal and that it is not unintentionally in contact with any other than the intended terminal.
- Do not allow the other end of the jumper cable connected to the "+" terminal to come into contact with any other parts or metal surfaces in the area, such as brackets or unpainted metal.
- Do not allow the + and - clamps of the jumper cables to come into contact with each other.
- Do not smoke, use matches, cigarette lighters or allow open flame near the 12-volt battery.

⚠ WARNING**■ 12-volt battery precautions**

The 12-volt battery contains poisonous and corrosive acidic electrolyte, while related parts contain lead and lead compounds. Observe the following precautions when handling the 12-volt battery:

- When working with the 12-volt battery, always wear safety glasses and take care not to allow any battery fluids (acid) to come into contact with skin, clothing or the vehicle body.
- Do not lean over the 12-volt battery.
- In the event that battery fluid comes into contact with the skin or eyes, immediately wash the affected area with water and seek medical attention. Place a wet sponge or cloth over the affected area until medical attention can be received.
- Always wash your hands after handling the 12-volt battery support, terminals, and other battery-related parts.
- Do not allow children near the 12-volt battery.

■ After recharging the 12-volt battery

Have the 12-volt battery inspected at your Toyota dealer as soon as possible.

If the 12-volt battery is deteriorating, continued use may cause the 12-volt battery to emit a malodorous gas, which may be detrimental to the health of passengers.

■ When replacing the 12-volt battery

- When the vent plug and indicator are close to the hold down clamp, the battery fluid (sulfuric acid) may leak.

- For information regarding 12-volt battery replacement, contact your Toyota dealer.
- After replacing, securely attach the exhaust hose and exhaust hole plug to the exhaust hole of the replaced 12-volt battery. If not properly installed, gases (hydrogen) may leak into the vehicle interior, and there is the possible danger of the gas igniting and exploding.

⚠ NOTICE**■ When handling jumper cables**

When connecting the jumper cables, ensure that they do not become entangled in the cooling fan.

■ When connecting jumper cables

Make sure to connect jumper cables to the specified terminals and connecting point. Failure to do so may adversely affect the electronic devices or damage to them.

■ To prevent damaging the vehicle

The exclusive jump starting terminal is to be used when charging the 12-volt battery from another vehicle in an emergency. It cannot be used to jump start another vehicle.

If your vehicle overheats

The following may indicate that your vehicle is overheating.

- The high coolant temperature warning light (→P.611) comes on or flashes, or a loss of fuel cell system power is experienced. (For example, the vehicle speed does not increase.)
- The fuel cell system overheat warning light (→P.611) comes on
- Steam comes out from under the hood.

Parts name for cooling components

- A** Label
- B** Fuel cell stack coolant reservoir
- C** Inverter coolant reservoir

 NOTICE

■ Fuel cell stack coolant

The fuel cell stack coolant is exclusive for fuel cell stack usage. Damage may occur when water or any other type of coolant is used, so never use any other fluid. If the fuel cell stack coolant is low, immediately contact your Toyota dealer.

Correction procedures

- ▶ If the high coolant temperature warning light comes on or flashes
- 1** Stop the vehicle in a safe place and turn off the air conditioning system, and then stop the fuel cell system.
- 2** If you see steam: Carefully lift the hood after the steam subsides. If you do not see steam: Carefully lift the hood.
- 3** After the fuel cell system has cooled down sufficiently, inspect the hoses and radiator

for core (radiator) for any leaks.

- A** Electric cooling fan
- B** Fuel cell stack coolant radiator

If a large amount of coolant leaks, immediately contact your Toyota dealer.

- 4** The fuel cell stack coolant level is satisfactory if it is between the “MAX” and “MIN” lines on the reservoir.

- A** Fuel cell stack coolant reservoir
- B** “MAX” line
- C** “MIN” line

If the amount of fuel cell stack coolant is low: Immediately contact your Toyota dealer.

If the amount of fuel cell stack coolant is not low:
 Have the vehicle inspected at the nearest Toyota dealer.
 Even if the fuel cell stack coolant is low, do not refill it.

- ▶ If the fuel cell system over-heat warning light comes on
- 1 Stop the vehicle in a safe place and turn off the air conditioning system, and then stop the fuel cell system.
- 2 If you see steam or coolant leaks:
 Carefully lift the hood after the steam subsides.
 If you do not see steam or coolant leaks:
 Carefully lift the hood.
- 3 After the fuel cell system has cooled down, inspect the

hoses and radiator core (radiator) for any leaks.

- A** Electric cooling fan
- B** Inverter coolant radiator

If a large amount of coolant leaks, immediately contact your Toyota dealer.

- 4 The inverter coolant level is satisfactory if it is between the “MAX” and “MIN” lines on the reservoir.

- A** Inverter coolant reservoir
- B** “MAX” line
- C** “MIN” line

- 5 Add inverter coolant if necessary.

Water can be used in an emergency if inverter coolant is unavail-

able.

- 6** Start the fuel cell system and turn the air conditioning system on to check that the radiator cooling fan operate and to check for coolant leaks from the radiator or hoses.

The fan operate when the air conditioning system is turned on immediately after a cold start. Confirm that the fan is operating by checking the fan sound and air flow. If it is difficult to check these, turn the air conditioning system on and off repeatedly.

(The fan may not operate in freezing temperatures.)

- 7** If the fan is not operating:
Stop the fuel cell system immediately and contact your Toyota dealer.
If the fan is operating:
Have the vehicle inspected at the nearest Toyota dealer.

⚠ WARNING

- **When inspecting under the hood of your vehicle**
Observe the following precautions.
Failure to do so may result in serious injury such as burns.

- If steam is seen coming from under the hood, do not open the hood until the steam has subsided. The fuel cell unit compartment may be very hot.
- Even if fuel cell system has stopped, the cooling fan may begin to move suddenly. Do not touch or approach the rotating parts of the fan. Doing so may lead to fingers, clothes or tools getting caught, resulting in injury.
- Do not loosen the coolant reservoir caps or radiator cap, while the fuel cell system and radiator are hot. High temperature steam or coolant could spray out.

⚠ NOTICE

- **When inverter coolant**
Add coolant slowly after the fuel cell system has cooled down sufficiently. Adding inverter cool coolant to a hot fuel cell system too quickly can cause damage to the fuel cell system.
- **To prevent damage to the cooling system**
Observe the following precautions:
 - Avoid contaminating the coolant with foreign matter (such as sand or dust etc.).
 - Do not use any coolant additive with inverter coolant.
 - For replacement of the fuel cell stack coolant, contact your Toyota dealer.
 - Do not use water or any other coolant when refilling the fuel cell stack coolant. Also, do not use any additive agents for the coolant.

8 When trouble arises

If the vehicle becomes stuck

Carry out the following procedures if the tires spin or the vehicle becomes stuck in mud, dirt or snow:

Recovering procedure

- 1 Set the parking brake and stop the fuel cell system.
- 2 Remove the mud, snow or sand from around the rear wheels.
- 3 Place wood, stones or some other material under the rear wheels to help provide traction.
- 4 Restart the fuel cell system.
- 5 Shift the shift position to D or R and release the parking brake. Then, while exercising caution, depress the accelerator pedal.

When it is difficult to free the vehicle

Press the  switch to turn off TRAC.

A "Traction Control Turned Off"

WARNING

When attempting to free a stuck vehicle

If you choose to push the vehicle back and forth to free it, make sure the surrounding area is clear to avoid striking other vehicles, objects or people. The vehicle may also lunge forward or lunge back suddenly as it becomes free. Use extreme caution.

When shifting the shift position

Be careful not to shift the shift position with the accelerator pedal depressed.

This may lead to unexpected rapid acceleration of the vehicle that may cause an accident resulting in death or serious injury.

NOTICE

To avoid damaging the transmission and other components

- Avoid spinning the rear wheels and depressing the accelerator pedal more than necessary.
- If the vehicle remains stuck even after these procedures are performed, the vehicle may require towing to be freed.

Pedal free play	0.04 — 0.24 in. (1 — 6 mm)
Brake pad wear limit	0.04 in. (1 mm)
Parking brake lining wear limit	0.04 in. (1 mm)
Parking brake indicator * ²	When pulling the parking brake switch for 1 to 2 seconds: comes on When pushing the parking brake switch for 1 to 2 seconds: turns off
Fluid type	FMVSS No.116 DOT 3 or SAE J1703 FMVSS No.116 DOT 4 or SAE J1704

*¹: Minimum pedal clearance when depressed with a force of 112 lbf (500 N, 51 kgf) while the fuel cell system is operating.
When performing the brake pedal inspection, also be sure to check that the brake system warning light is not illuminated when the fuel cell system is operating. (If the brake system warning light is illuminated, refer to P.610.)

*2: Make sure to confirm that the brake warning light (yellow) does not illuminate. (If the brake warning light illuminates, refer to P.610.)

Steering

Free play	Less than 1.2 in. (30 mm)
-----------	---------------------------

Tires and wheels

► 19-inch tires

Tire size	235/55R19 101V
Tire inflation pressure (Recommended cold tire inflation pressure)	Front: 33 psi (230 kPa, 2.3 kgf/cm ² or bar) Rear: 33 psi (230 kPa, 2.3 kgf/cm ² or bar)
Wheel size	19 × 8J
Wheel nut torque	103 ft•lbf (140 N•m, 14.3 kgf•m)

► 20-inch tires

Tire size	245/45ZR20 103Y
Tire inflation pressure (Recommended cold tire inflation pressure)	Front: 33 psi (230 kPa, 2.3 kgf/cm ² or bar) Rear: 33 psi (230 kPa, 2.3 kgf/cm ² or bar)
Wheel size	20 × 8 1/2J
Wheel nut torque	103 ft•lbf (140 N•m, 14.3 kgf•m)

Tire information

Typical tire symbols

A Tire size (→P.665)

B DOT and Tire Identification Number (TIN) (→P.665)

C Location of treadwear indicators (→P.559)

D Tire ply composition and materials

Plies are layers of rubber-coated parallel cords. Cords are the strands which form the plies in a tire.

E Radial tires or bias-ply tires

A radial tire has "RADIAL" on the sidewall. A tire not marked "RADIAL" is a bias-ply tire.

F TUBELESS or TUBE TYPE

A tubeless tire does not have a tube and air is directly put into the tire. A tube type tire has a tube inside the tire and the tube maintains the air pressure.

G Load limit at maximum cold tire inflation pressure (→P.559)

H Maximum cold tire inflation pressure (→P.663)

This means the pressure to which a tire may be inflated.

I Uniform tire quality grading

For details, see "Uniform Tire Quality Grading" that follows.

J Summer tires or all season tires (→P.560)

An all season tire has “M+S” on the sidewall. A tire not marked “M+S” is a summer tire.

Typical DOT and Tire Identification Number (TIN)

► Type A

- A** DOT symbol*
- B** Tire Identification Number (TIN)
- C** Tire manufacturer’s identification mark
- D** Tire size code
- E** Manufacturer’s optional tire type code (3 or 4 letters)
- F** Manufacturing week
- G** Manufacturing year

*: The DOT symbol certifies that the tire conforms to applicable Federal Motor Vehicle Safety Standards.

► Type B

- A** DOT symbol*
- B** Tire Identification Number (TIN)
- C** Tire manufacturer’s identification mark
- D** Manufacturer’s code
- E** Manufacturing week
- F** Manufacturing year

*: The DOT symbol certifies that the tire conforms to applicable Federal Motor Vehicle Safety Standards.

Tire size

■ **Typical tire size information**

The illustration indicates typical tire size.

- A** Section width (millimeters)
- B** Aspect ratio (tire height to section width)
- C** Speed category (alphabet with one letter)
- D** Tire construction code (R = Radial, D = Diagonal)
- E** Wheel diameter (inches)
- F** Load index (2 digits or 3 digits)
- G** Speed symbol (alphabet with one letter)

■ **Tire dimensions**

- A** Section width
- B** Tire height
- C** Wheel diameter

Tire section names

- A** Bead
- B** Sidewall
- C** Shoulder
- D** Tread
- E** Belt
- F** Inner liner
- G** Reinforcing rubber
- H** Carcass
- I** Rim lines
- J** Bead wires
- K** Chafer

Uniform Tire Quality Grading

This information has been prepared in accordance with regulations issued by the National Highway Traffic Safety Administration of the U.S. Department of Transportation.

It provides the purchasers and/or prospective purchasers of Toyota vehicles with informa-

tion on uniform tire quality grading.

Your Toyota dealer will help answer any questions you may have as you read this information.

■ DOT quality grades

All passenger vehicle tires must conform to Federal Safety Requirements in addition to these grades. Quality grades can be found where applicable on the tire sidewall between tread shoulder and maximum section width.

For example: Treadwear 200 Traction AA Temperature A

■ Treadwear

The treadwear grade is a comparative rating based on the wear rate of the tire when tested under controlled conditions on a specified government test course.

For example, a tire graded 150 would wear one and a half (1 - 1/2) times as well on the government course as a tire graded 100.

The relative performance of tires depends upon the actual conditions of their use. Performance may differ significantly from the norm due to variations in driving habits, service practices and differences in road characteristics and climate.

■ Traction AA, A, B, C

The traction grades, from highest to lowest, are AA, A, B and C, and they represent the tire's ability to stop on wet pavement

as measured under controlled conditions on specified government test surfaces of asphalt and concrete.

A tire marked C may have poor traction performance.

Warning: The traction grade assigned to this tire is based on braking (straight ahead) traction tests and does not include cornering (turning) traction.

■ Temperature A, B, C

The temperature grades are A (the highest), B, and C, representing the tire's resistance to the generation of heat and its ability to dissipate heat when tested under controlled conditions on a specified indoor laboratory test wheel.

Sustained high temperature can cause the material of the tire to degenerate and reduce tire life, and excessive temperature can lead to sudden tire failure.

Grade C corresponds to a level of performance which all passenger car tires must meet under the Federal Motor Vehicle Safety Standard No. 109.

Grades B and A represent higher levels of performance on the laboratory test wheel than the minimum required by law.

Warning: The temperature grades of a tire assume that it is properly inflated and not overloaded.

Excessive speed, underinflation, or excessive loading, either separately or in combination, can cause

heat buildup and possible tire failure.

Glossary of tire terminology

Tire related term	Meaning
Cold tire inflation pressure	Tire pressure when the vehicle has been parked for three hours or more, or has not been driven more than 1 mile or 1.5 km under that condition
Maximum inflation pressure	The maximum cold inflated pressure to which a tire may be inflated, shown on the sidewall of the tire
Recommended inflation pressure	Cold tire inflation pressure recommended by a manufacturer
Accessory weight	The combined weight (in excess of those standard items which may be replaced) of transmission, power steering, power brakes, power windows, power seats, radio and heater, to the extent that these items are available as factory-installed equipment (whether installed or not)
Curb weight	The weight of a motor vehicle with standard equipment, including the maximum capacity of fuel, oil and coolant, and if so equipped, air conditioning and additional weight optional engine
Maximum loaded vehicle weight	The sum of: (a) Curb weight (b) Accessory weight (c) Vehicle capacity weight (d) Production options weight
Normal occupant weight	150 lb. (68 kg) times the number of occupants specified in the second column of Table 1* that follows
Occupant distribution	Distribution of occupants in a vehicle as specified in the third column of Table 1* below

Tire related term	Meaning
Production options weight	The combined weight of installed regular production options weighing over 5 lb. (2.3 kg) in excess of the standard items which they replace, not previously considered in curb weight or accessory weight, including heavy duty brakes, ride levelers, roof rack, heavy duty 12-volt battery, and special trim
Rim	A metal support for a tire or a tire and tube assembly upon which the tire beads are seated
Rim diameter (Wheel diameter)	Nominal diameter of the bead seat
Rim size designation	Rim diameter and width
Rim type designation	The industry manufacturer's designation for a rim by style or code
Rim width	Nominal distance between rim flanges
Vehicle capacity weight (Total load capacity)	The rated cargo and luggage load plus 150 lb. (68 kg) times the vehicle's designated seating capacity
Vehicle maximum load on the tire	The load on an individual tire that is determined by distributing to each axle its share of the maximum loaded vehicle weight, and dividing by two
Vehicle normal load on the tire	The load on an individual tire that is determined by distributing to each axle its share of curb weight, accessory weight, and normal occupant weight (distributed in accordance with Table 1* below), and dividing by two
Weather side	The surface area of the rim not covered by the inflated tire
Bead	The part of the tire that is made of steel wires, wrapped or reinforced by ply cords and that is shaped to fit the rim
Bead separation	A breakdown of the bond between components in the bead

Tire related term	Meaning
Bias ply tire	A pneumatic tire in which the ply cords that extend to the beads are laid at alternate angles substantially less than 90 degrees to the centerline of the tread
Carcass	The tire structure, except tread and sidewall rubber which, when inflated, bears the load
Chunking	The breaking away of pieces of the tread or sidewall
Cord	The strands forming the plies in the tire
Cord separation	The parting of cords from adjacent rubber compounds
Cracking	Any parting within the tread, sidewall, or innerliner of the tire extending to cord material
CT	A pneumatic tire with an inverted flange tire and rim system in which the rim is designed with rim flanges pointed radially inward and the tire is designed to fit on the underside of the rim in a manner that encloses the rim flanges inside the air cavity of the tire
Extra load tire	A tire designed to operate at higher loads and at higher inflation pressures than the corresponding standard tire
Groove	The space between two adjacent tread ribs
Innerliner	The layer(s) forming the inside surface of a tubeless tire that contains the inflating medium within the tire
Innerliner separation	The parting of the innerliner from cord material in the carcass

Tire related term	Meaning
Intended outboard sidewall	(a) The sidewall that contains a whitewall, bears white lettering, or bears manufacturer, brand, and/or model name molding that is higher or deeper than the same molding on the other sidewall of the tire, or (b) The outward facing sidewall of an asymmetrical tire that has a particular side that must always face outward when mounted on a vehicle
Light truck (LT) tire	A tire designated by its manufacturer as primarily intended for use on lightweight trucks or multipurpose passenger vehicles
Load rating	The maximum load that a tire is rated to carry for a given inflation pressure
Maximum load rating	The load rating for a tire at the maximum permissible inflation pressure for that tire
Maximum permissible inflation pressure	The maximum cold inflation pressure to which a tire may be inflated
Measuring rim	The rim on which a tire is fitted for physical dimension requirements
Open splice	Any parting at any junction of tread, sidewall, or innerliner that extends to cord material
Outer diameter	The overall diameter of an inflated new tire
Overall width	The linear distance between the exteriors of the sidewalls of an inflated tire, including elevations due to labeling, decorations, or protective bands or ribs
Passenger car tire	A tire intended for use on passenger cars, multipurpose passenger vehicles, and trucks, that have a gross vehicle weight rating (GVWR) of 10,000 lb. or less.
Ply	A layer of rubber-coated parallel cords
Ply separation	A parting of rubber compound between adjacent plies

Tire related term	Meaning
Pneumatic tire	A mechanical device made of rubber, chemicals, fabric and steel or other materials, that, when mounted on an automotive wheel, provides the traction and contains the gas or fluid that sustains the load
Radial ply tire	A pneumatic tire in which the ply cords that extend to the beads are laid at substantially 90 degrees to the centerline of the tread
Reinforced tire	A tire designed to operate at higher loads and at higher inflation pressures than the corresponding standard tire
Section width	The linear distance between the exteriors of the sidewalls of an inflated tire, excluding elevations due to labeling, decoration, or protective bands
Sidewall	That portion of a tire between the tread and bead
Sidewall separation	The parting of the rubber compound from the cord material in the sidewall
Snow tire	A tire that attains a traction index equal to or greater than 110, compared to the ASTM E-1136 Standard Reference Test Tire, when using the snow traction test as described in ASTM F-1805-00, Standard Test Method for Single Wheel Driving Traction in a Straight Line on Snow-and Ice-Covered Surfaces, and which is marked with an Alpine Symbol () on at least one sidewall
Test rim	The rim on which a tire is fitted for testing, and may be any rim listed as appropriate for use with that tire
Tread	That portion of a tire that comes into contact with the road

Tire related term	Meaning
Tread rib	A tread section running circumferentially around a tire
Tread separation	Pulling away of the tread from the tire carcass
Treadwear indicators (TWI)	The projections within the principal grooves designed to give a visual indication of the degrees of wear of the tread
Wheel-holding fixture	The fixture used to hold the wheel and tire assembly securely during testing

*: Table 1 -Occupant loading and distribution for vehicle normal load for various designated seating capacities

Designated seating capacity, Number of occupants	Vehicle normal load, Number of occupants	Occupant distribution in a normally loaded vehicle
2 through 4	2	2 in front
5 through 10	3	2 in front, 1 in second seat
11 through 15	5	2 in front, 1 in second seat, 1 in third seat, 1 in fourth seat
16 through 20	7	2 in front, 2 in second seat, 2 in third seat, 1 in fourth seat

Customizable features

Your vehicle includes a variety of electronic features that can be personalized to your preferences. The settings of these features can be changed by using the multi-information display, the multimedia system or at your Toyota dealer.

Vehicles with Toyota Teammate Advanced Drive, refer to "Toyota Teammate Advanced Drive OWNER'S MANUAL".

Customizing vehicle features

■ Changing by using the meter control switches (vehicles without Toyota Teammate Advanced Drive)

- 1 Press and hold OK to display the cursor on the content display area (center) of the multi-information display.
- 2 Press \wedge / \vee of the meter control switches to select  and press OK.
- 3 Press \wedge / \vee of the meter control switches, select the item.

- 4 To switch the function on and off, press OK to switch to the desired setting.
- 5 To perform detailed setting of functions that support detailed settings, press and hold OK and display the setting screen.

The method of performing detailed setting differs for each screen.

Please refer to the advice sentence displayed on the screen.

■ Changing by using the meter control switches (vehicles with Toyota Teammate Advanced Drive)

- 1 Press \langle or \rangle to select .
- 2 Operate the meter control switches to select the desired item to be customized.
- 3 According to the display, select the desired setting and then press OK.

To go back to the previous screen or exit the customize mode, press .

■ Changing by using the multimedia system

- 1 Select  on the main menu screen.
- 2 Select "Vehicle customize".
- 3 Select the item to change the settings of from the list.

Various setting can be changed. Refer to the list of settings that can be changed for details.

 NOTICE
<p>■ During customization</p> <p>To prevent 12-volt battery discharge, ensure that the fuel cell system is operating while customizing features.</p>

Customizable features

Some function settings are changed simultaneously with other functions being customized. Contact your Toyota dealer for further details.

- A** Settings that can be changed using the multimedia system
- B** Settings that can be changed using the multi-information display
- C** Settings that can be changed by your Toyota dealer

Definition of symbols: O = Available, — = Not available

■ Seat belts (→P.33)

Function	Default setting	Customized setting	A	B	C
Retraction of front seat belts when vehicle speed reaches approximately 12 mph (20 km/) [*]	On	Off	—	—	O
Retraction of front seat belt when corresponding front door is opened or seat belt is released [*]	On	Off	—	—	O

^{*}: Vehicles with Active Assist

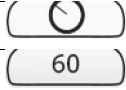

■ Alarm^{*} (→P.83)

Function	Default setting	Customized setting	A	B	C
Deactivates the alarm when the doors or trunk are unlocked using the mechanical key	On	Off	—	—	O

■ **Toyota Teammate Advanced Drive***

Refer to "Toyota Teammate Advanced Drive OWNER'S MANUAL" at Toyota.com.

*: If equipped

■ **Vehicle customization**

- When the smart key system is off, the entry unlock function cannot be customized.
- When the doors remain closed after unlocking the doors and the timer activated automatic door lock function activates, signals will be generated in accordance with the operation buzzer volume and operational signal (Emergency flashers) function settings.
- Some settings can be changed using a switch or the multimedia system. If a setting is changed using a switch, the changed setting will not be reflected on the multimedia system until the power

switch is turned off and then to ON.

Items to initialize

The following items must be initialized for normal system operation after such cases as the 12-volt battery being reconnected, or maintenance being performed on the vehicle:

List of items to initialize

Item	When to initialize	Reference
Power windows	<ul style="list-style-type: none"> • When functioning abnormally 	P.196
Tire pressure warning system	<ul style="list-style-type: none"> • When the tire inflation pressure is changed, such as when changing traveling speed or load weight. • When the tire inflation pressure is changed, such as when the tire size is changed. • When rotating the tires. • After performing the transmitter ID code registration procedure. 	P.563, 576

Reporting safety defects for U.S. owners

If you believe that your vehicle has a defect which could cause a crash or could cause injury or death, you should immediately inform the National Highway Traffic Safety Administration (NHTSA) in addition to notifying Toyota Motor Sales, U.S.A., Inc. (Toll-free: 1-800-331-4331).

If NHTSA receives similar complaints, it may open an investigation, and if it finds that a safety defect exists in a group of vehicles, it may order a recall and remedy campaign. However, NHTSA cannot become involved in individual problems between you, your dealer, or Toyota Motor Sales, U.S.A., Inc.

To contact NHTSA, you may call the Vehicle Safety Hotline toll-free at 1-888-327-4236 (TTY: 1-800-424-9153); go to <http://www.safercar.gov>; or write to: Administrator, NHTSA, 1200 New Jersey Ave. SE., Washington, DC 20590. You can also obtain other information about motor vehicle safety from <http://www.safercar.gov>.

Reporting safety defects for Canadian owners

Canadian customers who wish to report a safety-related defect to Transport Canada, Defects Investigations and Recalls, may telephone the toll-free hotline 1-800-333-0510, mail Transport Canada - ASFAD, 330 Sparks Street, Ottawa, ON, K1A 0N5, or complete the online form at <https://www.tc.gc.ca/recalls>.

Seat belt instructions for Canadian owners (in French)

The following is a French explanation of seat belt instructions extracted from the seat belt section in this manual.

See the seat belt section for more detailed seat belt instructions in English.

Utilisation adéquate des ceintures de sécurité

- Tirez sur la ceinture épaulière jusqu'à ce qu'elle recouvre entièrement l'épaule; elle ne doit cependant pas toucher le cou ni glisser de l'épaule.
- Placez la ceinture abdominale le plus bas possible sur les hanches.
- Réglez la position du dossier. Tenez-vous assis bien au fond du siège, le dos droit.
- Ne vrillez pas la ceinture de sécurité.

Entretien et nettoyage

■ Manipulation des ceintures de sécurité

Avec un chiffon ou une éponge, nettoyez à l'aide d'un savon doux et de l'eau tiède. Vérifiez aussi les ceintures régulièrement pour vous assurer qu'elles ne présentent pas d'usure excessive, d'effilochage ou de coupures.

⚠ AVERTISSEMENT

■ Dommages et usure de la ceinture de sécurité

Vérifiez périodiquement le système de ceintures de sécurité. Vérifiez qu'il n'y a pas de coupures, d'effilochures ni de pièces desserrées. N'utilisez pas une ceinture de sécurité endommagée avant qu'elle ne soit remplacée. Les ceintures de sécurité endommagées ne peuvent pas protéger les occupants contre les blessures graves, voire mortelles.

SRS airbag instructions for Canadian owners
(Vehicles without Toyota Teammate Advanced
Drive) (in French)

The following is a French explanation of SRS airbag instructions extracted from the SRS airbag section in this manual.

See the SRS airbag section for more detailed SRS airbag instructions in English.

Système de coussins gonflables SRS

■ Emplacement des coussins gonflables SRS

- A** coussin gonflable SRS du conducteur/coussin gonflable SRS du passager avant
Permettent de réduire les blessures par choc à la tête et à la poitrine du conducteur et du passager avant
- B** Coussins gonflables SRS de protection des genoux
Permettent de réduire les blessures par choc du conducteur et du passager avant
- C** Coussins gonflables SRS latéraux
Permettent de réduire les blessures par choc à la poitrine des

occupants des sièges avant

D Coussins gonflables SRS en rideau

- Permettent de réduire les blessures par choc à la tête des occupants des sièges avant et latéraux arrière
- Peuvent permettre d'éviter que les occupants soient éjectés du véhicule en cas de tonneaux

Votre véhicule est doté de COUSSINS GONFLABLES ÉVOLUÉS dont la conception s'appuie sur les normes de sécurité des véhicules à moteur américains (FMVSS208). Le module de capteur de coussin gonflable (ECU) contrôle le déploiement des coussins gonflables en fonction des informations obtenues des capteurs et d'autres éléments affichés dans le diagramme des composants du système ci-dessus. Ces informations comprennent des données relatives à la gravité de l'accident et aux occupants. Au moment du déploiement des coussins gonflables, une réaction chimique se produit dans les gonfleurs de coussin gonflable et les coussins gonflables se remplissent rapidement d'un gaz non toxique pour aider à limiter le mouvement des occupants.

AVERTISSEMENT

■ **Précautions relatives aux coussins gonflables SRS**

Observez les précautions suivantes. Négliger de le faire pourrait occasionner des blessures graves, voire mortelles.

⚠ AVERTISSEMENT

- Le coussin gonflable SRS du conducteur se déploie avec une force considérable et peut occasionner des blessures graves, voire mortelles, notamment lorsque le conducteur se trouve très près du coussin gonflable. La National Highway Traffic Safety Administration (NHTSA), aux États-Unis, fait les recommandations suivantes :
La zone à risque du coussin gonflable du conducteur couvre 2 à 3 in. (50 à 75 mm) de la zone de déploiement du coussin gonflable. Pour assurer une marge de sécurité suffisante, restez à 10 in. (250 mm) du coussin gonflable. Cette distance est mesurée du centre du volant à votre sternum. Si votre position de conduite actuelle vous place à moins de 10 in. (250 mm) du coussin gonflable du conducteur, vous pouvez changer votre position de plusieurs manières :
 - Reculez votre siège à la position maximale vous permettant d'atteindre encore aisément les pédales.
 - Inclinez légèrement le dossier du siège vers l'arrière. Bien que les véhicules soient conçus différemment, la plupart des conducteurs peuvent maintenir une distance de 10 in. (250 mm), même si leur siège est avancé au maximum, simplement en inclinant légèrement le dossier du siège vers l'arrière. Si la visibilité avant est compromise après avoir incliné le dossier du siège, utilisez un coussin ferme et non glissant pour être assis plus haut ou relevez le siège si cette option est disponible sur votre véhicule.

- Si votre volant est réglable en hauteur, inclinez-le vers le bas. Cela vous permet d'orienter le coussin gonflable vers votre buste plutôt que vers votre tête et vers votre cou. Le siège doit être réglé de la manière recommandée par la NHTSA, tout en vous permettant de conserver le contrôle des pédales et du volant du véhicule, ainsi que la vue sur les commandes du tableau de bord.

- Si la rallonge de ceinture de sécurité a été reliée à la boucle de la ceinture de sécurité du siège avant, mais que la plaque de blocage de la ceinture de sécurité du siège n'a pas été bloquée sur la rallonge de ceinture de sécurité, le système de coussins gonflables SRS considérera que l'occupant porte tout de même sa ceinture de sécurité même si la ceinture de sécurité n'est pas bouclée. Les coussins gonflables SRS avant peuvent alors ne pas se déployer correctement lors d'une collision, ce qui pourrait occasionner des blessures graves, voire mortelles. Assurez-vous de toujours porter la ceinture de sécurité correctement lors de l'usage d'une rallonge de ceinture de sécurité.

⚠ AVERTISSEMENT

- Le coussin gonflable SRS du passager avant se déploie avec une force considérable et peut occasionner des blessures graves, voire mortelles, notamment lorsque le passager avant se trouve très près du coussin gonflable. Le siège du passager avant doit être positionné le plus loin possible du coussin gonflable avec le dossier de siège réglé de façon à ce que le passager soit assis bien droit sur son siège.
- Le déploiement d'un coussin gonflable risque d'infliger des blessures graves, voire mortelles, aux bébés et aux enfants mal assis et/ou mal attachés. Un bébé ou un enfant trop petit pour utiliser une ceinture de sécurité doit être correctement retenu à l'aide d'un dispositif de retenue pour enfants. Toyota recommande vivement de placer et d'attacher correctement tous les bébés et tous les enfants sur les sièges arrière du véhicule à l'aide de dispositifs de retenue adaptés. Les sièges arrière sont plus sécuritaires pour les bébés et les enfants que le siège du passager avant.
- N'installez jamais un dispositif de retenue pour enfants de type dos à la route sur le siège du passager avant, même si le voyant "AIRBAG OFF" est allumé. En cas d'accident, la force et la vitesse de déploiement du coussin gonflable du passager avant pourraient infliger à l'enfant des blessures graves, voire mortelles, si le dispositif de retenue pour enfants de type dos à la route était installé sur le siège du passager avant.

- Ne vous asseyez pas sur le bord du siège et ne vous appuyez pas sur la planche de bord.

- Ne laissez pas un enfant se tenir face au coussin gonflable SRS du passager avant ni s'asseoir sur les genoux d'un passager avant.

- Les occupants des sièges avant ne doivent jamais placer d'objets sur leurs genoux.
- Ne vous appuyez pas sur la portière ou sur un brancard de pavillon, ni sur un montant avant, latéral ou arrière.

⚠ AVERTISSEMENT

- Ne laissez personne s'agenouiller face à la portière, ni sortir la tête ou les mains à l'extérieur du véhicule.

- Ne fixez et n'appuyez rien sur des zones telles que la planche de bord, le tampon de volant ou encore la partie inférieure du tableau de bord.

- Ne fixez rien sur des zones telles que les portières, le pare-brise, les glaces latérales, les montants avant ou arrière, les brancards de pavillon et les poignées de maintien. (À l'exception de l'étiquette de limitation de vitesse)

- N'accrochez pas de cintres ni d'autres objets rigides sur les crochets porte-vêtements. Ces objets pourraient se transformer en projectiles en cas de déploiement des coussins gonflables SRS en rideau, susceptibles d'occasionner des blessures graves, voire mortelles.

- Si un recouvrement de vinyle est fixé sur la zone de déploiement du coussin gonflable SRS de protection des genoux, veillez à le retirer.

- N'utilisez pas d'accessoires de sièges recouvrant les parties d'où les coussins gonflables SRS se déploient, car ils pourraient entraver le gonflage des coussins gonflables SRS. De tels accessoires peuvent empêcher les coussins gonflables SRS de se déployer correctement, rendre le système inopérant ou provoquer accidentellement le déploiement des coussins gonflables SRS, ce qui serait susceptible d'occasionner des blessures graves, voire mortelles.

- Ne frappez jamais et n'exercez aucune pression excessive sur les composants du système de coussins gonflables SRS, les portières avant, ni au niveau des zones environnantes. Cela peut provoquer un mauvais fonctionnement des coussins gonflables SRS.

- Ne touchez à aucun composant des coussins gonflables SRS immédiatement après leur déploiement (gonflage), car ils pourraient être chauds.

⚠ AVERTISSEMENT

- Si vous avez de la difficulté à respirer après le déploiement des coussins gonflables SRS, ouvrez une portière ou une glace pour laisser entrer l'air frais, ou quittez le véhicule si vous pouvez le faire en toute sécurité. Dès que possible, nettoyez tous les résidus afin d'éviter les irritations cutanées.
- Si une pièce abritant un coussin gonflable SRS est endommagée ou fissurée, faites-la remplacer par votre concessionnaire Toyota.
- Ne placez aucun objet, par exemple un coussin, sur le siège du passager avant. Cela disperserait le poids du passager, ce qui empêcherait le capteur de le détecter correctement. Ceci pourrait empêcher le déploiement des coussins gonflables SRS du siège du passager avant en cas de collision.
- **Modification et mise au rebut des composants du système de coussins gonflables SRS**
Ne mettez pas votre véhicule au rebut et n'effectuez aucune des modifications suivantes sans d'abord consulter votre concessionnaire Toyota. Les coussins gonflables SRS pourraient fonctionner de manière incorrecte ou se déployer accidentellement, ce qui serait susceptible d'occasionner des blessures graves, voire mortelles.
- Retrait, installation, démontage ou réparation des coussins gonflables SRS
- Réparation, retrait ou modification des pièces suivantes ou de leurs parties environnantes
- Volant

- Tableau de bord
- Planche de bord
- Sièges
- Capitonage des sièges
- Montants avant
- Montants latéraux
- Montants arrière
- Brancards de pavillon
- Panneaux des portières avant
- Garnitures des portières avant
- Haut-parleurs des portières avant
- Modifications des panneaux des portières avant (comme les perforer)
- Réparation ou modification des pièces suivantes ou de leurs parties environnantes
- Aile avant
- Pare-chocs avant
- Parties latérales de l'intérieur du véhicule
- Installation des parties ou accessoires suivants
- Barres safari ou barres kangourou
- Lames de déneigement
- Treuils
- Porte-bagages de toit
- Modifications de la suspension du véhicule
- Installation d'appareils électroniques tels qu'un émetteur-récepteur radio (RF-transmettre) ou un lecteur de CD

AVERTISSEMENT

- Modifications à votre véhicule pour des personnes aux capacités physiques réduites

SRS airbag instructions for Canadian owners (Vehicles with Toyota Teammate Advanced Drive) (in French)

The following is a French explanation of SRS airbag instructions extracted from the SRS airbag section in this manual.

See the SRS airbag section for more detailed SRS airbag instructions in English.

Système de coussins gonflables SRS

■ Emplacement des coussins gonflables SRS

► Coussins gonflables SRS avant

- A** Coussin gonflable SRS du conducteur/coussin gonflable SRS du passager avant

Peuvent aider à protéger la tête et la poitrine du conducteur et du passager avant contre les impacts avec des composants intérieurs

- B** Coussins gonflables SRS de protection des genoux

Peuvent aider à protéger le conducteur et le passager avant

► Coussins gonflables SRS latéraux et en rideau

▣ Coussins gonflables SRS latéraux avant

Peuvent aider à protéger le torse des occupants des sièges avant

▣ Coussins gonflables SRS en rideau

- Peuvent aider à protéger principalement la tête des occupants des sièges latéraux
- Peuvent aider à empêcher les occupants d'être éjectés du véhicule en cas de tonneaux

■ Composants du système de coussins gonflables SRS

▣ Capteurs d'impact avant

▣ Coussins gonflables de protection des genoux

▣ Coussin gonflable du passager avant

▣ Coussins gonflables en rideau

▣ Capteurs d'impact latéral (portière avant)

▣ Dispositifs de tension des ceintures de sécurité

▣ Coussins gonflables latéraux

▣ Lampe témoin SRS

▣ Coussin gonflable du conducteur

- J** Capteurs d'impact latéral (arrière)
- K** Capteurs d'impact latéral (avant)
- L** Capteur de position du siège du conducteur
- M** Contacteur de boucle de ceinture de sécurité du conducteur
- N** Module de capteur de coussin gonflable
- O** Contacteur de boucle de ceinture de sécurité passager avant
- P** Système de classification de l'occupant du siège du passager avant (ECU et capteurs)
- Q** Voyants "AIRBAG ON" et "AIRBAG OFF"

Votre véhicule est doté de COUSSINS GONFLABLES ÉVOLUÉS dont la conception s'appuie sur les normes de sécurité des véhicules à moteur américains (FMVSS208). Le module de capteur de coussin gonflable (ECU) contrôle le déploiement des coussins gonflables en fonction des informations obtenues des capteurs et d'autres éléments affichés dans le diagramme des composants du système ci-dessus. Ces informations comprennent des données relatives à la gravité de l'accident et aux occupants. Au moment du déploiement des coussins gonflables, une réaction chimique se produit dans les gonfleurs de coussin gonflable et les coussins gonflables se remplissent rapidement d'un gaz non toxique pour aider à limiter le mouvement des occupants.

⚠ AVERTISSEMENT

■ Précautions relatives aux coussins gonflables SRS

Observez les précautions suivantes en ce qui concerne les coussins gonflables SRS. Négliger de le faire pourrait occasionner des blessures graves, voire mortelles.

- Le conducteur et tous les passagers du véhicule doivent porter leur ceinture de sécurité de la manière appropriée. Les coussins gonflables SRS sont des dispositifs supplémentaires qui doivent être utilisés avec les ceintures de sécurité.

 **AVERTISSEMENT**

- Le coussin gonflable SRS du conducteur se déploie avec une force considérable et peut occasionner des blessures graves, voire mortelles, notamment lorsque le conducteur se trouve très près du coussin gonflable.

La National Highway Traffic Safety Administration (NHTSA), aux États-Unis, fait les recommandations suivantes : La zone à risque du coussin gonflable du conducteur couvre 2 à 3 in. (50 à 75 mm) de la zone de déploiement du coussin gonflable.

Pour assurer une marge de sécurité suffisante, restez à 10 in.

(250 mm) du coussin gonflable.

Cette distance est mesurée du centre du volant à votre sternum.

Si maintenant vous vous tenez assis à moins de 10 in. (250 mm), vous pouvez changer votre position de conduite de plusieurs manières :

- Reculez votre siège à la position maximale vous permettant d'atteindre encore aisément les pédales.

- Inclinez légèrement le dossier du siège.

Bien que les véhicules soient conçus différemment, la plupart des conducteurs peuvent maintenir une distance de 10 in.

(250 mm), même si leur siège se trouve complètement vers l'avant, simplement en inclinant un peu le dossier du siège vers l'arrière. Si la visibilité avant est moindre après avoir incliné le dossier de votre siège, utilisez un coussin ferme et non glissant pour être assis plus haut ou relevez le siège si cette option est disponible sur votre véhicule.

- Si votre volant est réglable en hauteur, inclinez-le vers le bas. Cela vous permet d'orienter le coussin gonflable vers votre buste plutôt que vers votre tête et vers votre cou.

Le siège doit être réglé de la manière recommandée ci-dessus par la NHTSA, tout en gardant le contrôle des pédales et du volant, ainsi que la vue sur les commandes du tableau de bord.

⚠ AVERTISSEMENT

- Si la rallonge de ceinture de sécurité a été reliée à la boucle des ceintures de sécurité des sièges avant sans avoir aussi été attachée à la plaque de blocage des ceintures de sécurité, les coussins gonflables SRS avant considéreront que le conducteur et le passager avant portent tout de même leur ceinture de sécurité même si les ceintures de sécurité ne sont pas attachées. Les coussins gonflables SRS avant peuvent alors ne pas s'activer correctement lors d'une collision, ce qui pourrait occasionner des blessures graves, voire mortelles, en cas de collision. Assurez-vous de toujours porter la ceinture de sécurité avec la rallonge de ceinture de sécurité.

- Le coussin gonflable SRS du passager avant se déploie également avec une force considérable et peut occasionner des blessures graves, voire mortelles, notamment lorsque le passager avant se trouve très près du coussin gonflable. Le siège du passager avant doit se trouver le plus loin possible du coussin gonflable et le dossier doit être réglé de manière à ce que le passager avant soit assis bien droit.

- Le déploiement d'un coussin gonflable risque d'infliger des blessures graves, voire mortelles, aux bébés et aux enfants mal assis et/ou mal attachés. Un bébé ou un enfant trop petit pour utiliser une ceinture de sécurité doit être correctement retenu à l'aide d'un dispositif de retenue pour enfants. Toyota recommande vivement de placer et d'attacher correctement tous les bébés et tous les enfants sur les sièges arrière du véhicule à l'aide de dispositifs de retenue adaptés. Les sièges arrière sont plus sécuritaires pour les bébés et les enfants que le siège du passager avant.

- N'installez jamais un dispositif de retenue pour enfants de type dos à la route sur le siège du passager avant, même si le voyant "AIRBAG OFF" est allumé. En cas d'accident, la force et la vitesse de déploiement du coussin gonflable du passager avant pourraient infliger à l'enfant des blessures graves, voire mortelles, si le dispositif de retenue pour enfants de type dos à la route était installé sur le siège du passager avant.

- Ne vous asseyez pas sur le bord du siège et ne vous appuyez pas sur la planche de bord.

⚠ AVERTISSEMENT

- Ne laissez pas un enfant se tenir face au coussin gonflable SRS du passager avant ni s'asseoir sur les genoux d'un passager avant.

- Ne laissez pas les occupants des sièges avant tenir des objets sur leurs genoux.

- Ne vous appuyez pas sur la portière ou sur le brancard de pavillon, ni sur les montants avant, latéraux ou arrière.

- Ne laissez personne s'agenouiller face à la portière sur les sièges des passagers ni sortir la tête ou les mains à l'extérieur du véhicule.

- Ne fixez et n'appuyez rien sur des zones telles que la planche de bord, le tampon de volant ou encore la partie inférieure du tableau de bord. Ces objets peuvent se transformer en projectiles lorsque les coussins gonflables SRS du conducteur, du passager avant et de protection des genoux se déploient.

- Ne fixez rien sur des zones telles que les portières, le pare-brise, les glaces latérales, les montants avant ou arrière, le brancard de pavillon et la poignée de maintien. (Sauf pour l'étiquette de limitation de vitesse)

- N'accrochez pas de cintres ni d'objets rigides sur les crochets porte-vêtements. Tous ces objets pourraient se transformer en projectiles et vous occasionner des blessures graves, voire mortelles, en cas de déploiement des coussins gonflables SRS en rideau.

- Si un recouvrement de vinyle est placé sur la zone de déploiement du coussin gonflable SRS de protection des genoux, veuillez à le retirer.

 **AVERTISSEMENT**

- N'utilisez pas d'accessoires recouvrant les parties du siège où les coussins gonflables SRS latéraux se déploient, car ces accessoires pourraient entraver le déploiement des coussins gonflables SRS. De tels accessoires peuvent empêcher les coussins gonflables SRS latéraux de se déployer correctement, rendre le système inopérant ou provoquer accidentellement le déploiement des coussins gonflables SRS latéraux, occasionnant des blessures graves, voire mortelles.
- Ne frappez pas et n'appliquez pas une pression importante à l'emplacement des portières avant ou des composants des coussins gonflables SRS. Cela peut provoquer un mauvais fonctionnement des coussins gonflables SRS.
- Ne touchez à aucun composant des coussins gonflables SRS immédiatement après leur déploiement (gonflage), car ils pourraient être chauds.
- Si vous avez de la difficulté à respirer après le déploiement des coussins gonflables SRS, ouvrez une portière ou une glace pour laisser entrer l'air frais, ou quittez le véhicule si vous pouvez le faire en toute sécurité. Dès que possible, nettoyez tous les résidus afin d'éviter les irritations cutanées.
- Si les emplacements de stockage des coussins gonflables SRS, tels que le tampon de volant et les garnitures des montants avant et arrière, sont endommagés ou fissurés, faites-les remplacer par votre concessionnaire Toyota.

- Ne placez aucun objet, par exemple un coussin, sur le siège du passager avant. Cela disperserait le poids du passager, ce qui empêcherait le capteur de le détecter correctement. Cela pourrait empêcher le déploiement des coussins gonflables SRS du passager avant en cas de collision.

■ **Modification et mise au rebut des composants du système de coussins gonflables SRS**

Ne mettez pas votre véhicule au rebut et n'effectuez aucune des modifications suivantes sans d'abord consulter votre concessionnaire Toyota. Les coussins gonflables SRS pourraient fonctionner de manière incorrecte ou se déployer (gonfler) accidentellement, ce qui serait susceptible d'occasionner des blessures graves, voire mortelles.

- Installation, retrait, démontage et réparation des coussins gonflables SRS
- Réparations, modifications, retrait ou remplacement du volant, du tableau de bord, de la planche de bord, des sièges ou du capitonnage des sièges, des montants avant, latéraux et arrière, des brancards de pavillon, des panneaux des portières avant, des garnitures des portières avant ou des haut-parleurs des portières avant
- Modifications du panneau de la portière avant (comme le perforer)
- Réparations ou modifications de l'aile avant, du pare-chocs avant ou du côté de l'habitacle

⚠ AVERTISSEMENT

- Installation d'une protection de calandre (barre safari, barre kangourou, etc.), de lames de déneigement, de treuils ou d'un porte-bagages de toit
- Modifications du système de suspension du véhicule
- Installation d'appareils électroniques tels qu'un émetteur-récepteur radio ou un lecteur de CD
- Modifications à votre véhicule pour une personne aux capacités physiques réduites

Headlight aim instructions for Canadian owners (in French)

Boulons de réglage vertical

A Boulon de réglage A

B Boulon de réglage B

Avant de vérifier la portée des phares

- Assurez-vous que le réservoir de carburant du véhicule est plein et que la partie de carrosserie située autour des phares n'est pas déformée.
- Garez le véhicule sur un sol parfaitement horizontal.
- Assurez-vous que la pression de gonflage des pneus est au niveau prescrit.
- Demandez à quelqu'un de s'asseoir sur le siège du conducteur.
- Faites rebondir le véhicule à plusieurs reprises.

Réglage de la portée des phares

- 1 Tournez le boulon A vers la droite ou vers la gauche à l'aide d'un tournevis cruciforme.
Retenez le sens de rotation et le nombre de tours.

- 2 Tournez le boulon B du même nombre de tours et dans le même sens qu'à l'étape 1.

Si vous n'arrivez pas à régler vos phares en suivant cette procédure, apportez le véhicule chez votre concessionnaire Toyota afin qu'il règle la portée des phares.

shooting) 718
Alphabetical Index..... 721

What to do if... (Troubleshooting)

If you have a problem, check the following before contacting your Toyota dealer.

The doors cannot be locked, unlocked, opened or closed

You lose your keys

- If you lose your mechanical keys, new genuine mechanical keys can be made by your Toyota dealer. (→P.643)
- If you lose your electronic keys, the risk of vehicle theft increases significantly. Contact your Toyota dealer immediately. (→P.643)

The doors cannot be locked or unlocked

- Is the power switch in ON?
- Is the electronic key battery weak or depleted? (→P.592)

When locking the doors, turn the power switch off. (→P.223)

- Is the electronic key left inside the vehicle?

When locking the doors, make sure that you have the electronic key on your person.

- The function may not operate

properly due to the condition of the radio wave. (→P.177)

The rear door cannot be opened

- Is the child-protector lock set?

The rear door cannot be opened from inside the vehicle when the lock is set. Open the rear door from outside and then unlock the child-protector lock. (→P.170)

The trunk lid is closed with the electronic key left inside

- The function to prevent the electronic key from being left inside the trunk will operate and you can open the trunk as usual. Take the key out from the trunk. (→P.174)

If you think something is wrong

The fuel cell system does not start

- Did you press the power switch while firmly depressing the brake pedal? (→P.219)
- Is the electronic key anywhere detectable inside the vehicle? (→P.176)
- Is the electronic key battery weak or depleted?

In this case, the fuel cell system can be started in a temporary way. (→P.646)

- Is the 12-volt battery discharged? (→P.647)

The windows do not open or close by operating the power window switches

- Is the window lock switch pressed?

The power window except for the one at the driver's seat cannot be operated if the window lock switch is pressed. (→P.198)

The power switch is turned off automatically

- The auto power off function will be operated if the vehicle is left in ACC for a period of time. (→P.224)

A warning buzzer sounds during driving

- The seat belt reminder light is flashing

Are the driver and the front passenger wearing the seat belts? (→P.619)

- The parking brake indicator is on

Is the parking brake released? (→P.231)

Depending on the situation, other types of warning buzzer

may also sound. (→P.610, 622)

An alarm is activated and the horn sounds

- Did anyone inside the vehicle open a door during setting the alarm?

The sensor detects it and the alarm sounds. (→P.83)

Do one of the following to deactivate or stop the alarms:

- Vehicles with Toyota Teammate Advanced Drive: Unlock the doors.
- Vehicles with Toyota Teammate Advanced Drive: Unlock the trunk using the mechanical key.
- Vehicles without Toyota Teammate Advanced Drive: Unlock the doors or trunk using the entry function or wireless remote control.
- Unlock the doors.
- Turn the power switch to ACC or ON, or start the fuel cell system. (The alarm will be deactivated or stopped after a few seconds.)

A warning buzzer sounds when leaving the vehicle

- Is the message displayed on the multi-information display?

Check the message on the multi-information display. (→P.622)

A warning light turns on or a warning message is displayed

- When a warning light turns on or a warning message is displayed, refer to P.610, 622.

When a problem has occurred

If you have a flat tire

- Stop the vehicle in a safe place and repair the flat tire temporarily with the emergency tire puncture repair kit. (→P.629)

The vehicle becomes stuck

- Try the procedure for when the vehicle becomes stuck in mud, dirt, or snow. (→P.656)

Safety Connect

FCC ID: JOYCW1011

NOTE

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

FCC WARNING

Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

Co-location: This transmitter must not be co-located or operated in conjunction with any other antenna or transmitter.

CAUTION : Radio Frequency Radiation Exposure

This equipment complies with FCC radiation exposure limits set forth for an uncontrolled environment and meets the FCC radio frequency (RF) Exposure Guidelines. This equipment should be installed and operated keeping the radiator at least 20cm or more away from person's body.

FCC ID : BEJTL21BNN

This device complies with part 15 of the FCC Rules and RSS-Gen of IC Rules.

Operation is subject to the following two conditions:

- (1) This device may not cause harmful interference, and
- (2) this device must accept any interference received, including interference that may cause undesired operation.

Changes or modifications not expressly approved by the manufacturer (or party responsible) for compliance could void the user's authority to operate the equipment.

This equipment complies with FCC RF Radiation exposure limits set forth for an uncontrolled environment. This device and its antenna must not be co-located or operating in conjunction with any other antenna or transmitter. This equipment should be installed and operated with a minimum distance of 20 cm between the radiator and your body

IC : 2703H-TL21BNN

IC Radiation Exposure Statement:

This equipment complies with IC radiation exposure limits set forth for an uncontrolled environment.

This equipment should be installed and operated with minimum distance 20 cm between the radiator & your body.

Operation is subject to the following two conditions:

(1) This device may not cause interference.

(2) This device must accept any interference, including interference that may cause undesired operation of the device.

NOTE: THE MANUFACTURER IS NOT RESPONSIBLE FOR ANY RADIO OR TV INTERFERENCE CAUSED BY UNAUTHORIZED MODIFICATIONS TO THIS EQUIPMENT. SUCH MODIFICATIONS COULD VOID THE USER'S AUTHORITY TO OPERATE THE EQUIPMENT.

IC : 2703H-TL21BNN

Avis d'Industrie Canada sur l'exposition aux rayonnements

Cet appareil est conforme aux limites d'exposition aux rayonnements d'Industrie Canada pour un environnement non contrôlé.

Il doit être installé de façon à garder une distance minimale de 20 centimètres entre la source de rayonnements et votre corps.

L'exploitation est autorisée aux deux conditions suivantes :

1. L'appareil ne doit pas produire de brouillage;

2. L'appareil doit accepter tout brouillage radioélectrique subi, même si le brouillage est susceptible d'en compromettre le fonctionnement.

REMARQUE: LE FABRICANT N'EST PAS RESPONSABLE DES INTERFÉRENCES RADIOÉLECTRIQUES CAUSÉES PAR DES MODIFICATIONS NON AUTORISÉES APPORTÉES À CET APPAREIL. DE TELLES MODIFICATIONS POURRAIT ANNULER L'AUTORISATION ACCORDÉE À L'UTILISATEUR DE FAIRE FONCTIONNER L'APPAREIL.

La operación de este equipo está sujeta a las siguientes dos condiciones:
(1) es posible que este equipo o dispositivo no cause interferencia perjudicial y
(2) este equipo o dispositivo debe aceptar cualquier interferencia, incluyendo la que pueda causar su operación no deseada

► Type B

For vehicles sold in the U.S.A. and Hawaii:

FCC ID : ACJ932AT2301

NOTE:

This device complies with part 15 and part 18 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

FCC CAUTION

Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment. This equipment has been tested and found to comply with the limits for a wireless power charger, pursuant to part 18 of the FCC Rules. This equipment generates, uses and can radiate radio frequency energy and,

if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio communications, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.

This equipment complies with FCC radiation exposure limits set forth for an uncontrolled environment and meets the FCC radio frequency (RF) Exposure Guidelines. This equipment should be installed and operated keeping the radiator at least 20cm or more away from person's body.

For vehicles sold in Canada:

NOTE:

This device contains licence-exempt transmitter(s)/receiver(s) that comply with Innovation, Science and Economic Development Canada's licence-exempt RSS(s). Operation is subject to the following two conditions: (1) This device may not cause interference. (2) This device must accept any interference, including interference that may cause undesired operation of the device.

L'émetteur/récepteur exempt de licence contenu dans le présent appareil est conforme aux CNR d'Innovation, Sciences et Développement économique Canada applicables aux appareils radio exempts de licence. L'exploitation est autorisée aux deux conditions suivantes :

- 1) L'appareil ne doit pas produire de brouillage;
- 2) L'appareil doit accepter tout brouillage radioélectrique subi, même si le brouillage est susceptible d'en compromettre le fonctionnement.

CAUTION:

This equipment complies with ISED radiation exposure limits set forth for an uncontrolled environment and meets RSS-102 of the ISED radio frequency (RF) Exposure rules. This equipment should be installed and operated keeping the radiator at least 20cm or more away from person's body.

Cet équipement est conforme aux limites d'exposition aux rayonnements énoncées pour un environnement non contrôlé et respecte les règles d'exposition aux fréquences radioélectriques (RF) CNR-102 de l'ISDE.

Cet équipement doit être installé et utilisé en gardant une distance de 20 cm ou plus entre le radiateur et le corps humain.

Garage door opener

► For vehicles sold in the U.S.A. and Hawaii

This device complies with FCC rules part 15 and Innovation, Science, and Economic Development Canada RSS-210. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) This device must accept any interference that may be received including interference that may cause undesired operation. **WARNING:** The transmitter has been tested and complies with FCC and ISED rules. Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the device.

This equipment complies with FCC and ISED radiation exposure limits set forth for an uncontrolled environment. End Users must follow the specific operating instructions for satisfying RF exposure compliance. This transmitter must be at least 20 cm from the user and must not be co-located or operating in conjunction with any other antenna or transmitter.

► For vehicles sold in Canada

This device complies with FCC rules part 15 and Innovation, Science, and Economic Development Canada RSS-210. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) This device must accept any interference that may be received including interference that may cause undesired operation. WARNING: The transmitter has been tested and complies with FCC and ISDE rules. Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the device.

This equipment complies with FCC and ISDE radiation exposure limits set forth for an uncontrolled environment. End Users must follow the specific operating instructions for satisfying RF exposure compliance. This transmitter must be at least 20 cm from the user and must not be co-located or operating in conjunction with any other antenna or transmitter.

Cet appareil est conforme aux règlements de la FCC, section 15, et au CNR-210 d'Innovation, Sciences et Développement économique Canada. Le fonctionnement est assujéti aux deux conditions suivantes : (1) cet appareil ne doit pas causer d'interférences nuisibles et (2) cet appareil doit accepter toute interférence reçue, y compris celle qui pourrait entraîner un dysfonctionnement. MISE EN GARDE : L'émetteur a subi des tests et est conforme aux règlements de la FCC et d'ISDE. Les changements ou modifications non approuvés explicitement par la partie responsable de la conformité pourraient rendre caduque l'autorisation de l'utilisateur de se servir du dispositif.

Cet appareil est conforme aux limites d'exposition aux radiations de la FCC et d'ISDE établies pour un environnement non contrôlé. Les utilisateurs finaux doivent respecter les instructions d'utilisation spécifiques pour satisfaire aux exigences de conformité aux expositions de RF. L'émetteur doit se trouver à 20 cm au minimum de l'utilisateur et ne doit pas être situé au même endroit que tout autre émetteur ou antenne ni fonctionner avec un autre émetteur ou antenne.

Tires
